Exam AD0-E725 Success, AD0-E725 Exam Collection Pdf

I am glad to introduce a secret weapon for all of the candidates to pass the exam as well as get the related certification without any more ado-- our AD0-E725 study materials. You can only get the most useful and efficient study materials with the most affordable price. With our AD0-E725 practice test, you only need to spend 20 to 30 hours in preparation since there are all essence contents in our AD0-E725 Study Materials. What's more, if you need any after service help on our AD0-E725 exam guide, our after service staffs will always offer the most thoughtful service for you.

Adobe AD0-E725 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• External Integrations: This section of the exam measures the skills of Integration Specialists and focuses on connecting Adobe Commerce with external SaaS services. It encompasses the skills needed to customize data flows, utilize Adobe App Builder for extensibility, and implement Adobe I• O events and webhooks to create automated and connected business processes.
Topic 2	<ul style="list-style-type: none">• Customizations: This section of the exam measures the skills of Solutions Engineers and involves modifying and extending platform functionality. This includes customizing core areas like the product catalog, checkout process, and admin panel, as well as manipulating data entities, customizing APIs, working with message queues, and writing integration tests to ensure code quality and functionality.

Topic 3	<ul style="list-style-type: none"> Section 1: Architecture: This section of the exam measures the skills of Backend Developers and covers the core structural concepts of Adobe Commerce. It involves demonstrating effective cache implementation, understanding key code components like plugins and observers, and managing multi-site configurations on a single instance. The domain also includes explaining the use of Git patches, critical security features, the CRON scheduling system, and how indexing functions within the platform.
Topic 4	<ul style="list-style-type: none"> Cloud: This section of the exam measures the skills of Cloud Architects and covers the deployment and management of Adobe Commerce on cloud infrastructure. It requires explaining the fundamental cloud architecture, performing setup and configuration tasks, and utilizing the Adobe Commerce Cloud CLI tool to manage the environment effectively.

Adobe Commerce Developer Expert Sample Questions (Q12-Q17):

NEW QUESTION # 12

A client recently started using the new Adobe Live Search functionality. They report an issue with content from the website, such as CMS blocks, not returning with the search result.

A Developer is asked to investigate because the client wants this content to be part of the data pool of Live Search. How should the Developer respond to the client?

- A. Advise the client to enable content for Live Search from the admin panel.
- B. Extend the class `Magento\LiveSearchAdapter\Model\Attribute\Metadata`.
- C. Share documentation regarding the limitations of Live Search.

Answer: C

Explanation:

Adobe Live Search is designed to handle catalog product data only. It does not index or return CMS content such as blocks or pages. This is a known limitation of Live Search.

B is invalid because there is no admin setting to enable CMS content in Live Search.

C is not a supported solution; extending Live Search classes will not include CMS content.

NEW QUESTION # 13

A customer wants to create a set of CMS blocks to be used on their website but does not wish to create these manually. An Adobe Commerce Developer is tasked to install the CMS blocks programmatically.

How should the Developer achieve this?

- A. Implement the `InstallSchemaInterface`, then use the block repository in the `execute()` function to create the blocks.
- B. Implement the `SchemaSetupInterface`, then use the block repository in the `apply()` function to create the blocks.
- C. Implement the `DataPatchInterface`, then use the block repository in the `apply()` function to create the blocks.

Answer: C

Explanation:

The correct approach for creating CMS blocks programmatically is to use a Data Patch (`DataPatchInterface`).

Data Patches are used for creating or modifying data programmatically (e.g., CMS blocks, CMS pages, configuration values).

`InstallSchemaInterface` (B) and `SchemaSetupInterface` (C) are used for modifying database schema, not data.

Adobe Commerce DevDocs - Data patches

NEW QUESTION # 14

A recent client-reported bug is fixed by the Adobe Commerce community. The Adobe engineering team has not yet released the patch or committed the bug fix to GitHub. A Developer acquires the custom patch and releases it to their Adobe Commerce environments.

What are the recommended steps the Developer should follow to implement the custom patch for the bug fix?

- A. Install the cweagans/composer-patches module and edit the composer.json file to apply the custom patch.
- B. Install only official patches supplied by them to maintain upgradability.
- C. Update the quality-patches module and list the required patch in the magento-ce-patch.yaml file.

Answer: A

Explanation:

If a bug fix patch has not yet been officially released by Adobe (via Quality Patches Tool (QPT)), developers can apply custom patches using the cweagans/composer-patches package.

Option A is best practice in general, but in urgent scenarios, custom patches are allowed.

Option B applies only for official Adobe patches distributed via QPT, not for community-supplied or custom fixes.

Option C is correct: cweagans/composer-patches allows applying custom patches via composer.json until an official fix is available.

Adobe Commerce DevDocs - Apply custom patches

NEW QUESTION # 15

A Developer is tasked with creating a new index. The custom indexer is not automatically updating the product data. How should the Developer solve this issue?

- A. Use the mview to allow tracking database changes.
- B. Use an event observer to monitor data changes.
- C. Implement custom database triggers.

Answer: A

NEW QUESTION # 16

An Adobe Commerce Developer creates a module that adds a product attribute via a data patch.

Adhering to best practices, how should the Developer remove this product attribute when the module is uninstalled?

- A. Delete the custom attribute directly from the database.
- B. Make the patch implement Magento\Framework\Setup\Patch\PatchRevertableInterface with the revert() method in it.
- C. Create a new CLI command that needs to be executed before the bin/magento module:uninstall Vendor_ModuleName.

Answer: B

Explanation:

The recommended best practice is to use the PatchRevertableInterface when creating data patches. This interface defines a revert() method, which is executed during module uninstall, ensuring that added entities (such as product attributes) are properly removed.

B (deleting from database directly) is strongly discouraged and violates upgrade safety.

C (creating a CLI command) is unnecessary; uninstallation should be handled within the patch itself.
