Taking practice exams teaches you time management so you can pass the Emergency Medical Technicians Exam (EMT) exam. Itcertkey's EMT practice exam makes an image of a real-based examination which is helpful for you to not feel much pressure when you are giving the final examination. You can give unlimited practice tests and improve yourself daily to achieve your desired destination.

## There are advantages of Getting the Test Prep EMT Exam Certification

- Benefits generally include medical, dental, and vision insurance, as well as vacation, sick leave, and retirement plans.
- Emergency medical technicians who work for the fire department or the police generally enjoy the same benefits as the fire department or the police.

## How can you ready for Emergency Medical Technicians (EMT) Exam

For Emergency Medical Technicians (EMT) Exam, there is a study guide

Emergency Medical Technicians (EMT): Get our quick guide if you don't have time to read all the page.

The National Registry of Emergency Medical Technicians, or NREMT, is a nonprofit organization that helps maintain the skills, knowledge, and abilities of Emergency Medical Technicians (EMTs) in the United States. Although you probably know the

important role EMUs play in our society, you may not be familiar with the proof required to become an emergency medical technician. NREMT manages a wide range of professional emergency medical tests, including First Aid, First Aid (EMR), First Aid Technicians (EMT), Advanced First Aid Technicians (AEMT), EMT -Intermediate / 99 (EMT- I / 99) and paramedics. Although the exams vary by type of emergency responder, they cover all the general knowledge and skills necessary to provide emergency medical services. In this guide, we'll cover everything you need to know about the EMT exam, including study tips, test content, scoring, the best NREMT practice exam, and much more.

## There are Candidates must know the topics before they start of preparation.

Our **Test Prep EMT exam dumps** will include the following topics:

- EMS Operations 12%
- Trauma 21%
- Airway, Respiration, and Ventilation 20%
- Medical / Obstetrics / Gynecology 28%
- Cardiology and Resuscitation 19%

## **NREMT EMT Exam | EMT Valid Test Pdf - Fast Download of EMT Training Kit**

The EMT study guide provided by the Itcertkey is available, affordable, updated and of best quality to help you overcome difficulties in the actual test. We continue to update our dumps in accord with EMT real exam by checking the updated information every day. The contents of EMT Free Download Pdf will cover the 99% important points in your actual test. In case you fail on the first try of your exam with our EMT free practice torrent, we will give you a full refund on your purchase.

## **NREMT Emergency Medical Technicians Exam Sample Questions (Q15-Q20):**

### **NEW QUESTION # 15**

At which of the following anatomic locations can wound packing be performed to stop bleeding? Select the three answer options that are correct.

- A. Left hip
- B. Left shoulder
- C. Right temple
- D. Left axilla
- E. Right forearm
- F. Right upper abdominal quadrant

**Answer: A,B,D**

**Explanation:**

NREMT hemorrhage-control education emphasizes wound packing for severe external bleeding that cannot be controlled with direct pressure or a tourniquet, particularly in junctional areas. Junctional areas are regions where tourniquets are ineffective due to proximity to the torso.

Option B (Left axilla) is correct. The axilla is a classic junctional site where major vessels are present and tourniquets cannot be applied effectively.

Option A (Left hip) is correct because wounds near the inguinal region are considered junctional and are appropriate for wound packing.

Option C (Left shoulder) is also considered a junctional area where wound packing may be used if bleeding is severe and not amenable to tourniquet placement.

Option D (Right temple) is incorrect because wound packing is contraindicated in the skull.

Option E (Right forearm) is incorrect because tourniquets are preferred on extremities.

Option F (Right upper abdominal quadrant) is incorrect because wound packing is not performed in the abdominal cavity.

NREMT stresses early hemorrhage control as a top trauma priority due to preventable death from bleeding.

### NEW QUESTION # 16

A 58-year-old patient reports chest pain and difficulty breathing after missing their last three hemodialysis treatments. Which of the following signs and symptoms should the EMT suspect to find?

