Explanation

Section: Security Operations

NEW QUESTION # 1449

Discretionary Access Control (DAC) is based on which of the following?

- A. Security labels and privileges
- B. Standards and guidelines
- **C. Identification of subjects and objects**
- D. Information source and destination

Answer: C

Explanation:

Discretionary Access Control (DAC) is based on the identification of subjects and objects. DAC is a type of access control model that grants or denies access to the objects based on the identity or attributes of the subjects, as well as the permissions or rules defined by the owners of the objects. Subjects are the entities that request or initiate the access, such as users, processes, or programs. Objects are the entities that are accessed, such as files, folders, databases, or devices. In DAC, the owners of the objects have the discretion or authority to determine who can access their objects and what actions they can perform on them. DAC can provide flexibility and convenience for the subjects and the owners, but it can also introduce security risks, such as unauthorized access, privilege escalation, or information leakage.

NEW QUESTION # 1450

Which of the following is the BEST identity-as-a-service (IDaaS) solution for validating users?

- A. Security Assertion Markup Language (SAM.)
- B. Single Sign-on (SSO)
