## Desktop IAPP CIPT Practice Test Software

It never needs an internet connection. Dumpcollection's Certified Information Privacy Technologist (CIPT) practice exam software has several mock exams, designed just like the real exam. IAPP CIPT practice exam software contains all the important questions which have a greater chance of appearing in the final exam. Dumpcollection always tries to ensure that you are provided with the most updated Certified Information Privacy Technologist (CIPT) (CIPT) Exam Questions to pass the exam on the first attempt.

IAPP CIPT (Certified Information Privacy Technologist) certification exam is designed to recognize individuals with expertise in the intersection of privacy and technology. CIPT exam is focused on testing the knowledge and skills necessary to implement and manage privacy in technology-based environments. The CIPT designation is a globally recognized certification that demonstrates a high level of technical expertise in privacy.

## IAPP Certified Information Privacy Technologist (CIPT) Sample Questions (Q245-Q250):

NEW QUESTION # 245

Which is NOT a way to validate a person's identity?

- A. Swiping a smartcard into an electronic reader.
- **B. Using a program that creates random passwords.**
- C. Answering a question about "something you know".
- D. Selecting a picture and tracing a unique pattern on it

**Answer: B**

Explanation:

Validating a person's identity typically involves methods such as something they know (e.g., a password or personal information), something they have (e.g., a smartcard), or something they are (e.g., biometric data). A program that creates random passwords does not validate identity; it merely generates passwords. Identity validation methods must involve a process where the individual proves who they are, such as through knowledge-based, possession-based, or biometric-based verification.

#### **NEW QUESTION # 246**

How should the sharing of information within an organization be documented?

- **A. With a data flow diagram**
- B. With a disclosure statement.
- C. With a binding contract.
- D. With a memorandum of agreement.

**Answer: A**

Explanation:

The sharing of information within an organization should be documented with a data flow diagram. A data flow diagram (DFD) visually represents the flow of data within a system, showing how data is processed and transferred between different parts of the organization. It helps to identify where data is stored, how it moves through various processes, and where it might be shared internally. This method provides a clear and comprehensive overview of data interactions, facilitating better understanding and management of data sharing practices.

Reference:

IAPP CIPT Study Guide: Data Flow Diagrams (DFD) as a tool for mapping data flows within an organization.  
GDPR, Article 30: Records of processing activities, which often use data flow diagrams for documentation.

#### **NEW QUESTION # 247**

What is a main benefit of data aggregation?

- **A. It allows one to draw valid conclusions from small data samples.**
- B. It is a good way to achieve de-identification and unlinkability.
- C. It applies two or more layers of protection to a single data record.
- D. It is a good way to perform analysis without needing a statistician.

**Answer: A**

Explanation:

Explanation/Reference:

#### **NEW QUESTION # 248**

Which of the following would be an example of an "objective" privacy harm to an individual, based on Calo's Harm Dimensions?

- A. Social media profile views indicating unexpected interest in a person.
- B. Personal data inaccuracies present in a user's social media profile.
- C. Negative feelings derived from government surveillance.
- **D. Receiving spam following the sale of an email address.**

**Answer: D**

Explanation:

Ryan Calo's Harm Dimensions categorize privacy harms into two types: objective and subjective. Objective privacy harms are tangible, measurable, and involve actual harm to individuals. Receiving spam following the sale of an email address is a concrete, quantifiable harm that directly impacts the individual by causing inconvenience and potential security risks. This contrasts with subjective harms, which are more about perceptions and feelings, such as negative feelings derived from government surveillance (option B). The IAPP documentation reflects this distinction by emphasizing the importance of identifying and mitigating objective harms to ensure robust privacy protections.

#### NEW QUESTION # 249

of the following best describes a network threat model and its uses?

- A. It is a risk-based model used to calculate the probabilities of risks identified during vulnerability tests.
- **B. It helps assess the probability, the potential harm, and the priority of attacks to help minimize or eradicate the threats.**
- C. It is used in software development to detect programming errors.
- D. It combines the results of vulnerability and penetration tests to provide useful insights into the network's overall threat and security posture.

**Answer: B**

Explanation:

A network threat model is a risk-based model used to evaluate potential threats to a network. It helps in assessing the probability of different types of attacks, the potential damage these attacks can cause, and the prioritization of these threats. By doing so, it aids in minimizing or eliminating the threats by focusing security efforts on the most significant risks. The threat model provides a structured approach to identify, categorize, and address threats based on their severity and impact. (Reference: IAPP CIPT Study Guide, Chapter on Threat Modeling)
