Our 2V0-11.25 real quiz boosts 3 versions: the PDF, the Software and the APP online which will satisfy our customers by their varied functions to make you learn comprehensively and efficiently. The learning of our 2V0-11.25 study materials costs you little time and energy and we update them frequently. We can claim that you will be ready to write your exam after studying with our 2V0-11.25 Exam Guide for 20 to 30 hours. To understand our 2V0-11.25 learning questions in detail, just come and try!

VMware 2V0-11.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Install, Configure, Administrate the VMware by Broadcom Solution: This section of the exam measures skills of the VMware Cloud Foundation administrator and covers the installation and configuration processes for VMware Cloud Foundation components, deploying and configuring management domains, NSX Edge Clusters, and the VMware Aria Suite Lifecycle. It assesses the ability to deploy workload domains, enable vSphere IaaS control plane, create vSphere namespaces, manage stretched clusters, and use VMware Cloud Foundation APIs. Candidates are also tested on scaling deployments, performing Day 2 operations like backup, recovery, lifecycle management, VM lifecycle management, configuring networking and storage, managing ESXi hosts, implementing encryption, and operationalizing VMware NSX, vSAN, and Aria Suite. The section is comprehensive, targeting those responsible for the ongoing administration and optimization of VMware environments.
Topic 2	<ul style="list-style-type: none"> • Plan and Design the VMware by Broadcom Solution: There are no testable objectives in this section. Still, it is intended for solution architects who need to plan and design VMware Cloud Foundation deployments, focusing on sizing, architecture selection, and network • storage design.
Topic 3	<ul style="list-style-type: none"> • VMware by Broadcom Solution: This section of the exam measures skills of the cloud administrator and covers identifying VMware Cloud Foundation components like vSphere, vSAN, and NSX, as well as their architecture, including stretched configurations. It also assesses knowledge of requirements for implementing private cloud solutions, use cases for VMware Aria Suite components, vSphere IaaS control plane, Data Services Manager, and VMware Cloud Foundation Add-Ons. The focus is on the ability to recognize and apply the correct VMware solutions for various enterprise scenarios.
Topic 4	<ul style="list-style-type: none"> • Troubleshoot and Optimize the VMware by Broadcom Solution: This section of the exam measures skills of the cloud infrastructure support engineer and covers diagnosing and resolving technical issues related to VMware Cloud Foundation deployment and operations. It includes troubleshooting the deployment process, vSphere, networking, vSAN, SDDC Manager, and Aria Suite. The section also evaluates the ability to optimize infrastructure performance, manage resources, and ensure efficient operation, focusing on the practical aspects of maintaining and enhancing VMware Cloud Foundation environments.

Topic 5	<ul style="list-style-type: none"> IT Architectures, Technologies, Standards: There are no testable objectives in this section. However, this area establishes the foundational knowledge expected of cloud administrators, such as understanding basic IT infrastructure, virtualization, and cloud models. This section is relevant for cloud administrators and infrastructure engineers.

2V0-11.25 Exam Torrent - VMware Cloud Foundation 5.2 Administrator Prep Torrent & 2V0-11.25 Test Guide

ActualVCE try hard to makes 2V0-11.25 exam preparation easy with its several quality features. Our 2V0-11.25 exam dumps come with 100% refund assurance. We are dedicated to your accomplishment, hence pledges you victory in 2V0-11.25 exam in a single attempt. If for any reason, a user fails in 2V0-11.25 exam then he will be refunded the money after the process. Also, we offer 1 year free updates to our 2V0-11.25 Exam esteemed users; and these updates will be entitled to your account right from the date of purchase. Also the 24/7 Customer support is given to users, who can email us if they find any haziness in the 2V0-11.25 exam dumps, our team will merely answer to your all 2V0-11.25 exam product related queries.

VMware Cloud Foundation 5.2 Administrator Sample Questions (Q117-Q122):

NEW QUESTION # 117

An administrator needs to configure an ESXi host and create a host profile to ensure consistent configuration across multiple hosts in a cluster.

Which three steps are necessary to achieve this? (Choose three.)

- A. Apply the host profile to all hosts in the cluster.
- B. Remediate the non-compliant hosts to ensure they match the host profile.
- C. Manually configure each host to match the reference host settings.
- D. Configure the desired settings on a reference ESXi host.
- E. Extract the host profile from the configured reference host.

Answer: B,D,E

Explanation:

First, configure the desired settings on a reference ESXi host. This host will be used as the template for creating a consistent configuration across the cluster.

After configuring the reference host, extract the host profile from it. This captures the configuration of the reference host as a host profile.

Remediation is necessary to ensure that other hosts in the cluster align with the reference host's configuration.

The host profile can be applied, and remediation will correct any non-compliant settings on other hosts.

NEW QUESTION # 118

An administrator has been tasked with updating the version of VMware Tools on virtual machines that have been migrated into a VMware Cloud Foundation (VCF) instance so that they are compliant with the company's security policies. The following information is shared with the administrator about this task:

The VMs have been migrated from environments running earlier releases of vSphere.

