Nutanix certification NCP-DB-6.10 exam best training materials

Dumps4PDF offers Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 (NCP-DB-6.10) practice exams (desktop & web-based) which are customizable. It means candidates can set time and Nutanix NCP-DB-6.10 questions of the Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 (NCP-DB-6.10) practice exam according to their learning needs. The Real NCP-DB-6.10 Exam environment of practice test help test takers to get awareness about the test pressure so that they become capable to counter this pressure during the final exam.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q73-Q78):

NEW QUESTION # 73
Which site needs to be reachable to ensure an NDB server can send periodic telemetry data to the central Nutanix repository over port 443?

- A. developers.nutanix.com
- B. download.nutanix.com
- C. portal.nutanix.com
- D. insights.nutanix.com

Answer: D

Explanation:

To ensure an NDB server can send periodic telemetry data to the central Nutanix repository, the server must be able to communicate with the Nutanix Insights platform over port 443 (HTTPS).

The insights.nutanix.com site is the designated endpoint for telemetry data, which includes usage statistics, health metrics, and other operational data sent to Nutanix for support and analytics purposes. This connectivity is a standard requirement for NDB to comply with Nutanix's telemetry and support framework, and port 443 is used for secure transmission.

NEW QUESTION # 74

A database administrator wants to clone an SQL database that has Transparent Data Encryption (TDE) enabled.
Which two steps must be taken on the target server for this clone to be successful? (Choose two.)

- A. Backup the keystore bundle file from the source database server VM.
- B. Run the post-clone command script.
- C. Backup the .cer and .pvk files from the source database server VM.
- D. Run the pre-clone command script.

Answer: A,B

Explanation:
When cloning an SQL database with Transparent Data Encryption (TDE) enabled in NDB, the target server must handle the encryption keys to ensure the cloned database remains functional and secure. TDE uses a keystore (e.g., a bundle file containing the master key and certificate) to encrypt data. Two steps are required: (1) The administrator must back up the keystore bundle file from the source database server VM and transfer it to the target server, ensuring the clone can decrypt the data. (2) After the clone is created, the administrator must run the post-clone command script, which configures the TDE keys on the target server, completes the encryption setup, and activates the cloned database.

NEW QUESTION # 75

An administrator is experiencing issues with NDB and some of its operations. A case has been logged with Nutanix Support and a request has been made to gather a diagnostics bundle. Where are two valid places to generate and download a diagnostics bundle? (Choose two.)

- A. Prism Element GUI
- B. NDB CLI
- C. Prism Central GUI
- D. NDB GUI

Answer: B,D

Explanation:
When an administrator experiences issues with NDB and Nutanix Support requests a diagnostics bundle, it can be generated from two valid locations. The NDB GUI provides an option under the administration or support section to create and download the bundle, offering a user-friendly interface. Alternatively, the NDB CLI allows generation via specific commands (e.g., era diagnostics collect), providing a scriptable approach. Both methods are supported for troubleshooting and support purposes.

NEW QUESTION # 76

An administrator needs the ability to clone a source database to a point in time. What is the lowest log frequency in minutes that can be configured in the Era IJI for log catchup operation?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:
The log frequency in the Era IJI for log catchup operation can be configured to as low as 5 minutes. This allows the system to capture changes to the database at a high frequency, enabling more precise point-in-time recovery options. However, it's important to note that a higher frequency of log catchup operations can lead to increased system load. Therefore, the optimal frequency may

vary depending on the specific requirements and capabilities of your system.
Please refer to the Nutanix Database Automation (NCP-DB) Learning documents for more detailed information.

NEW QUESTION # 77
An administrator needs to add multiple databases to an existing PostgreSQL instance. How should the administrator satisfy this requirement?

- A. Modify parameter profile using the GUI.
- B. Modify parameter profile using ncli.
- C. Modify parameter profile using NDB CLI.
- D. Modify parameter profile using post script.

Answer: A

Explanation:
To add multiple databases to an existing PostgreSQL instance managed by NDB, the administrator should use the NDB graphical user interface (GUI). The GUI provides a user- friendly way to modify the parameter profile associated with the PostgreSQL instance, allowing the addition of new databases by adjusting settings such as database names, sizes, or configurations. This process typically involves navigating to the "Databases" or "Instances" section, selecting the PostgreSQL instance, and editing the parameter profile to include additional databases.

NEW QUESTION # 78
