

# NS0-094 Test Passing Score - NS0-094 Reliable Practice Materials

The Network Appliance NS0-094 certification exam is an industrial-recognized NetApp Hardware Support Engineer Professional Exam (NS0-094) certificate that is designed to validate candidates' skills, experience, and knowledge quickly. The NetApp Hardware Support Engineer Professional Exam (NS0-094) certification exam has been inspiring Network Appliance professionals since its beginning. Now this NS0-094 certification exam has become solid proof of certain skills set and knowledge.

## Network Appliance NS0-094 Exam Syllabus Topics:

| Section                        | Objectives                                                                                                                                                                                                                                                                                                   |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Troubleshooting NetApp systems | <ul style="list-style-type: none"><li>- Diagnostics and analysis<ul style="list-style-type: none"><li>• 1. ## 100% Pass 2026 NS0-094: NetApp Hardware Support Engineer Professional Exam –Trustable Test Passing Score

You should keep in mind that passing the NS0-094 certification exam is not an easy task. It is a challenging job. If you want to pass the NS0-094 exam then you have to put in some extra effort, time, and investment then you will be confident to pass the NetApp Hardware Support Engineer Professional Exam (NS0-094) exam. With the complete and comprehensive NS0-094 exam dumps preparation you can pass the NetApp Hardware Support Engineer Professional Exam (NS0-094) exam with good scores. The ExamCost NS0-094 Questions can be helpful in this regard. You must try this.

## Network Appliance NetApp Hardware Support Engineer Professional Exam Sample Questions (Q76-Q81):

### NEW QUESTION # 76

While performing a health check on a cluster, you notice the following entries in the cluster event log:

```
Thu Jun 18 12:12:09 PDT [nodeA2: disk_server_0: disk.ioMediumError:notice]:
Medium error on disk 0b.64.18L2: op
0x88:00000003c1ce73d8:00000200 sector 16136434984 SCST: medium error -
Unrecovered read error - If the disk is in a RAID group, the subsystem will
attempt to reconstruct unreadable data (3 11 ff 0) (6955) Disk 0b.64.18L2
Shelf 64 Bay 18 [NETAPP X381_HLBRE10TSDB NA01]
S/N [7PGVHKSG] UID [5000CCA2:51CC0C1B:00000000: 00000000: 00000000: 00000000:
00000000: 00000000: 00000000: 00000000]
```

Referring to the exhibit, which of the following actions do you take?

- A. Use diskcopy to copy the disk to a working spare.
- B. Reseat the disk.
- C. Review the current firmware and known issues.
- D. Sanitize the disk.

**Answer: C**

Explanation:

Analyzing the Error in the Event Log:

The log entry indicates a medium error on a disk, suggesting an unrecoverable read issue. While the RAID subsystem attempts to reconstruct unreadable data, this error might indicate a firmware issue or a compatibility problem with the disk.

Why Reviewing Firmware and Known Issues Is Important:

Medium errors can sometimes result from outdated or incompatible firmware.

By reviewing firmware release notes and known issues for the disk model (NETAPP X381\_HLBRE10TSDB in this case), you can identify if this is a known issue and resolve it by updating the firmware.

### NEW QUESTION # 77

Which two tools can you use to invoke AutoSupport? (Choose two.)

- A. the NetApp Active IQ website
- B. NetApp Cloud Insights
- C. CLI
- D. the SmartSolve tool

**Answer: A,C**

Explanation:

To invoke AutoSupport in ONTAP, the following tools can be used:

1. CLI (Command Line Interface)

How to use:

Run the command:

python

Copy code

autosupport invoke -node <nodename> -type all

This triggers AutoSupport to collect and send logs and system information.

2. NetApp Active IQ website

How to use:

Log in to the Active IQ portal and use its interface to request an AutoSupport message from the connected ONTAP systems.

### NEW QUESTION # 78

EMS reports "HA GROUP ERROR: DISK/SHELF COUNT MISMATCH." The ADP configured disks are distributed separately to two nodes.

```
broken disks
LUN Disk      Device      HA SHELF BAY  CHAN Pool Type RPM   Used (MB/blks)  Phys (MB/blks)
-----
not responding 0b.00.18P1 0b 0 18      SA:A 0      SAS  10000 1689530/3460157952 1689538/3460174336 (fast zeroed)

nodeB:
Aggregate nodeB_aggr0 (online, raid_dp, fast zeroed) (block checksums)
plex /nodeB_aggr0/plex0 (online, normal, active, pool0)
LUN group /nodeB_aggr0/plex0/rg0 (normal, block checksums)
LUN Disk Device      HA SHELF BAY  CHAN Pool Type RPM   Used (MB/blks)  Phys (MB/blks)
-----
data      0b.00.12P2 0b 0 12      SA:B 0      SAS  10000 23956/49062912 23964/49079296 (fast zeroed)
data      0b.00.16P2 0b 0 16      SA:B 0      SAS  10000 23956/49062912 23964/49079296 (fast zeroed)
data      0b.00.18P2 0b 0 18      SA:B 0      SAS  10000 23956/49062912 23964/49079296 (fast zeroed)
```

What is the cause of this issue?

- A. The disk in bay 18 is broken.
- B. The cabling to the NetApp NS224 shelf is incorrect.
- C. There is a disk firmware mismatch between the two nodes.
- **D. The failed disk information is not synchronized between both nodes.**

**Answer: D**

Explanation:

The output shows ADP partitions from the same physical disk being reported differently by the two nodes. This indicates that failed disk state information is not synchronized between the HA partners, causing the disk/shelf count mismatch alert.

### NEW QUESTION # 79

An engineer needs to replace a failed NVMe SSD in an AFF system. Which handling practice is MOST important?

- A. Reboot both controllers before touching the drive
- **B. Use ESD protection during handling and installation**
- C. Disable AutoSupport permanently
- D. Avoid anti-static precautions to speed replacement

**Answer: B**

Explanation:

NVMe SSDs are sensitive electronic components vulnerable to electrostatic discharge damage.

Proper ESD protection procedures are essential during handling and replacement. Controller reboots are generally unnecessary for hot-swappable drives. AutoSupport configuration does not affect safe hardware handling practices.

### NEW QUESTION # 80

After an unscheduled power outage, the storage system must be brought back online. What is the correct sequence of steps to power on and boot the system?

- A. controllers -> shelves -> switches
- B. switches -> controllers -> shelves
- **C. switches -> shelves -> controllers**
- D. shelves -> controllers -> switches

**Answer: C**

Explanation:

After a complete power outage, the correct startup order is to power on the switches first, then the disk shelves, and finally the controllers. This ensures that network connectivity and storage paths are fully available before the controllers boot.

### NEW QUESTION # 81

• • • • •

In order to save a lot of unnecessary trouble to users, we have completed our NS0-094 Learning Materials research and development of online learning platform, users do not need to download and install, only need your digital devices have a browser, can be done online operation of the NS0-094 study materials. This kind of learning method is very convenient for the user, especially in the time of our fast pace to get Network Appliance certification. In addition, our test data is completely free of user's computer memory, will only consume a small amount of running memory when the user is using our product.
