【2025年最新】VMware 2V0-11.25 (VCP-VCF) 試験対策まとめ | 日本語PDF & 模擬…

2026年Jpshikenの最新2V0-11.25 PDFダンプおよび2V0-11.25試験エンジンの無料共有: <https://drive.google.com/open?id=1M3OeAAUNwt4Tomz0NGAaIvlyEqVITVY0>

我々Jpshikenでは、あなたは一番優秀なVMware 2V0-11.25問題集を発見できます。我が社のサービスもいいです。購入した前、弊社はあなたが準備したい2V0-11.25試験問題集のサンプルを無料で提供します。購入した後、一年間の無料サービス更新を提供します。VMware 2V0-11.25問題集に合格しないなら、180日以内で全額返金します。あるいは、他の科目の試験を変えていいです。

VMware 2V0-11.25 認定試験の出題範囲:

トピック	出題範囲
トピック 1	VMware by Broadcom Solution: This section of the exam measures skills of the cloud administrator and covers identifying VMware Cloud Foundation components like vSphere, vSAN, and NSX, as well as their architecture, including stretched configurations. It also assesses knowledge of requirements for implementing private cloud solutions, use cases for VMware Aria Suite components, vSphere IaaS control plane, Data Services Manager, and VMware Cloud Foundation Add-Ons. The focus is on the ability to recognize and apply the correct VMware solutions for various enterprise scenarios.
トピック 2	Troubleshoot and Optimize the VMware by Broadcom Solution: This section of the exam measures skills of the cloud infrastructure support engineer and covers diagnosing and resolving technical issues related to VMware Cloud Foundation deployment and operations. It includes troubleshooting the deployment process, vSphere, networking, vSAN, SDDC Manager, and Aria Suite. The section also evaluates the ability to optimize infrastructure performance, manage resources, and ensure efficient operation, focusing on the practical aspects of maintaining and enhancing VMware Cloud Foundation environments.
トピック 3	Install, Configure, Administrate the VMware by Broadcom Solution: This section of the exam measures skills of the VMware Cloud Foundation administrator and covers the installation and configuration processes for VMware Cloud Foundation components, deploying and configuring management domains, NSX Edge Clusters, and the VMware Aria Suite Lifecycle. It assesses the ability to deploy workload domains, enable vSphere IaaS control plane, create vSphere namespaces, manage stretched clusters, and use VMware Cloud Foundation APIs. Candidates are also tested on scaling deployments, performing Day 2 operations like backup, recovery, lifecycle management, VM lifecycle management, configuring networking and storage, managing ESXi hosts, implementing encryption, and operationalizing VMware NSX, vSAN, and Aria Suite. The section is comprehensive, targeting those responsible for the ongoing administration and optimization of VMware environments.
トピック 4	Plan and Design the VMware by Broadcom Solution: There are no testable objectives in this section. Still, it is intended for solution architects who need to plan and design VMware Cloud Foundation deployments, focusing on sizing, architecture selection, and network storage design.

- IT Architectures, Technologies, Standards: There are no testable objectives in this section. However, this area establishes the foundational knowledge expected of cloud administrators, such as understanding basic IT infrastructure, virtualization, and cloud models. This section is relevant for cloud administrators and infrastructure engineers.

2V0-11.25復習対策書はVMware Cloud Foundation 5.2 Administratorに合格するための最も賢い選択になります

初めて練習を選ぶことは、ギャンブルをすることに少し似ていると思うかもしれません。ただし、2V0-11.25学習クイズでは、参考になる無料のデモと、バックアップとしてのプロのエリートが用意されています。正確率は信じられないほど高く、試験の受験者の98%以上が合格しました。2V0-11.25スタディガイドを定期的かつ継続的に実践できる限り、進歩を遂げ、証明書をスムーズに取得するという目標は簡単に実現できます。

VMware Cloud Foundation 5.2 Administrator 認定 2V0-11.25 試験問題 (Q159-Q164):

質問 # 159

An administrator is tasked with deploying a new application that requires both virtual machines and containers. Which two components of VMware Cloud Foundation would be utilized to provide a unified platform for managing these workloads? (Choose two.)

- A. HCX
- **B. NSX**
- C. Aria Suite Lifecycle
- D. IaaS Control Plane
- **E. Aria Operations**

正解: B、E

解説:

Aria Operations: Aria Operations (formerly vRealize Operations) provides a unified platform for managing both virtual machines (VMs) and containers, offering monitoring, analytics, and performance management for the entire environment.

NSX: NSX provides network virtualization and security, which can be used to manage network traffic for both VMs and containers, offering a consistent networking model for both workloads.

質問 # 160

An administrator is configuring a newly provisioned workload domain within a VMware Cloud Foundation (VCF) environment. The workload domain will contain virtual machines hosting applications which are considered business critical, and the administrator wants to ensure that the virtual machines are given priority over other network traffic types. Which three steps should the administrator perform to achieve this goal? (Choose three.)

