Development-Lifecycle-and-Deployment-Architect - Salesforce Certified Development Lifecycle and Deployment Architect –Efficient Reliable Dumps Files

DumpsReview has made the Salesforce Development-Lifecycle-and-Deployment-Architect exam dumps after consulting with professionals and getting positive feedback from customers. The team of DumpsReview has worked hard in making this product a successful Development-Lifecycle-and-Deployment-Architect study material. So we guarantee that you will not face issues anymore in passing the Development-Lifecycle-and-Deployment-Architect Certification test with good grades. DumpsReview has built customizable Development-Lifecycle-and-Deployment-Architect practice exams (desktop software & web-based) for our customers.

Salesforce Certified Development Lifecycle and Deployment Architect Sample Questions (Q116-Q121):

NEW QUESTION # 116
Which are two key benefits of fully integrating an agile issue tracker with software testing and continuous integration tools? Choose 2 answers?

- A. Developers can see automated test statuses post code commit on a specific user story.
- B. Developers can use the committed code's build status directly on the user story record.
- C. Developers can collaborate and communicate effectively on specific user stories.
- D. Developers can observe their team velocity on the burn chart report in the agile tool.

Answer: A,B

NEW QUESTION # 117
Universal Containers wants to implement a release strategy with major releases every four weeks and minor releases every week. Major releases follow Development, System Testing (SIT), User Acceptance Testing (UAT) and Training Minor releases follow Development and User Acceptance Testing (UAT) stages. What represents a valid environment strategy consideration for UAT?

- A. Minor releases use Developer and Major releases Full copy
- B. Minor releases use Partial copy and Major releases use Full copy
- C. Minor and Major releases use same Full copy.
- D. Minor and Major releases use separate Developer pro

Answer: B

NEW QUESTION # 118
Universal containers is looking to install a new application to enable advanced quoting in its current Professional Edition org. The org is near capacity with object and tab limits. Which two solutions should the Architect recommend? Choose 2 answers

- A. Upgrade to an Enterprise Edition org
- B. Buy more user licenses to increase org limits
- C. Install an Aloha certified App
- D. Create and install an unmanaged package

Answer: A,C

Explanation:
Explanation
A and B are the correct answers, as installing an Aloha certified app and upgrading to an Enterprise Edition org are the best solutions to enable advanced quoting in the current Professional Edition org. An Aloha certified app is an app that does not count against the org limits, such as objects and tabs, and can provide additional functionality and features. Upgrading to an Enterprise Edition org can increase the org limits, as well as provide access to more customization and automation options. C is incorrect, as creating and installing an unmanaged package is not a good solution, as it will consume the org limits and may not provide the desired functionality. D is incorrect, as buying more user licenses will not increase the org limits, but only the number of users who can access the org. You can learn more about this topic in the Salesforce Editions and Limits module on Trailhead.

NEW QUESTION # 119
Universal Containers has a large call center that has a limited inventory and must ensure there is product availability before an Opportunity is marked as Closed. Custom Apex has been implemented to check inventory levels before an Opportunity is saved. What should an architect consider before recommending Performance testing?

- **A. Number of concurrent transactions**
- B. Number of debug log entries
- C. Number of unit tests
- D. Number of Apex Hammer failures

Answer: A

NEW QUESTION # 120
Universal Containers' org is complex but well-organized in unlocked packages with their dependencies. The development team was asked for a new feature, and the package that will be changed has already been identified.
Which environment should be used for this development?

- A. A Developer Pro sandbox with the package code that will be changed and its dependencies installed.
- B. A scratch org with all installed packages.
- C. A scratch org with the package code that will be changed and its dependencies
- D. A Developer Pro sandbox with all packages installed.

Answer: C

Explanation:
Explanation
The best environment for developing a new feature in an org with unlocked packages is a scratch org with the package code that will be changed and its dependencies. A scratch org is a source-driven and disposable deployment of Salesforce code and metadata that is fully configurable and can be created quickly. A scratch org can also install unlocked packages and their dependencies, which can help ensure compatibility and functionality of the new feature. A Developer Pro sandbox is not a good option, as it is not source-driven and can have outdated or conflicting data and metadata.

NEW QUESTION # 121
......

Thousands of Salesforce Certified Development Lifecycle and Deployment Architect (Development-Lifecycle-and-Deployment-Architect) exam applicants are satisfied with our Development-Lifecycle-and-Deployment-Architect practice test material because it is according to the latest Salesforce Certified Development Lifecycle and Deployment Architect (Development-Lifecycle-and-Deployment-Architect) exam syllabus and we also offer up to 1 year of free Salesforce Dumps updates. Visitors of DumpsReview can check the Development-Lifecycle-and-Deployment-Architect product by trying a free demo. Buy the Development-Lifecycle-and-Deployment-Architect test preparation material now and start your journey towards success in the Development-Lifecycle-and-Deployment-Architect examination.
