Reliable 101-500 Dumps Sheet, Valid 101-500 Exam Discount

In the workplace of today, a variety of training materials and tools always makes you confused and spend much extra time to test its quality, which in turn wastes your time in learning. In fact, you can totally believe in our 101-500 test questions for us 100% guarantee you pass 101-500 exam. And you can enjoy free updates for one year after buying our 101-500 Test Questions, you will also get a free trial before you buy our 101-500 exam questions. The advantages of the 101-500 exam dumps are more than you can count, just buy our 101-500 learning guide!

Lpi LPIC-1 Exam 101, Part 1 of 2, version 5.0 Sample Questions (Q17-Q22):

NEW QUESTION # 17
Which of the following partition types is used for Linux swap spaces when partitioning hard disk drives?

- A. 8e
- B. 0
- C. fd
- D. 1
- E. 2

Answer: B

NEW QUESTION # 18

Which of the following commands changes all occurrences of the word "bob" in file data to "Bob" and prints the result to standard output?

- A. sed's/bob,Bob/' data
- B. sed'/bob/Bob/' data
- C. sed's/bob/Bob/g' data
- D. sed's/bob/Bob/' data
- E. sed'/bob/Bob' data

Answer: C

Explanation:
The sed command is used to perform various text processing tasks on a file or a stream. The s command is used to substitute a pattern with a replacement. The g flag is used to replace all occurrences of the pattern in a line. The / character is used to separate the pattern, the replacement, and the flags. Therefore, the command sed 's/bob/Bob/g' data will change all occurrences of the word "bob" in file data to "Bob" and print the result to standard output. The other commands are incorrect because they either use the wrong syntax or do not replace all occurrences of the word "bob".

NEW QUESTION # 19

You have just added a CD-ROM drive (/dev/hdd) to your system and have added it to your fstab.
Typically you can use which of the following commands to mount media in that drive to
/mnt/cdrom?

- A. automount/mnt/hdd/mnt/cdrom
- B. mount/dev/cdrom/mnt/cdrom
- C. mount/dev/cdrom
- D. mount -t cdrom/dev/cdrom/mnt/cdrom
- E. mount/mnt/cdrom

Answer: E

NEW QUESTION # 20

Which of the following commands redirects the output of ls to standard error?

- A. ls >&2
- B. ls |error
- C. ls <<ERR
- D. ls >>2
- E. ls >-1

Answer: A

Explanation:
Explanation
This command redirects the output of ls to standard error, which is file descriptor 2 by default. The syntax of the command is:
ls >& file_descriptor
The ls command is a utility that lists the files and directories in the current working directory or a specified directory. The >& symbol is a redirection operator that redirects the standard output of a command to another file descriptor, which can be a file, a device, or another stream. The file_descriptor is the number of the file descriptor to which the output is redirected.
Therefore, the command ls >&2 will run the ls command and redirect its output to file descriptor 2, which is standard error. This means that the output of ls will not be displayed on the screen, but sent to the standard error stream, which can be used for error handling or logging purposes.
The other commands are incorrect for the following reasons:
* A, ls >-1: This command will not redirect the output of ls to standard error, but it will cause an error.

The > symbol is a redirection operator that redirects the standard output of a command to a file or device, overwriting any existing content. The -1 argument is not a valid file name or device name, and it will cause the shell to report an error and exit.
* B, ls <<ERR: This command will not redirect the output of ls to standard error, but it will use a here document as the standard input of ls. The << symbol is a redirection operator that redirects the standard input of a command from a here document, which is a block of text that follows the command. The ERR argument is the delimiter that marks the end of the here document. However, the ls command does not read from the standard input, and it will ignore the here document. The command will display the files and directories in the current working directory on the screen, as usual.
* D, ls >>2: This command will not redirect the output of ls to standard error, but it will append the output of ls to a file named 2. The >> symbol is a redirection operator that redirects the standard output of a command to a file or device, appending to any existing content. The 2 argument is the name of the file to which the output is appended. If the file does not exist, it will be created. The command will not display anything on the screen, but write the output of ls to the file 2.
* E, ls |error: This command will not redirect the output of ls to standard error, but it will pipe the output of ls to another command named error. The | symbol is a pipe operator that redirects the standard output of one command to the standard input of another command. The error argument is the name of the command that receives the output of ls as its input. However, there is no such command named error in the Linux system, and the shell will report an error and exit.

NEW QUESTION # 21
Which of the following vi commands deletes two lines, the current and the following line?

- A. 2dd
- B. d2
- C. 2d
- D. dd2
- E. de12

Answer: A

NEW QUESTION # 22
