HP HPE7-A11 Valid Test Sims | Reliable HPE7-A11 Exam Question

Our HPE7-A11 simulating materials let the user after learning the section of the new curriculum can through the way to solve the problem to consolidate, and each section between cohesion and is closely linked, for users who use the HPE7-A11 exam prep to build a knowledge of logical framework to create a good condition. And our pass rate for HPE7-A11 learning guide is high as 98% to 100%, which is also proved the high-quality of our exam products. You can totally rely on our HPE7-A11 exam questions.

HPE Network Campus Access Professional Architect Exam Sample Questions (Q112-Q117):

NEW QUESTION # 112

Which platform can be used to demo your solution to a customer? (Select three.)

- A. Aruba Support Portal
- B. Aruba Demo Experience Platform
- C. Aruba Innovation Zone
- D. your own lab
- E. Aruba CX Switch Simulator
- F. Aruba Solution Exchange

Answer: B,C,E

Explanation:

To demonstrate a solution to a customer, three platforms that can be effectively used are the Aruba CX Switch Simulator (Option B), Aruba Innovation Zone (Option C), and Aruba Demo Experience Platform (Option F). The Aruba CX Switch Simulator provides a virtual environment where customers can interact with the Aruba OS-CX interface, allowing them to explore features and configurations without the need for physical hardware. The Aruba Innovation Zone offers a space for experiencing the latest Aruba technologies and solutions in action, showcasing their capabilities in real-world scenarios. The Aruba Demo Experience Platform is designed to give customers a comprehensive look at Aruba's solutions, enabling interactive demos and simulations that highlight the benefits and functionalities of the products. These platforms provide valuable resources for customers to understand and evaluate Aruba solutions in a controlled and informative environment.

NEW QUESTION # 113

Which is true with regard to device capabilities?

- **A. Aruba recommends 30-50 devices per radio for a generic office deployment.**
- B. Aruba's best practice is to use whatever the AP model supports as a maximum.
- C. You should determine if devices support 2.4 GHz or 5 GHz. No consideration is yet required for 6 GHz as it has yet to be ratified.
- D. Wi-Fi 6E supports 6 GHz for both indoor and outdoor deployments since it was ratified in April of 2020.

Answer: A

Explanation:

Aruba's recommendation for device density in a generic office environment is based on achieving optimal performance and user experience. The suggestion to support 30-50 devices per radio takes into account the typical bandwidth requirements, application usage, and performance expectations in an office setting. This range is designed to ensure that the wireless network can adequately support the number of devices without significant degradation in service quality. It balances the need for connectivity with the practical limits of wireless technology, ensuring that each device maintains a reliable connection and adequate throughput. This recommendation is part of Aruba's best practices for network design and deployment, aimed at providing efficient and effective wireless coverage in office environments.

NEW QUESTION # 114

What are two concerns for C-level executives and managerial stakeholders? (Choose two.)

- A. Which CX supported routing protocols can scale the network during an upcoming building addition to the campus?
- **B. What is the projected growth for the company and how will this affect critical business requirements?**
- **C. How to minimize the total cost of ownership which considering proposals for network expansion?**
- D. How to address admin support staff concerns with the additional training required for a non-homogeneous vendor approach?
- E. What management tool would enable simplified access to network resources?

Answer: B,C

Explanation:

C-level and managerial stakeholders focus on strategic and financial considerations, such as anticipated business growth and how it impacts requirements, as well as minimizing total cost of ownership when evaluating solutions.

NEW QUESTION # 115

A large multinational financial institution has contracted you to design a new full-stack wired and wireless network for their new 6-story regional office building. The bottom two floors of this facility will be retail space for a large banking branch. The upper floors will be carpeted office space for corporate users, each floor being approximately 100,000 sq ft (9290 sq m). Data centers are all offsite and will be out of scope for this project. The customer is underserved by its existing L2-based network infrastructure and would like to take advantage of modern best practices in the new design. The network should be fully resilient and fault-tolerant, with dynamic segmentation at the edge.

The retail space will include public guest Wi-Fi access. Retail associates will have corporate tablets for customer service, and there

will be a mix of wired and wireless devices throughout the retail floors. The corporate users will primarily use wireless for connectivity, but several wired clients, printers, and hard VoIP phones will be in use. The customer is also planning on renovating the corporate office space in order to take advantage of 'smart office' technology. These improvements will drive blue-dot wayfinding, presence analytics, and other location-based services. The client decided that they would like to manage two wiring closets as a single stack with a total of 10 switches and a minimum transport speed of 25Gbps over OM4 MM fiber. They would also like to keep the stacking cabling cost to a minimum. Which stacking components would be required to meet the customer's requirements in the most cost-effective way if the closets were 190 m (620 ft) apart? (Choose two.)

- A. 25G DAC cables
- B. SFP28 transceivers
- C. SFP56 transceivers
- D. 50G DAC cables

Answer: A,B

NEW QUESTION # 116

it has been identified that the client's existing network is having to retransmit packets due to possible hardware or configuration issues. A review of hardware configuration and transport reliability will need to be assessed prior to completing the new design. What should this phenomenon be classified as?

- A.
- B.
- C.

Answer: A

Explanation:

The phenomenon where packets have to be retransmitted due to possible hardware or configuration issues is classified as "Loss," depicted in Option B. Packet loss occurs when one or more packets of data traveling across a network fail to reach their destination, which can be caused by errors in data transmission, typically resulting from network congestion, hardware failure, or configuration errors. When packet loss occurs, protocols like TCP ensure that the data is retransmitted so that the integrity of the communication is maintained. In a network design, ensuring the reliability of hardware and proper configuration is critical to minimize packet loss.

NEW QUESTION # 117

.....

The actual HP HPE7-A11 exam questions are in PDF format for the one who wants to study offline. The actual HP HPE7-A11 exam questions are in simple PDF form. The PDF format is suitable both for smartphones as well as tablets. You can print documents and study anywhere. The plus point is that the PDF version is updated regularly to improve its HPE7-A11 Exam Questions and reflect changes in the syllabus of the exam.
