Salesforce Certified MuleSoft Integration Associate Exam Sample Questions (Q37-Q42):

NEW QUESTION # 37
According to MuleSoft what is a major distinguishing characteristic of an application network m relation to the integration of systems, data, and devices?

- A. It leverages well-accepted internet standards like HTTP and JSON
- B. It uses CJ/CD automation for real-time project delivery
- C. It uses a well-organized monolithic approach with standards

- D. It is built for change and self-service

Answer: D

Explanation:
An application network, as envisioned by MuleSoft, is designed to be dynamic and self-service, enabling rapid adaptation to changing business needs. Here's a detailed explanation:
* Built for Change:
* Flexibility: An application network allows for the easy addition, modification, and removal of services without disrupting existing functionalities.
* Modular Architecture: Promotes a modular approach where services and APIs can be independently developed, deployed, and managed.
* Self-Service:
* Empowerment: Enables different teams (e.g., developers, business units) to access and use APIs and services without heavy reliance on central IT.
* API-led Connectivity: Facilitates a self-service model where reusable APIs are available for various teams to integrate and build upon, accelerating innovation and reducing time-to-market.
* Characteristics:
* Decentralization: Unlike monolithic architectures, an application network supports decentralized development and deployment.
* Reusability and Discoverability: Services and APIs are designed to be easily discoverable and reusable across different parts of the organization.

NEW QUESTION # 38
What is a defining characteristic of an Integration-Platform-as-a-Service (iPaaS)?

- A. Cloud-based
- B. No-code
- C. Code-first
- D. On-premises

Answer: A

Explanation:
An Integration-Platform-as-a-Service (iPaaS) is characterized by being a cloud-based solution that provides tools to develop, execute, and manage integration flows connecting multiple applications and data sources.
Here's a detailed explanation:
* iPaaS:
* Definition: A suite of cloud services enabling the development, execution, and governance of integration flows.
* Deployment: Delivered and managed entirely in the cloud, offering high availability and scalability.
* Characteristics:
* Cloud-based: The platform is hosted on the cloud, allowing users to access and utilize the integration tools from anywhere with an internet connection.
* Managed Services: iPaaS providers handle infrastructure maintenance, updates, and security, freeing users to focus on integration development.
* Scalability: Easily scales to meet the demands of growing businesses without requiring additional on-premises infrastructure.

NEW QUESTION # 39
An organization is choosing between API-led connectivity and other integration approaches According to MuleSoft which business benefit is associated with an API-led connectivity approach using Anypoint Platform?

- A. Greater project predictability through tight coupling of systems
- B. Higher outcome repeatability through centralized development
- C. Increased developer productivity through self-service of API assets

- D. Improved security through adoption of monolithic architectures

Answer: C

Explanation:
API-led connectivity is an approach that emphasizes the reuse of APIs to enhance agility and productivity.
Here's a detailed explanation of the associated business benefits:
* Self-Service of API Assets:
* Definition: API-led connectivity enables developers to discover, access, and use APIs through a centralized platform like Anypoint Exchange, promoting self-service.
* Productivity: Developers can quickly find and integrate existing APIs, reducing the time and effort required to build new functionalities from scratch.
* Business Benefits:
* Reusability: Encourages the reuse of APIs across projects, leading to faster development cycles and reduced duplication of efforts.
* Agility: Enhances the ability to respond to changing business needs by providing a flexible and modular integration framework.
* Scalability: Facilitates the scaling of integration solutions as business requirements grow.

NEW QUESTION # 40
A developer needs to discover which API specifications have been created within the organization before starting a new project
Which Anypoint Platform component can the developer use to find and try out the currently released API specifications?

- A. Anypoint Exchange
- B. Object Store
- C. Runtime Manager
- D. API Manager

Answer: A

Explanation:
When a developer needs to discover which API specifications have been created within the organization before starting a new project, Anypoint Exchange is the component to use. Here's a detailed explanation:
* Anypoint Exchange:
* Purpose: Provides a centralized repository where developers can find and access API specifications, connectors, templates, and other reusable assets.
* API Specifications: Developers can search for API specifications defined using RAML or OAS, review their details, and try them out using provided mock services.
* Capabilities:
* Search and Discovery: Easily search for and discover existing API specifications within the organization.
* Try Out APIs: Provides tools to interact with and test APIs directly from the Exchange, allowing developers to understand the API's functionality and behavior.
* Documentation: Access detailed documentation and examples for each API specification.