- A. Fever
- B. Crackles
- C. Bradycardia
- D. Hypotension

#### Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Missing dialysis leads to fluid overload, causing:

- \* Pulmonary edema, evident by crackles on auscultation
- \* Dyspnea and chest discomfort

Bradycardia is less likely; patients more often present with tachycardia due to volume stress. Fever would suggest infection (not stated here), and hypotension can occur later, but hypertension is more common in early fluid overload.

### NEW QUESTION # 17

A 43-year-old patient is experiencing a sudden onset of coughing, nausea, and shortness of breath. The patient has a history of alcohol use disorder and major depressive disorder. The patient spent the day cleaning. The kitchen has food in various forms of decay. The patient's condition improves slightly once oxygen has been administered. Which of the following environmental factors is the most likely cause of the patient's presentation?

- A. Mold exposure
- B. Chemical inhalation
- C. Alcohol intoxication
- D. Food poisoning

#### Answer: B

Explanation:

Comprehensive and Detailed Explanation (Based on NREMT standards):

Sudden respiratory symptoms following prolonged cleaning strongly suggest chemical inhalation, particularly from cleaning agents such as ammonia or bleach. Mixing chemicals or using them in poorly ventilated areas can release toxic gases that cause coughing, nausea, and dyspnea.

Option D is correct because inhaled chemical irritants commonly cause acute respiratory distress that improves with oxygen therapy.

Option A typically causes chronic symptoms, not sudden onset.

Option B does not cause respiratory distress.

Option C does not explain the environmental exposure or oxygen response.

NREMT emphasizes recognizing environmental hazards and removing patients from the source while providing supportive care.

### NEW QUESTION # 18

A 65-year-old patient with a history of angina reports chest pain and shortness of breath after playing golf. The patient stated the pain began one hour ago and has not stopped with rest. The vital signs are BP 86/64, P 112, R 22, and SpO<sub>2</sub> 89% on room air. Which of the following actions should the EMT do next?

- A. Obtain a 12-lead ECG
- B. Give nitroglycerin
- C. Administer CPAP
- D. Provide nebulized albuterol

#### Answer: A

#### Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

This is a high-risk cardiac event due to unstable angina or possible myocardial infarction. The EMT should:

- \* Administer oxygen if SpO<sub>2</sub> is <94%
- \* Avoid nitroglycerin if systolic BP is <90 mmHg
- \* Obtain a 12-lead ECG to identify ST-elevation MI (STEMI) and transmit it if trained and authorized CPAP is indicated for pulmonary edema, and albuterol is for bronchospasm, neither of which applies here.

### NEW QUESTION # 19

A 3-year-old female choked while eating a hot dog and then became unresponsive. You should first

- A. Check her carotid pulse
- B. Deliver two rescue breaths
- **C. Begin chest compressions**
- D. Perform a head tilt-chin lift maneuver

#### Answer: C

#### Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

According to Pediatric Basic Life Support (PALS) guidelines by the American Heart Association (AHA), when a child becomes unresponsive due to foreign body airway obstruction (FBAO), the immediate next step is to begin chest compressions. This is done before checking the airway or giving breaths because the airway is presumed obstructed. The compressions may dislodge the object.

After 30 compressions, open the airway and check for visible objects. If none are seen, attempt rescue breaths.

This protocol reflects the high risk of complete airway blockage in children with sudden collapse following a choking episode.

### NEW QUESTION # 20

.....

As the unprecedented intensity of talents comes in great numbers, what abilities should a talent of modern time possess and finally walk to the success? Well, of course it is EMT exam qualification certification that gives you capital of standing in society. Our EMT preparation materials display a brand-new learning model and a comprehensive knowledge structure on our official exam bank, which aims at improving your technical skills and creating your value to your future. You will be bound to pass the EMT Exam with our advanced EMT exam questions.
