BTW, DOWNLOAD part of Actual4Exams SPLK-2002 dumps from Cloud Storage: [https://drive.google.com/open?id=1aenxfHRZWR34eSyprYsa9KIO4I\\_7Bhg](https://drive.google.com/open?id=1aenxfHRZWR34eSyprYsa9KIO4I_7Bhg)

In fact, the overload of learning seems not to be a good method, once you are weary of such a studying mode, it's difficult for you to regain interests and energy. Therefore, we should formulate a set of high efficient study plan to make the SPLK-2002 exam dumps easier to operate. Here our products strive for providing you a comfortable study platform and continuously upgrade SPLK-2002 Test Prep to meet every customer's requirements. Under the guidance of our SPLK-2002 test braindumps, 20-30 hours' preparation is enough to help you obtain the Splunk certification, which means you can have more time to do your own business as well as keep a balance between a rest and taking exams.

As long as you are determined to change your current condition, nothing can stop you. Once you get the SPLK-2002 certificate, all things around you will turn positive changes. Never give up yourself. You have the right to own a bright future. And our SPLK-2002 exam materials are the right way to help you get what you want with ease. As the most popular study questions in the market, our SPLK-2002 Practice Guide wins a good reputation for the high pass rate as 98% to 100%. Once you it, you will pass for sure.

## Official SPLK-2002 Study Guide, Exam SPLK-2002 Review

In order to let customers enjoy the best service, all SPLK-2002 exam prep of our company were designed by hundreds of experienced experts. Our SPLK-2002 test questions will help customers learn the important knowledge about exam. At the same time, our SPLK-2002 test torrent can help you avoid falling into rote learning habits. You just need to spend 20 to 30 hours on study, and then you can take and pass your SPLK-2002 Exam. In addition, the authoritative production team of our SPLK-2002 exam prep will update the study system every day in order to make our customers enjoy the newest information.

The SPLK-2002 certification exam consists of a 3-hour proctored exam, which includes multiple-choice and scenario-based questions. SPLK-2002 exam is designed to assess the candidate's ability to apply their knowledge and skills to real-world scenarios and solve complex problems using Splunk Enterprise software. Successful candidates will receive the Splunk Enterprise Certified Architect certification, which is a globally recognized credential that demonstrates their expertise in managing and analyzing machine-generated data using Splunk.

To prepare for the SPLK-2002 exam, candidates should have hands-on experience with Splunk Enterprise and be familiar with the best practices for deploying and managing Splunk in large-scale environments. They should also be familiar with the latest Splunk features and capabilities, as well as the best practices for securing Splunk deployments against cyber threats. With the right preparation, candidates can pass the SPLK-2002 Exam and earn the Splunk Enterprise Certified Architect certification, which demonstrates their expertise in designing and deploying complex Splunk environments that meet the needs of modern organizations.

## Splunk Enterprise Certified Architect Sample Questions (Q138-Q143):

### NEW QUESTION # 138

Which server.conf attribute should be added to the master node's server.conf file when decommissioning a site in an indexer cluster?

- A. site\_search\_factor
- B. site\_mappings
- C. available\_sites
- D. site\_replication\_factor

**Answer: B**

Explanation:

Explanation/Reference: <https://docs.splunk.com/Documentation/Splunk/7.3.2/Indexer/Decommissionasite>

#### NEW QUESTION # 139

Following Splunk recommendations, where could the Monitoring Console (MC) be installed in a distributed deployment with an indexer cluster, a search head cluster, and 1000 forwarders?

- A. On a search head in the cluster.
- B. On the deployment server.
- C. On the search head cluster deployer.
- D. On a search peer in the cluster.

**Answer: C**

Explanation:

The Monitoring Console (MC) is the Splunk Enterprise monitoring tool that lets you view detailed topology and performance information about your Splunk Enterprise deployment1. The MC can be installed on any Splunk Enterprise instance that can access the data from all the instances in the deployment2. However, following the Splunk recommendations, the MC should be installed on the search head cluster deployer, which is a dedicated instance that manages the configuration bundle for the search head cluster members3. This way, the MC can monitor the search head cluster as well as the indexer cluster and the forwarders, without affecting the performance or availability of the other instances4. The other options are not recommended because they either introduce additional load on the existing instances (such as A and D) or do not have access to the data from the search head cluster (such as B).