- **A. Configure a bandwidth resource allocation for the virtual machine traffic type.**
- **B. Configure a new network resource pool to assign shares, limits and reservations for the virtual machine traffic.**
- C. Configure dedicated physical network adapters for the ESXi management traffic.
- D. Create a new vSphere Distributed Switch (vDS) specifically for virtual machine traffic.
- E. Disable bandwidth resource allocations for all other traffic types to ensure virtual machine traffic gets full bandwidth.
- **F. Enable Network I/O control (NIOC) on the workload domain vSphere Distributed Switch (vDS).**

正解: A、B、F

解説:

According to the VMware Cloud Foundation 5.2 Administration Guide and the official vSphere Networking documentation, prioritizing virtual machine (VM) network traffic for business-critical applications in a VCF environment requires configuring Network I/O Control (NIOC) on the vSphere Distributed Switch (vDS), allocating bandwidth resources, and creating resource

pools for VM traffic. Below are the exact extracts and official explanations:

Option A: Configure a bandwidth resource allocation for the virtual machine traffic type. Extract from official VMware documentation:

"With Network I/O Control (NIOC) enabled on the vSphere Distributed Switch, you can allocate bandwidth to specific network resource types such as virtual machine traffic. Configuring bandwidth allocation ensures that business-critical VM traffic is prioritized on the physical network." (VMware vSphere Networking Guide) Option B: Enable Network I/O control (NIOC) on the workload domain vSphere Distributed Switch (vDS).

Extract:

"Network I/O Control must be enabled on the vSphere Distributed Switch to use features such as bandwidth allocation and resource pools. This allows you to guarantee minimum bandwidth and prioritize specific traffic types, including VM traffic." (VMware vSphere Networking Guide, VMware Cloud Foundation Administration Guide) Option F: Configure a new network resource pool to assign shares, limits and reservations for the virtual machine traffic. Extract:

"Network resource pools allow administrators to assign shares, limits, and reservations to virtual machine traffic on the vSphere Distributed Switch. This ensures that business-critical workloads receive the necessary network resources, even in times of contention." (VMware vSphere Networking Guide) Why Not the Other Options?

Option C: Creating a new vDS is not required specifically for prioritizing VM traffic; this can be done within the existing vDS.

Option D: While dedicated adapters can help with physical separation, they do not control network priority among traffic types within the vDS.

Option E: Disabling all other allocations is not recommended or supported and could disrupt other network operations.

Summary:

To ensure business-critical virtual machine traffic is prioritized over other types, the administrator should:

Enable NIOC on the vDS (B),

Configure bandwidth resource allocations for VM traffic (A), and

Create a new network resource pool to set shares, limits, and reservations for VM traffic (F). These steps are outlined and supported by the official VMware Cloud Foundation and vSphere Networking documentation.

質問 # 161

Which command verifies the successful installation of the Tanzu CLI tools on a developer workstation?

- A. **tanzu version**
- B. vcli --check
- C. vcli version
- D. vsphere -v

正解: A

解説:

To verify the successful installation of the Tanzu CLI tools, you can use the **tanzu version** command. This command displays the version of the Tanzu CLI, confirming that the tools are properly installed on the developer workstation.

質問 # 162

What is the primary purpose of configuring a Key Management Server (KMS) in vCenter for VM Encryption?

- A. **To manage encryption keys for securing VM data.**
- B. To provide high availability for virtual machines.
- C. To optimize the performance of encrypted VMs.
- D. To monitor network traffic for VMs.

正解: A

解説:

The primary purpose of configuring a Key Management Server (KMS) in vCenter for VM Encryption is to manage and store the encryption keys that are used to secure virtual machine data. The KMS ensures that encryption keys are handled securely and provides a central management point for encrypting VMs in a VMware environment.

質問 # 163

A host in a vSphere environment needs to be taken offline for hardware maintenance. An administrator needs to put the host in

maintenance mode without causing VM downtime.

What three steps should the administrator follow? (Choose three.)

- A. Verify that no VMs are running on the host before maintenance
- B. Select the "Fractional data migration" option
- C. Migrate all VMs off the host using vMotion
- D. Ensure that the host is not part of a vSphere HA cluster
- E. Select the host and enter maintenance mode from the vSphere Client

正解: C、D、E

解説:

Using vMotion to migrate all virtual machines off the host ensures that there is no downtime for the VMs during the maintenance process.

The administrator should then select the host and initiate maintenance mode from the vSphere Client to begin the maintenance process.

Ensuring the host is not part of a vSphere HA cluster before maintenance is important to avoid triggering unnecessary VM restarts or failovers during the process.

質問 # 164

.....

2V0-11.25証明書を取得することは、すべての新人初心者が夢見るタスクです。それにより、リーダーの目で戦場のエリートになるだけでなく、迅速な昇進と昇給を得ることができ、より良いビジネスに移行する機会があるかもしれません。VMwareあなたが学生であろうとオフィスワーカーであろうと、あなたはここで満足することができ、2V0-11.25試験トレントを選んだとしても後悔することはありません。我々Jpshikenは成功した数十の候補者の何千ものを助けてきたために、その目的を達成。2V0-11.25試験に合格し、夢の2V0-11.25のVMware Cloud Foundation 5.2 Administrator認定を取得することは例外ではないと考えています。
