Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator Sample Questions (Q55-Q60):

NEW QUESTION # 55

Which two advantages does FortiSASE bring to businesses with microbranch offices that have FortiAP deployed for unmanaged devices? (Choose two.)

- A. It secures internet access both on and off the network.
- B. It uses zero trust network access (ZTNA) tags to perform device compliance checks.
- C. It simplifies management and provisioning.
- D. It eliminates the requirement for an on-premises firewall.

Answer: A,C

Explanation:
FortiSASE extends secure internet access to users regardless of their location and streamlines the management and provisioning of security policies and services for microbranch offices with unmanaged devices.

NEW QUESTION # 56
Refer to the exhibits.
WiMO-Pro and Win7-Pro are endpoints from the same remote location. WiMO-Pro can access the internet though FortiSASE, while Wm7-Pro can no longer access the internet Given the exhibits, which reason explains the outage on Wm7-Pro?

- A. Win7-Pro cannot reach the FortiSASE SSL VPN gateway
- B. The Win7-Pro FortiClient version does not match the FortiSASE endpoint requirement.
- C. Win-7 Pro has exceeded the total vulnerability detected threshold.
- D. The Win7-Pro device posture has changed.

Answer: C

Explanation:
Based on the provided exhibits, the reason why the Win7-Pro endpoint can no longer access the internet through FortiSASE is due to exceeding the total vulnerability detected threshold. This threshold is used to determine if a device is compliant with the security requirements to access the network.
* Endpoint Compliance:
* FortiSASE monitors endpoint compliance by assessing various security parameters, including the number of vulnerabilities detected on the device.
* The compliance status is indicated by the ZTNA tags and the vulnerabilities detected.
* Vulnerability Threshold:
* The exhibit shows that Win7-Pro has 176 vulnerabilities detected, whereas Win10-Pro has 140 vulnerabilities.
* If the endpoint exceeds a predefined vulnerability threshold, it may be restricted from accessing the network to ensure overall network security.
* Impact on Network Access:
* Since Win7-Pro has exceeded the vulnerability threshold, it is marked as non-compliant and subsequently loses internet access through FortiSASE.
* The FortiSASE endpoint profile enforces this compliance check to prevent potentially vulnerable devices from accessing the internet.
References:
FortiOS 7.6 Administration Guide: Provides information on endpoint compliance and vulnerability management.
FortiSASE 23.2 Documentation: Explains how vulnerability thresholds are used to determine endpoint compliance and access control.

NEW QUESTION # 57
Which information can an administrator monitor using reports generated on FortiSASE?

- A. FortiSASE administrator and system events
- B. SD-WAN performance
- C. sanctioned and unsanctioned Software-as-a-Service (SaaS) applications usage
- D. FortiClient vulnerability assessment

Answer: C

Explanation:

FortiSASE reporting provides visibility into the usage of sanctioned and unsanctioned SaaS applications, enabling administrators to monitor cloud application activity and enforce security policies.

NEW QUESTION # 58

Refer to the exhibits. Antivirus is installed on a Windows 10 endpoint, but the windows application firewall is stopping it from running.
What will the endpoint security posture check be?

- A. FortiClient will be unmanaged from FortiSASE due to failed compliance.
- B. FortiClient will trigger network lockdown on the endpoint.
- C. FortiClient will prompt the user to enable antivirus.
- D. FortiClient will tag the endpoint as FortiSASE-Non-Compliant.

Answer: D

Explanation:
Although the antivirus is installed, it is not running due to the Windows application firewall blocking it. According to the FortiSASE-Non-Compliant rule, antivirus software must be both installed and running. Since this condition fails, FortiClient assigns the FortiSASE-Non-Compliant tag to the endpoint.

NEW QUESTION # 59

Which two benefits come from integrating SoCaaS with FortiSASE? (Choose two answers)

- A. Provides bandwidth usage analytics
- B. Eliminates the need of endpoint projection software
- C. Continuous threat monitoring of all connected endpoints
- D. Centralized visibility of all threat events

Answer: C,D

Explanation:
The integration of FortiGuard SOCaaS with FortiSASE significantly strengthens an organization's security posture by offloading complex security operations to Fortinet's expert analysts.4
* Continuous Threat Monitoring (B): FortiGuard SOCaaS provides 24x7x365 threat monitoring for all endpoints connected to the FortiSASE environment. This service eliminates the need for organizations to hire and maintain their own round-the-clock security operations staff while ensuring that threats are detected and verified in as little as 15 minutes.
* Centralized Visibility (C): By forwarding FortiSASE logs to the SOCaaS cloud, administrators gain centralized visibility of all security events through a single, user-friendly portal. This portal allows security teams to track threats, review expert-led incident escalations, and communicate directly with Fortinet SOC analysts to streamline the incident response process.
* Operational Efficiency: The integration uses AI-driven alert triage and automated correlation to distill data from the Fortinet Security Fabric, focusing on legitimate threats and reducing the alert fatigue often experienced by internal IT teams.
