

완벽한C_TS422_2023시험대비덤프문제덤프문제자료

Itexamdump C_TS422_2023 최신 PDF 버전 시험 문제집을 무료로 Google Drive에서 다운로드하세요:
https://drive.google.com/open?id=1OFb61ulpmVAL3ApDB14H6V_DmBZ8VPue

고객님의 시간을 조금이라도 절약해드리고 공을 적게 들여도 자격증 취득이 쉬워지도록 Itexamdump의 IT전문가들은 최신 실러버스에 따라 몇년간의 노하우와 경험을 충분히 활용하여SAP C_TS422_2023시험대비자료를 연구제작 하였습니다. SAP C_TS422_2023 덤프를 공부하여 시험에서 떨어지는 경우 덤프비용환불 혹은 다른 과목으로 교환 하는중 한가지 서비스를 제공해드립니다.

SAP C_TS422_2023 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none">• Process Orders in SAP S• 4HANA: This section covers an introduction to process order components, processing, and relevant master data objects. Overview of Good Manufacturing Practices (GMP) features.
주제 2	<ul style="list-style-type: none">• Master Data in SAP S• 4HANA: This section covers the exploration of crucial production-related master data elements, with emphasis on bill of material, routing, and production version.
주제 3	<ul style="list-style-type: none">• Production Orders in SAP S• 4HANA: This section covers BOM item categorization, order status management, availability checks, routing selection, order type setup, and material handling processes.
주제 4	<ul style="list-style-type: none">• Demand Management in SAP S• 4HANA: This section covers a comparison of production methods in various manufacturing environments.
주제 5	<ul style="list-style-type: none">• Material Requirements Planning in SAP S• 4HANA: This part of the exam covers an examination of planning strategies, tools, and long-term planning concepts. Overview of MRP fundamentals and lot size procedures.
주제 6	<ul style="list-style-type: none">• Advanced Planning in SAP S• 4HANA: This section includes an overview of advanced planning fundamentals and master data. Explanation of key tools and processes. Discussion of planning evaluation concepts.

주제 7	<ul style="list-style-type: none"> • Lean Manufacturing in SAP S • 4HANA: This section covers repetitive manufacturing master data, line load planning, and Kanban systems.
주제 8	<ul style="list-style-type: none"> • Managing Clean Core: This section covers the application of clean core principles to enhance business process agility, reduce adaptation efforts, and drive innovation in ERP systems.

C_TS422_2023최신 업데이트버전 시험자료 & C_TS422_2023최고품질 덤프문제

현재 많은 IT인사들이 같은 생각하고 있습니다. 그것은 바로 SAP C_TS422_2023인증시험자격증 취득으로 하여 IT 업계의 아주 중요한 한걸음이라고 말입니다. 그만큼 SAP C_TS422_2023인증시험의 인기는 말 그대로 하늘을 찌르고 있습니다,

최신 SAP Certified Application Specialist C_TS422_2023 무료샘플문제 (Q72-Q77):

질문 # 72

Your project uses process orders for the production of liquid chemicals. What can you define to ensure that production flow only happens in suitable and physically connected tanks? Note: There are 2 correct answers to this question.

- A. Resource network
- B. Resource matrix
- C. Resource selection
- D. Resource hierarchy

정답: A,C

설명:

A resource network is a business object in PP/DS that defines the allowed directed connections between two or more resources. A directed connection means that the connection from Resource 1 to Resource 2 is not the same as the inverse connection from Resource 2 to Resource 1. You use this object to model existing production constraints more precisely, with the objective of creating a finite and technically feasible production schedule. Resource networks simplify the modeling of resource restrictions for consecutive operations or orders1 A resource selection is a business object in PP/DS that defines the criteria for selecting a suitable resource for an operation or an order. You use this object to specify the characteristics, attributes, and capacities of the resources that can be used for a particular production process. Resource selection allows you to optimize the resource utilization and reduce the setup times and costs2 A resource matrix is a business object in PP/DS that defines the relationships between different resources based on their characteristics and attributes. You use this object to determine the setup times and costs for changing from one resource to another. Resource matrix allows you to model the setup effort and expense more accurately and improve the production efficiency3 A resource hierarchy is a business object in PP/DS that defines the structure and sequence of resources that are used for a production process. You use this object to represent the logical and physical dependencies of the resources and to control the scheduling and sequencing of the operations or orders. Resource hierarchy allows you to model the production flow and capacity more realistically and ensure the technical feasibility of the production plan.

질문 # 73

Under what circumstances can you change the material type for a material if stocks, reservations, or purchasing documents exist? Note: There are 2 correct answers to this question.

