SAP C-IBP-2502 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Solution Architecture & Data Integration: his exam section is aimed at solution architects who work with SAP data integration. It covers the fundamental concepts of integrating external data sources with SAP, ensuring seamless data flow between systems. Candidates need to understand how to maintain system architecture for optimized performance and reliability.
Topic 2	<ul style="list-style-type: none"> • Key Figures & Attributes: This section of the exam measures the skills of supply chain analysts and focuses on the key figures and attributes used in planning. It covers how to define and configure key figures to ensure accurate data representation and decision-making. Candidates are also tested on their ability to manage attributes that support various planning scenarios.
Topic 3	<ul style="list-style-type: none"> • General Configuration of a Planning Area: This section is aimed at SAP solution consultants and covers the configuration of a planning area. It includes defining key planning parameters, setting up structures, and ensuring the system is configured to meet business needs. Candidates will be tested on their ability to customize planning areas for optimal performance.
Topic 4	<ul style="list-style-type: none"> • User Interface: This section assesses the knowledge of business users in navigating and utilizing the SAP interface effectively. It covers how to interact with different features, customize views, and leverage UI functionalities for efficient planning and reporting. Candidates are expected to demonstrate proficiency in accessing and interpreting data within the system.
Topic 5	<ul style="list-style-type: none"> • Master Data: This section is relevant to master data specialists and focuses on managing essential data for planning activities. It includes an understanding of product, location, and resource master data within SAP. Candidates will be tested on how to maintain accurate and consistent data to support planning functions.
Topic 6	<ul style="list-style-type: none"> • Analytics and Reporting: his section evaluates the expertise of reporting specialists in generating and interpreting reports within SAP. It covers key analytical tools and reporting functions that provide insights into planning performance. Candidates will be assessed on their ability to extract, analyze, and present data effectively to support business decisions.

Topic 7	<ul style="list-style-type: none"> • Planning Operators & Application: JobsThis section is designed for demand planners and focuses on the configuration and execution of planning operators and application jobs. It includes an understanding of how these tools automate planning processes and improve system performance. Candidates will be tested on their ability to configure and execute jobs that support various planning functions.

C-IBP-2502 Reliable Test Cost - C-IBP-2502 Valid Test Review

Now, you should do need to get the exam question sets from year to year and reference materials that is related to SAP C-IBP-2502 certification exam. Busying at work, you must not have enough time to prepare for your exam. So, it is very necessary for you to choose a high efficient reference material. What's more important, you should select a tool that suits you, which is a problem that is related to whether you can pass your exam successfully. Therefore, try SureTorrent SAP C-IBP-2502 Practice Test dumps.

SAP Certified Associate - SAP IBP for Supply Chain Sample Questions (Q12-Q17):

NEW QUESTION # 12

For which of the following application jobs can you enter planning filters as parameters? Note: There are 2 correct answers to this question.

- A. Create Time Periods for Time Profiles
- B. Purge Key Figure Data
- C. Purge Non-Conforming Data
- D. Purge Master Data

Answer: B,D

Explanation:

Application jobs in SAP IBP (via the Application Jobs app) automate tasks, and some allow planning filters to limit their scope.

* Option A: Purge Master Data This is correct. The Purge Master Data job accepts planning filters (e.g., specific Products or Locations) to selectively delete master data, per SAP IBP's job documentation.

* Option B: Purge Key Figure Data This is correct. The Purge Key Figure Data job uses planning filters to target specific keyfigure data (e.g., by Region), a standard feature, per SAP IBP's data management guides.

* Option C: Purge Non-Conforming Data This is incorrect. This job removes inconsistent data (e.g., orphaned records), but it doesn't use planning filters as parameters; it's system-driven.

* Option D: Create Time Periods for Time Profiles This is incorrect. This job generates time periods for a time profile and doesn't involve planning filters, which apply to planning objects, not time setup.

Thus, A and B support planning filters, per SAP IBP's official job capabilities.

NEW QUESTION # 13

What are the possible Master Data Maintenance options for SAP Integrated Business Planning for Supply Chain? Note: There are 3 correct answers to this question.

- A. The Data Integration Jobs app
- B. The Planner Workspaces app
- C. The SAP IBP, add-in for Microsoft Excel
- D. The Manage Master Data app
- E. The Planning Areas Model Configuration app

Answer: A,C,D

Explanation:

Master data maintenance in SAP IBP involves creating and updating planning objects (e.g., Products, Locations), supported by specific tools, per SAP IBP's documentation.

* Option A: The SAP IBP, add-in for Microsoft Excel This is correct. The Excel add-in's "Manage Planning Objects" feature allows

master data maintenance, per SAP IBP's UI capabilities.

* Option B: The Manage Master Data app This is correct. This Fiori app is designed for direct master data management (e.g., editing Locations), per SAP IBP's documentation.

* Option C: The Planner Workspaces app This is incorrect. Planner Workspaces is for planning and visualization, not master data maintenance.

