NS0-185 Dumps Guide & New NS0-185 Exam Book

You can find different kind of Network Appliance exam dumps and learning materials in our website. You just need to spend your spare time to practice the NS0-185 valid dumps and the test will be easy for you if you remember the key points of NS0-185 Test Questions and answers skillfully. Getting high passing score is just a piece of cake.

Network Appliance NetApp Storage Installation Engineer, ONTAP Professional Exam Sample Questions (Q27-Q32):

NEW QUESTION # 27

Before expanding a cluster, which two ONTAP configuration backup methods are available? (Choose two.)

- A. storage VM
- B. node
- C. switch
- D. cluster

Answer: C,D

NEW QUESTION # 28

What is the main function of ACP?

- A. It allows cabling the shelf to two additional controllers.
- B. It allows the controller to nondisruptively reset the SAS expanders.
- C. It allows the controller to use Ethernet instead of SAS to fetch storage data.
- D. It enables automatic shelf ID assignment.

Answer: B

Explanation:

Alternate Control Path (ACP) provides an out-of-band management path to disk shelves, allowing ONTAP to monitor and reset SAS expanders nondisruptively. It does not carry data traffic and does not assign shelf IDs.

NEW QUESTION # 29

When you start a new Service Event Report, what must be entered first?

- A. the project number
- B. the node serial number
- C. the sales order number
- D. the case ID number

Answer: B

Explanation:

A Service Event Report (SER) is used to document installation, maintenance, or corrective actions performed on NetApp systems. The node serial number is the primary identifier used to associate the report with specific hardware.

Other identifiers such as case ID, project number, or sales order number are supplementary and may not always exist at the time the SER is created.

Therefore, the correct answer is B (the node serial number).

NEW QUESTION # 30

Your customer currently has a 4-node AFF A400 cluster that runs ONTAP 9.8, with two NS224 shelves connected to each HA pair. The customer needs to add additional capacity to the cluster.

Which two actions would enable the customer to accomplish this task? (Choose two.)

- A. Connect the new NS224 shelves to the existing NS224 shelves and adjust the shelf IDs.
- B. Deploy a new AFF A400 to the cluster.
- C. Deploy new, dedicated, storage switches for the new NS224 shelves.
- D. Connect the new NS224 shelves to the existing Cisco Nexus 3232C switches.

Answer: B,D

Explanation:

NS224 shelves are Ethernet-attached and connect through supported Ethernet switches. Additional capacity can be added either by attaching new NS224 shelves to the existing Ethernet fabric or by scaling out the cluster with additional AFF A400 nodes. NS224 shelves cannot be daisy-chained directly to other NS224 shelves, and dedicated storage switches are not required.

NEW QUESTION # 31

During an installation of an AFF A400 cluster, you need to configure secure multitenancy. What will enable you to accomplish this task?

- **A. IPspaces**
- B. failover groups
- C. VLANs
- D. broadcast domains

Answer: A

Explanation:

Secure multitenancy in ONTAP requires complete separation of network traffic, routing tables, and IP addressing. IPspaces provide this level of isolation by creating independent network stacks within a single ONTAP cluster.

Failover groups, VLANs, and broadcast domains organize network paths but do not isolate routing domains.

Only IPspaces ensure tenants cannot access each other's network traffic.

Thus, IPspaces enable secure multitenancy.

NEW QUESTION # 32

.....

ActualVCE follows its motto to facilitate its consumer by providing them the material to qualify for the Network Appliance NS0-185 certification exam with excellence. Therefore, it materializes its mission by giving them free of cost Network Appliance NS0-185 demo of the dumps. This practical step taken by the ActualVCE will enable its users to assess the quality of the Network Appliance NS0-185 dumps.