- A. The quantity and value updates are the same

- B. The same batch management level is used
- C. The same base unit of measure is used.
- D. The same account category is used

정답: A,C

설명:

You can change the material type for a material if stocks, reservations, or purchasing documents exist only if the following conditions are met:

The same base unit of measure is used. This ensures that the material quantity is consistent across different material types.

The quantity and value updates are the same. This ensures that the material valuation is consistent across different material types.

The material is not subject to split valuation. This ensures that the material has only one valuation class and price control. Reference: [SAP Help Portal] - Change Material Type

질문 # 74

For a production version to be valid and consistent, what requirements must be fulfilled? Note: There are 3 correct answers to this question.

- A. The assigned routing and bill of material (BOM) must be valid in the entire validity period.
- B. The assigned routing and bill of material (BOM) must have the same validity period.
- C. The deletion flag must NOT be set for the bill of material (BOM) or the routing.
- D. The lot size range must be within the lot size range of the assigned routing.
- E. The consistency check must be performed.

정답: A,C,D

설명:

A production version in SAP S/4HANA (material master, MRP 4 view) links a BOM and routing for production. For it to be valid and consistent:

* The deletion flag must NOT be set for the bill of material (BOM) or the routing(A): If the BOM (CS02) or routing (CA02) has a deletion flag, it cannot be used in production planning or execution, rendering the production version invalid. This is a basic integrity check in SAP.

* The assigned routing and bill of material (BOM) must be valid in the entire validity period(C): The production version's validity period (e.g., Valid From/To dates) must align with the BOM and routing's validity. If either expires or is invalid during the version's timeframe, the system cannot use it (checked in MRP or order creation).

* The lot size range must be within the lot size range of the assigned routing(E): The production version's lot size (MRP 4 view) must fall within the routing's lot size range (CA02, header data). If the order quantity exceeds this range, the version is inconsistent for planning.

The consistency check(B) (transaction C252) is a manual validation tool, not a requirement for validity-it's optional. Same validity period(D) is not mandatory; overlapping validity is sufficient, as long as both are valid when needed. This is per SAP's production version documentation.

질문 # 75

Which of the following processes lead to an entry in the MRP planning file?

Note: There are 2 correct answers to this question.

- A. Changing the delivery address in transportation management
- B. Changing the stock in inventory management
- C. Changing the procurement type in the product master
- D. Changing the storage bin in warehouse management

정답: B,C

질문 # 76

How can you support a GMP (Good Manufacturing Practice) compliant production process? Note: There are 3 correct answers to this question.

- A. GMP-compliant flag
- B. Digital signature
- C. Batch record
- D. Recipe approval
- E. Approved resources

정답: B,C,D

설명:

In SAP S/4HANA Cloud Private Edition, supporting a Good Manufacturing Practice (GMP) compliant production process (common in industries like pharmaceuticals) involves features to ensure traceability, quality, and regulatory adherence:

* Digital signature(A): SAP supports digital signatures (configured in Customizing, Cross-Application Components > General Application Functions > Digital Signature) for critical process steps (e.g., order release in CO02 or confirmation in CO11N). This ensures authorized personnel approve actions, meeting GMP requirements for accountability and audit trails.

* Recipe approval(C): In process manufacturing, recipes (process orders use Production Process Models or Master Recipes, transaction C201) require approval (status change, e.g., from "Created" to "Released" via ECM or C202). This ensures only validated production instructions are used, a key GMP compliance step.

* Batch record(E): The electronic batch record (EBR, transaction COEBR or integrated in process order management) documents all production details (e.g., materials, quantities, quality checks). It's mandatory for GMP to provide a complete, auditable history of each batch (configured via process order settings).

Approved resources(B) isn't a standard SAP term-resources (work centers, CR02) can be quality-checked, but approval is process-driven, not a distinct feature. GMP-compliant flag(D) doesn't exist as a specific field- GMP compliance is achieved through process controls, not a single indicator. This is per SAP's GMP support documentation.

질문 # 77

.....

Itexamdump는 SAP C_TS422_2023 시험을 패스할 수 있는 아주 좋은 사이트입니다. Itexamdump은 아주 알맞게 최고의 SAP C_TS422_2023 시험문제와 답 내용을 만들어 냅니다. 덤프는 기존의 시험문제와 답과 시험문제분석 등입니다. Itexamdump에서 제공하는 SAP C_TS422_2023 시험자료의 문제와 답은 실제 시험의 문제와 답과 아주 비슷합니다.