* Option D: The Planning Areas Model Configuration app This is incorrect. This app configures planning areas, not master data directly.

* Option E: The Data Integration Jobs app This is correct. This app (formerly Data Integration) imports master data via files or integration, per SAP IBP's data management guides.

Thus, A, B, and E are maintenance options, per SAP IBP's official tools.

NEW QUESTION # 14

Which prerequisites must be met to maintain data types via the SAP IBP, add-in for Microsoft Excel? Note:

There are 2 correct answers to this question.

- A. Restriction types are set correctly
- B. The Inquire tab is activated in Microsoft Excel
- C. An applicable business catalog is assigned to your business role
- D. The Normalized setting is available in the Planning Area

Answer: B,C

Explanation:

Maintaining master data types via the SAP IBP Excel add-in (e.g., adding Products, Locations) requires specific system and user setup, as per SAP IBP's Excel integration guidelines.

* Option A: The Normalized setting is available in the Planning Area This is incorrect. "Normalized" is not a standard setting in SAP IBP planning areas related to master data maintenance. It may refer to data normalization conceptually, but it's not a prerequisite.

* Option B: Restriction types are set correctly This is incorrect. "Restriction types" is not a defined term in SAP IBP for Excel-based master data maintenance. Restrictions might apply to planning filters, not data types.

* Option C: The Inquire tab is activated in Microsoft Excel This is correct. The Inquire tab (an Excel add-in) must be enabled to support advanced features like master data maintenance in SAP IBP's Excel UI, ensuring compatibility and functionality, per SAP's technical requirements.

* Option D: An applicable business catalog is assigned to your business role This is correct. Users need a business role with a catalog (e.g., SAP_BR_PLANNER) that includes permissions for master data maintenance (e.g., via the "Manage Master Data" tile), per SAP IBP's security model.

Thus, C and D are prerequisites for maintaining data types in Excel, per SAP IBP's official setup documentation.

NEW QUESTION # 15

Analytics charts are created by the user in the Advanced Analytics application. What can the user do in the Advanced Analytics app? Note: There are 2 correct answers to this question.

- A. Trigger export to Manage Analytics Stories
- B. Merge charts together
- C. Apply filters on the data
- D. Group data

Answer: C,D

Explanation:

The Advanced Analytics app in SAP IBP allows users to create and customize charts for insights, with specific interactive features.

* Option A: Trigger export to Manage Analytics Stories This is incorrect. Charts are exported from Manage Analytics Stories, not Advanced Analytics directly; the flow is reversed.

* Option B: Merge charts together This is incorrect. Merging charts isn't a feature in Advanced Analytics; it supports individual chart creation.

* Option C: Apply filters on the data This is correct. Users can apply filters (e.g., by Product, Time) to refine chart data, a core feature, per SAP IBP's analytics documentation.

* Option D: Group data This is correct. Grouping (e.g., by Region) aggregates data in charts, a standard capability, per SAP IBP's Advanced Analytics guides.

Thus, C and D are actions in Advanced Analytics, per SAP IBP's official functionality.

NEW QUESTION # 16

Which processes are embedded in the sample planning areas SAP6 and SAP3?

- A. SAP6 Control Tower, and SAP3 Sales and Operations Planning and Supply Planning
- **B. SAP6 Demand Planning and Sensing, and SAP3 Inventory Planning**
- C. SAP6 Demand Planning and Sensing, and SAP3 Control Tower
- D. SAP6 Sales and Operations Planning and Supply Planning, and SAP3 Inventory Planning

Answer: B

Explanation:

SAP IBP provides sample planning areas (e.g., SAPIBP1, SAP3, SAP6) with preconfigured processes to demonstrate module-specific functionality.

* SAP6: Focused on Demand Planning and Sensing, enhancing short-term demand forecasts.

* SAP3: Focused on Inventory Optimization, managing multi-stage inventory targets.

* Option A: SAP6 Control Tower, and SAP3 Sales and Operations Planning and Supply Planning This is incorrect. SAP6 is not Control Tower-specific (that's SAP8), and SAP3 focuses on Inventory Optimization, not broad S&OP or Supply Planning.

* Option B: SAP6 Demand Planning and Sensing, and SAP3 Control Tower This is incorrect. SAP3 is Inventory Optimization, not Control Tower, which is a separate module (SAP8).

* Option C: SAP6 Demand Planning and Sensing, and SAP3 Inventory Planning This is correct.

SAP6 includes Demand Planning (statistical forecasting) and Demand Sensing (short-term adjustments), while SAP3 focuses on Inventory Planning (e.g., safety stock optimization), matching their official purposes per SAP IBP's sample content documentation.

* Option D: SAP6 Sales and Operations Planning and Supply Planning, and SAP3 Inventory Planning This is incorrect. SAP6 is narrower (Demand Planning/Sensing), not full S&OP or Supply Planning (more aligned with SAPIBP1). SAP3 is correct for Inventory Planning.

Thus, C accurately reflects the processes in SAP6 and SAP3, per SAP IBP's sample planning area definitions.