#### NEW QUESTION # 140

Which of the following server. conf stanzas indicates the Indexer Discovery feature has not been fully configured (restart pending) on the Master Node?

- A.

```
[clustering]
mode = master
pass4SymmKey = $7$tYTXzke+1r+2DULTHHDUTmYOXdTZJPxm21XwMARrJE20jsmicp9C3ni0
```

```
[indexer_discovery]
pass4SymmKey = idxdiscovery
```

- B.

- C.

```
[clustering]
mode = forwarder
pass4SymmKey = $7$PU9SBXww63Vz3UJdYGIN0UrdscRh83ssC2pEpwE6P3gn50iNFO94g==
```

- D.

```
[indexer_discovery]
pass4SymmKey = $7$XcXlllu4630Jbui14oVe295+mvx6gCKKv6kf2zEaVB6Ie4DcZ318nLV1fW
splunk>
```

**Answer: D**

#### Explanation:

The Indexer Discovery feature enables forwarders to dynamically connect to the available peer nodes in an indexer cluster. To use this feature, the manager node must be configured with the [indexer\_discovery] stanza and a pass4SymmKey value. The forwarders must also be configured with the same pass4SymmKey value and the master\_uri of the manager node. The pass4SymmKey value must be encrypted using the splunk\_encrypt command. Therefore, option A indicates that the Indexer Discovery feature has not been fully configured on the manager node, because the pass4SymmKey value is not encrypted. The other options are not related to the Indexer Discovery feature. Option B shows the configuration of a forwarder that is part of an indexer cluster.

Option C shows the configuration of a manager node that is part of an indexer cluster. Option D shows an invalid configuration of the [indexer\_discovery] stanza, because the pass4SymmKey value is not encrypted and does not match the forwarders' pass4SymmKey value12

1: <https://docs.splunk.com/Documentation/Splunk/9.1.2/Indexer/indexerdiscovery> 2:

[https://docs.splunk.com/Documentation/Splunk/9.1.2/Security/Secureyourconfigurationfiles#Encrypt\\_the\\_pass4S](https://docs.splunk.com/Documentation/Splunk/9.1.2/Security/Secureyourconfigurationfiles#Encrypt_the_pass4S)

#### NEW QUESTION # 141

(Which deployer push mode should be used when pushing built-in apps?)

- A. merge\_to\_default
- B. default only
- **C. local\_only**
- D. full

#### Answer: C

#### Explanation:

According to the Splunk Enterprise Search Head Clustering (SHC) Deployer documentation, the "local\_only" push mode is the correct option when deploying built-in apps. This mode ensures that the deployer only pushes configurations from the local directory of built-in Splunk apps (such as search, learned, or launcher) without overwriting or merging their default app configurations.

In an SHC environment, the deployer is responsible for distributing configuration bundles to all search head members. Each push can be executed in different modes depending on how the admin wants to handle the app directories:

- \* full: Overwrites both default and local folders of all apps in the bundle.
- \* merge\_to\_default: Merges configurations into the default folder (used primarily for custom apps).
- \* local\_only: Pushes only local configurations, preserving default settings of built-in apps (the safest method for core Splunk apps).
- \* default only: Pushes only default folder configurations (rarely used and not ideal for built-in app updates).

Using the "local\_only" mode ensures that default Splunk system apps are not modified, preventing corruption or overwriting of base configurations that are critical for Splunk operation. It is explicitly recommended for pushing Splunk-provided (built-in) apps like search, launcher, and user-prefs from the deployer to all SHC members.

#### NEW QUESTION # 142

Which command will permanently decommission a peer node operating in an indexer cluster?

- A. splunk stop -f
- B. splunk decommission --enforce counts
- **C. splunk offline --enforce-counts**
- D. splunk offline -f

#### Answer: C

#### Explanation:

Explanation/Reference: <https://docs.splunk.com/Documentation/Splunk/7.3.2/Indexer/Takeapeeroffline>

#### NEW QUESTION # 143

.....

To find better job opportunities you have to learn new and in-demand skills and upgrade your knowledge. With the Splunk Enterprise Certified Architect SPLK-2002 Exam you can do this job nicely and quickly. To do this you just need to get registered in the Actual4Exams Splunk Enterprise Certified Architect exam and put all your efforts to pass this challenging Splunk Enterprise Certified Architect exam with good scores. However, you should keep in mind that the Splunk Enterprise Certified Architect exam is a valuable credential and will play an important role in your career advancement