The VMs are spread across multiple clusters within a single workload domain in the VCF instance.

The upgrade must not initiate a reboot of the VMs to avoid downtime to the business.

Which three steps should the administrator perform in order to complete this task? (Choose three.)

- **A. Select the Set Auto Update option and set its value to On.**
- B. Use SDDC Manager in the management domain to initiate the upgrade.
- C. Select the VI workload domain so that all VMs across all clusters are automatically selected.
- **D. Use vSphere Lifecycle Manager in the VI workload domain vCenter to initiate the upgrade.**
- E. Select the cluster hosting the VMs to upgrade.
- **F. Select the Upgrade to Match Host option.**

Answer: A,D,F

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

As defined in the VMware Cloud Foundation Administration Guide and vSphere Lifecycle Manager official documentation, the correct way to upgrade VMware Tools at scale across multiple clusters and without initiating a VM reboot is as follows:

B . Use vSphere Lifecycle Manager in the VI workload domain vCenter to initiate the upgrade.

The official guidance is to use vSphere Lifecycle Manager (vLCM) for managing VMware Tools versions across VMs. This tool allows you to select multiple clusters or the entire workload domain and execute VMware Tools upgrades centrally.

D . Select the Upgrade to Match Host option.

The "Upgrade to Match Host" setting in vSphere Lifecycle Manager is specifically designed to align the VMware Tools version in the guest with the version included with the ESXi host, and can be applied without a forced VM reboot. The upgrade will complete the next time VMware Tools starts or during the next guest OS reboot or shutdown initiated by the user or other processes.

F . Select the Set Auto Update option and set its value to On.

The "Auto Update" option for VMware Tools, when set to On, allows VMware Tools to automatically update to the latest version whenever the VM is powered on or rebooted, without requiring the administrator to intervene or force a downtime event.

Why Not the Other Options?

A . Selecting the VI workload domain alone does not guarantee a compliant upgrade process; the upgrade must be triggered via Lifecycle Manager with the proper options set.

C . Selecting a single cluster would not meet the requirement for VMs spread across multiple clusters.

E . SDDC Manager does not manage or trigger VMware Tools upgrades at the VM level.

Summary:

To upgrade VMware Tools on all relevant VMs in a VCF workload domain, and to do so without forced reboots, the administrator should:

Use vSphere Lifecycle Manager in the VI workload domain vCenter (B),

Select the Upgrade to Match Host option (D),

And enable Auto Update for VMware Tools (F).

This method is fully supported by official VMware best practices and documentation.

NEW QUESTION # 119

An administrator is tasked with deploying a new application that requires both virtual machines and containers.

Which two components of VMware Cloud Foundation would be utilized to provide a unified platform for managing these workloads? (Choose two.)

- **A. NSX**
- B. Aria Suite Lifecycle
- **C. Aria Operations**
- D. HCX
- E. IaaS Control Plane

Answer: A,C

NEW QUESTION # 120

An administrator needs to ensure that all ESXi hosts in a cluster have a consistent configuration.

Which three steps are necessary to achieve this? (Choose three.)

- **A. Attach the host profile to all hosts in the cluster.**
- **B. Configure the desired settings on an ESXi host.**
- C. Detach the host profile from all hosts in the cluster.
- D. Right-click the host profile from the reference host and select duplicate host profile.

- E. Manually configure each host to match the reference host settings.
- F. Extract the host profile from the configured reference host.

Answer: A,B,F

Explanation:

You extract a host profile from the reference host that has the desired configuration.

Before extraction, you configure the reference ESXi host with the settings you want standardized.

You attach the extracted host profile to all other hosts in the cluster to enforce a consistent configuration.

NEW QUESTION # 121

An administrator needs to deploy a Kubernetes cluster on a vSphere IaaS control plane (formerly vSphere with Tanzu) to host a new application.

Which three steps should be followed to successfully deploy the Kubernetes cluster? (Choose three.)

- A. , Deploy a vSphere Pod Service.
- B. Configure a Load Balancer for the Kubernetes control plane nodes.
- C. Create a new VM template for the Kubernetes nodes.
- D. Enable Workload Management on the vSphere Cluster.
- E. Configure a vSphere Namespace and assign resource quotas.

Answer: B,D,E

Explanation:

A Load Balancer is needed for the Kubernetes control plane nodes to distribute traffic across the control plane and ensure high availability for the Kubernetes management layer.

A vSphere Namespace must be configured to define a logical boundary for Kubernetes workloads, and resource quotas help ensure that resources are allocated appropriately for the workloads.

Enabling Workload Management on the vSphere Cluster is necessary to integrate Kubernetes with vSphere and manage the lifecycle of Kubernetes clusters using vSphere with Tanzu.

NEW QUESTION # 122

.....

It is known to us that the error correction is very important for these people who are preparing for the 2V0-11.25 exam in the review stage. It is very useful and helpful for a lot of people to learn from their mistakes, because many people will make mistakes in the same way, and it is very bad for these people to improve their accuracy. If you want to correct your mistakes when you are preparing for the 2V0-11.25 Exam, the study materials from our company will be the best choice for you.
