If you want to know whether DumpsValid practice test dumps suit you, you can download free demo to experience it in advance.

HashiCorp Certified: Terraform Associate (004) (HCTA0-004) Sample Questions (Q164-Q169):

NEW QUESTION # 164

As a member of an operations team that uses infrastructure as code (IaC) practices, you are tasked with making a change to an infrastructure stack running in a public cloud. Which pattern would follow IaC best practices for making a change?

- A. Make the change via the public cloud API endpoint
- B. Use the public cloud console to make the change after a database record has been approved
- C. Clone the repository containing your infrastructure code and then run the code
- **D. Submit a pull request and wait for an approved merge of the proposed changes**
- E. Make the change programmatically via the public cloud CLI

Answer: D

Explanation:

You do not need to use different Terraform commands depending on the cloud provider you use. Terraform commands are consistent across different providers, as they operate on the Terraform configuration files and state files, not on the provider APIs directly.

NEW QUESTION # 165

Which of the following commands would you use to access all of the attributes and details of a resource managed by Terraform?

- A. terraform state show 'provider_type.name'
- B. terraform state list
- C. terraform state list 'provider_type.name'
- D. terraform get 'provider_type.name'

Answer: A

Explanation:

The terraform state show command allows you to access all of the attributes and details of a resource managed by Terraform. You can use the resource address (e.g. provider_type.name) as an argument to show the information about a specific resource. The terraform state list command only shows the list of resources in the state, not their attributes. The terraform get command downloads and installs modules needed for the configuration. It does not show any information about resources. References = [Command: state show] and

[Command: state list]

NEW QUESTION # 166

Terraform providers are always installed from the Internet.

- A. False
- B. True

Answer: A

Explanation:

Terraform providers are not always installed from the Internet. There are other ways to install provider plugins, such as from a local mirror or cache, from a local filesystem directory, or from a network filesystem.

These methods can be useful for offline or air-gapped environments, or for customizing the installation process. You can configure the provider installation methods using the provider_installation block in the CLI configuration file.

NEW QUESTION # 167

You're writing a Terraform configuration that needs to read input from a local file called id_rsa.pub . Which built-in Terraform function can you use to import the file's contents as a string?

- A. fileset<"id_rsa.pub")
- B. file("id_rsa.pub")
- C. filebase64("id_rsa.pub")
- D. templTefil("id_rsa.pub")

Answer: B

Explanation:

To import the contents of a local file as a string in Terraform, you can use the built-in file function. By specifying file("id_rsa.pub"), Terraform reads the contents of the id_rsa.pub file and uses it as a string within your Terraform configuration. This function is particularly useful for scenarios where you need to include file data directly into your configuration, such as including an SSH public key for provisioning cloud instances.

References = This information is a standard part of Terraform's functionality with built-in functions, as outlined in Terraform's official documentation and commonly used in various Terraform configurations.

NEW QUESTION # 168

Setting the TF_LOG environment variable to DEBUG causes debug messages to be logged into stdout.

- A. True
- B. False

Answer: A

Explanation:

Setting the TF_LOG environment variable to DEBUG causes debug messages to be logged into stdout, along with other log levels such as TRACE, INFO, WARN, and ERROR. This can be useful for troubleshooting or debugging purposes.

NEW QUESTION # 169

.....

Using Terraform-Associate-004 exam prep is an important step for you to improve your soft power. I hope that you can spend a little time understanding what our study materials have to attract customers compared to other products in the industry. Terraform-Associate-004 exam dumps have a higher pass rate than products in the same industry. If you want to pass Terraform-Associate-004 Certification, then it is necessary to choose a product with a high pass rate. Our study materials guarantee the pass rate from professional knowledge, services, and flexible plan settings. According to user needs, Terraform-Associate-004 exam prep provides everything possible to ensure their success.
