Free PDF 2026 Useful Drupal-Site-Builder: Exam Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 Experience

Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 Practice exams of RealVCE i.e. desktop software and web-based are customizable and you can attempt them for multiple times. These practice exam save progress report of each attempt so you can assess it to find and overcome mistakes. As mentioned earlier, these Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 (Drupal-Site-Builder) practice exams can be customized according to your requirements. You can change their time and numbers of Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 (Drupal-Site-Builder) dumps questions as you want.

Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 Sample Questions (Q13-Q18):

NEW QUESTION # 13

Your Marketing Department notified you that the company has recently obtained a new Toll-free phone number for customer care. They have asked you to update the "Customer care contact information" posted on your website with the new number. The contact information appears in the sidebar of every page on the site.

How should you make your updates? (Select 2 options)

- A. Click the "Manage layout" link of the home page, find the field containing the inaccurate information, and make changes there.
- B. Click the "Edit" link on any page and make changes to the content in the editor form; repeat this process for all pages on the site.
- C. Navigate to the Block Layout admin page's custom block library, find the custom block that contains the information in question, and make changes to the content in the block editor.

- **D. Hover over the content until a pencil icon appears, click the icon, and choose "Edit" so that you can modify the content in Custom block edit interface.**

Answer: C,D

Explanation:

In Drupal 10 and Drupal 11, content that appears in the sidebar across all pages is typically implemented as a custom block placed in a theme region via the Block Layout system. Drupal documentation explains that reusable content like contact information is best managed through custom blocks, which can be edited centrally and automatically update everywhere they are placed.

Option A is correct because the proper way to update such content is to go to Structure # Block layout # Custom block library, locate the block, and edit it. This ensures the change is reflected globally wherever the block is used.

Option C is also correct because Drupal provides contextual links (the pencil icon) that allow administrators to directly edit blocks from the front end. This is a standard and documented shortcut for editing block content.

Option B is incorrect because Layout Builder is not mentioned and is not required here. Option D is incorrect because editing individual pages would not update a shared sidebar block and would be inefficient and incorrect.

Thus, the correct Drupal site-building approaches are editing the custom block via the block library or using contextual links, making A and C correct.

NEW QUESTION # 14

Your client copies HTML from an external source and pastes into the default WYSIWYG Editor on your site (CKEditor). The client has come to you complaining of broken HTML being displayed on the site. The CKEditor is configured to use Full HTML text format allowing all HTML elements and should continue to allow all elements.

How would you fix the issue of broken HTML?

- A. Enable "Limit allowed HTML tags and correct faulty HTML" option on Full HTML
- B. Use JavaScript HTML corrector plugin in your CKEditor
- C. Suggest using an online HTML validator before pasting into CKEditor
- **D. Enable "Correct faulty and chopped off HTML" filter on Full HTML text format**

Answer: D

Explanation:

Drupal uses text formats and filters to control how HTML input is processed before being displayed. One of the available filters is "Correct faulty and chopped off HTML", which is specifically designed to fix improperly formatted or broken HTML markup.

According to Drupal documentation, this filter ensures that HTML pasted into editors (like CKEditor) is automatically cleaned and corrected, such as closing unclosed tags, fixing malformed markup, and preventing rendering issues. This is particularly useful when users paste HTML from external sources, which often includes inconsistent or invalid markup.

Option D is correct because it directly addresses the issue at the text format level without restricting allowed tags, maintaining the requirement to allow all HTML elements.

Option C is incorrect because enabling "Limit allowed HTML tags" would restrict HTML usage, which contradicts the requirement to allow all elements. Options A and B are not standard Drupal solutions and do not align with Drupal's built-in filtering system.

Therefore, enabling the Correct faulty and chopped off HTML filter is the correct and recommended approach in Drupal 10 and Drupal 11.

NEW QUESTION # 15

You have downloaded a contributed module and added it to modules/contrib folder on your Drupal site.

However, you are unable to install the module as the checkbox next to the module name appears disabled on the Extend page.

What could be the reason of this?

- A. You do not have 'install modules' permission
- B. modules/contrib is incorrect folder for contributed modules
- **C. A module on which the current module has a dependency is missing**
- D. The module was not downloaded using Drupal's UI

Answer: C

Explanation:

In Drupal 10 and Drupal 11, a module can appear on the Extend page but still have its checkbox unavailable when Drupal determines that its requirements are not met. One of the most common and documented reasons is missing dependencies. Drupal

modules declare dependencies in their .info.yml file, and if one or more required modules are not present or enabled, Drupal prevents installation until those dependencies are satisfied. Drupal's module documentation specifically notes that when a module is listed on admin/modules but its checkbox is disabled, you should verify compatibility and requirements declared in the module metadata.

Option D fits Drupal's standard dependency behavior. This is also consistent with Drupal community documentation explaining that if you cannot check a module or feature on the module listing page, it is most likely because required dependent modules are missing, and unmet dependencies should be checked first.

The other options are not the correct explanation here. modules/contrib is a valid and standard location for contributed modules, and downloading a module outside the Drupal UI does not itself disable installation. A missing permission would typically affect access to the page or action availability, but the classic reason for a disabled module checkbox on the Extend page is unmet dependencies.

NEW QUESTION # 16

Your site has three Content types with a Media reference field. The field is configured to Media type as Image. You noticed that some users are adding animated GIF files while adding the content, which are very distracting.

How can you disallow adding files with .gif extension on all the Content types which use the Media reference field?

- A. Edit the Content types and update Media field settings in Manage form display tab.
- **B. Edit the Media type Image and remove gif from "image" field settings in the Manage fields tab.**
- C. Edit the Media type Image and update media type settings to disallow .gif files.
- D. Edit the Content types and disallow .gif extension in the Media reference field settings.

Answer: B

NEW QUESTION # 17

You are building a conference website. All attendees are required to submit an RSVP form. The submissions of the form should be emailed to the attendee and site administrator.

How will you build this functionality?

- A. Create a content type called RSVP with the required fields. Give the permission to create RSVP content to the attendee role.
- B. Download and enable the RSVP module.
- **C. Create a new contact form type called RSVP and configure email functionality in the form.**
- D. Enable site-wide contact form, rename it to RSVP and configure email functionality in the form.

Answer: C

Explanation:

Drupal 10 and Drupal 11 include the Contact module in core, which allows administrators to create multiple contact form types . Each contact form can have its own configuration, including recipients and email notifications . According to Drupal documentation, you can create custom contact forms (e.g., RSVP) and configure them to send emails to specified recipients when a user submits the form.

Option A is correct because creating a dedicated RSVP contact form allows you to configure email notifications to both the attendee (via auto-reply) and the site administrator. This approach uses Drupal core functionality and is the recommended way to handle simple form submissions with email notifications.

Option B is incorrect because content types are used for structured content, not form submissions with email handling. Option C is not ideal because the site-wide contact form is meant for general communication and does not provide flexibility for RSVP-specific workflows. Option D is unnecessary since Drupal core already provides the required functionality.

Thus, the best and documented solution is to create a custom contact form and configure its email settings, making A correct.

NEW QUESTION # 18

.....

As we all know, RealVCE's Acquia Drupal-Site-Builder exam training materials has very high profile, and it is also well-known in the worldwide. Why it produces such a big chain reaction? This is because RealVCE's Acquia Drupal-Site-Builder Exam Training materials is really good. And it really can help us to achieve excellent results.

Drupal-Site-Builder Valid Test Cost: https://www.realvce.com/Drupal-Site-Builder_free-dumps.html
