## 최신 SAP Certified Associate C\_ACDET\_2506 무료샘플문제 (Q31-Q36):

### 질문 # 31

How can you set the order of your custom Contract Workspace fields? Note: There are 2 correct answers to this question.

- A. The fields are presented in alphabetical order of the field label. By carefully choosing the
- B. Select Field Configuration and under the advanced tab select property Sequence. Fields are sorted by this field in the UL. Once all changes are performed, publish all changes via Customizing Publish.
- C. Navigate to the UI where the class is presented, select Customize in the banner, select Edit, and drag and drop the fields in the order they should be presented. Once all changes are performed, publish all changes via Customizing → Publish
- D. Select Field Configuration, find the class, and select the Layout tab. Here you can drag and drop the order of the fields. Once all changes are performed, publish all changes via Customizing Publish.

정답: C,D

### 질문 # 32

What actions can typically be performed on existing fields? Note: There are 3 correct answers to this question.

- A. Add a Visibility, Editability, or Validity Condition
- B. Change the help tip
- C. Change the field type
- D. Change the internal name
- E. Make the field mandatory

정답: A,B,E

### 질문 # 33

During a Bluefield migration, you discover missing flex master data templates. What do you do?

- A. Defer to post-go-live
- B. Use reporting workaround
- C. Ignore them
- D. Rebuild them manually in production

정답: D

### 질문 # 34

Which scenarios are applicable when moving templates from the test site to the production site by ICM? Note: There are 2 correct answers to this question.

- A. Published templates with flex master data references in the test site are migrated to the production site during the first migration attempt.
- B. New templates that successfully migrated to the production site are in Draft state.
- C. Batch imports are available for templates when migrating configuration bundles.
- D. Draft templates on the source site are skipped.

정답: C,D

### 질문 # 35

What should you do to proceed without errors? While migrating form templates, you successfully exported all templates from the Test site. However, when trying to import them into Production, you cannot.

- A. Modify the form template files locally to bypass folder restrictions.
- B. Manually create the required folder in the Production site before importing.
- C. Upload the templates to any existing folder regardless of its purpose.
- D. Skip the import and inform the team the templates cannot be migrated.

정답: B

#### 설명:

When migrating form templates between SAP Ariba environments, the folder structure in the target environment must exactly match the folder referenced in the template metadata. The export includes metadata about the folder path where the template resides. If the corresponding folder does not exist in the Production site, the import process will fail.

The correct procedure is to manually create the required folder in Production before importing the templates to ensure the folder metadata aligns perfectly.

Uploading templates to arbitrary folders or modifying template files locally to alter metadata is unsupported and can corrupt the package or cause errors.

Skipping the import unnecessarily halts progress and ignores SAP's structured migration approach.

SAP Ariba documentation on template migration and folder management strongly recommends maintaining folder parity between source and target systems to prevent import failures.

This practice helps maintain organized template management and ensures consistent deployment workflows.
