

F5CAB1 - BIG-IP Administration Install, Initial Configuration, and Upgrade—Efficient Exam Simulator Online

Score Report

F5CAB1 - BIG-IP Administration Install,
Initial Configuration, and Upgrade

Exam Score Report

Date Tested: 12/28/2025

Candidate: [REDACTED]

Thank you for completing the F5CAB1 -
BIG-IP Administration Install, Initial
Configuration, and Upgrade exam. Based
on preliminary exam scoring, you have
Passed.

This is a preliminary result. Your exam
results can be found in the Education
Services Portal within 24 hours.

P.S. Free 2026 F5 F5CAB1 dumps are available on Google Drive shared by itPass4sure: <https://drive.google.com/open?id=1EwwHs3abrDkQcpmGIhaLn-7mmiuDUYel>

Our F5CAB1 quiz torrent can provide you with a free trial version, thus helping you have a deeper understanding about our F5CAB1 test prep and estimating whether this kind of study material is suitable to you or not before purchasing. With the help of our

trial version, you will have a closer understanding about our F5CAB1 exam torrent from different aspects, ranging from choice of three different versions available on our test platform to our after-sales service. Otherwise you may still be skeptical and unintelligible about our F5CAB1 Test Prep. So as you see, we are the corporation with ethical code and willing to build mutual trust between our customers.

As is known to us, there are best sale and after-sale service of the F5CAB1 study materials all over the world in our company. Our company has employed a lot of excellent experts and professors in the field in the past years, in order to design the best and most suitable F5CAB1 study materials for all customers. More importantly, it is evident to all that the F5CAB1 study materials from our company have a high quality, and we can make sure that the quality of our products will be higher than other study materials in the market. If you want to pass the F5CAB1 Exam and get the related certification in the shortest time, choosing the F5CAB1 study materials from our company will be in the best interests of all people. We can make sure that it will be very easy for you to pass your exam and get the related certification in the shortest time that beyond your imagination.

2026 100% Free F5CAB1 –Trustable 100% Free Exam Simulator Online | New BIG-IP Administration Install, Initial Configuration, and Upgrade Test Voucher

In order to meet the needs of all customers, our company employed a lot of leading experts and professors in the field. These experts and professors have designed our F5CAB1 exam questions with a high quality for our customers. We can promise that our products will be suitable for all people. As long as you buy our F5CAB1 practice materials and take it seriously consideration, we can promise that you will pass your exam and get your certification in a short time. So choose our F5CAB1 exam questions to help you review, you will benefit a lot from our F5CAB1 study guide.

F5 BIG-IP Administration Install, Initial Configuration, and Upgrade Sample Questions (Q49-Q54):

NEW QUESTION # 49

What will setting a Self-IP to "Allow None" for Port Lockdown do?

- A. Default allow port 1026 access between peer devices and traffic processing across the network failover.
- B. Block HA communications, causing the systems to report their peer as online ready.
- **C. Block HA communications, causing the systems to report their peer as offline and go active- active.**

Answer: C

Explanation:

The Port Lockdown feature controls which services a Self-IP will respond to.

Setting a Self-IP to Allow None means:

The Self-IP will not accept any traffic except the very limited, hard-coded HA ports such as TCP 4353 used for device trust and configuration sync.

All other HA ports, including those needed for network failover and other HA mechanisms, are blocked.

When essential HA services cannot communicate, each device assumes its peer is down.

This results in:

HA failover misbehavior

Both devices thinking the other is offline

Potential active-active condition, which is not intended and can cause traffic disruption Thus, Allow None can break HA functionality unless the Self-IP is not used for HA links.

NEW QUESTION # 50

What is the default IP address of a newly installed BIG-IP system?

- A. 192.168.100.1
- **B. 192.168.1.245**
- C. 192.168.0.1
- D. 10.0.0.1

Answer: B

Explanation:

The default management IP address for a newly installed F5 BIG-IP system is 192.168.1.245.

NEW QUESTION # 51

What will setting a Self IP to "Allow None" for Port Lockdown do?

- A. Default allow port 1026 access between peer devices and traffic processing across the network failover.
- **B. Block HA communications, causing the systems to report their peer as offline and go active-active.**
- C. Block HA communications, causing the systems to report their peer as online ready.

Answer: B

Explanation:

The Port Lockdown feature controls which services a Self-IP will respond to.

Setting a Self-IP to Allow None means:

* The Self-IP will not accept any traffic except the very limited, hard-coded HA ports such as TCP 4353 used for device trust and configuration sync.

* All other HA ports, including those needed for network failover and other HA mechanisms, are blocked.

When essential HA services cannot communicate, each device assumes its peer is down.

This results in:

* HA failover misbehavior

* Both devices thinking the other is offline

* Potential active-active condition, which is not intended and can cause traffic disruption. Thus, Allow None can break HA functionality unless the Self-IP is not used for HA links.

NEW QUESTION # 52

The Configuration Utility of a BIG-IP device is currently accessible via its management IP 10.53.1.245 from all VLANs.

The BIG-IP Administrator needs to restrict access so only hosts from the 10.0.0.0/24 subnet can access the Configuration Utility. Which TMSH command accomplishes this?

- A. `(tmsh)# modify /ltm httpd allow replace-all-with {10.0.0.0/24}`
- B. `(tmsh)# create /net acl MGMT.HTTP rule add { (permit tcp 10.0.0.0 0.0.0.255 host 10.53.1.245 http) }`
- C. `(tmsh)# create /net acl MGMT.HTTP rule add { (permit tcp 10.0.0.0/24 10.53.1.245 http) (deny ip any any http) }`
- **D. `(tmsh)# modify /sys httpd allow replace-all-with {10.0.0.0/24}`**

Answer: D

Explanation:

BIG-IP controls access to the web-based Configuration Utility (TMUI) through the `/sys httpd allow` list. This parameter specifies which client IPs or subnets may initiate HTTP/HTTPS connections to the management interface.

To restrict TMUI access to only the 10.0.0.0/24 subnet:

The correct method is to modify the HTTPD allow list so that it contains only this subnet.

This requires replacing the entire current list with the new subnet using:

```
modify /sys httpd allow replace-all-with {10.0.0.0/24}
```

This ensures that only clients within 10.0.0.0/24 can reach the Configuration Utility.

NEW QUESTION # 53

Given that `BIGIP-<version>.iso` and `Hotfix-BIGIP-<version>-ENG.iso` have been uploaded to `/shared/images` on an F5 device, what is the appropriate `tmsh` command to prepare and update the BIG-IP device with the hotfix of a software version on a new volume HD1.2?

(Choose one.)

- A. `tmsh create /sys software hotfix Hotfix-BIGIP-<version>-ENG.iso volume HD1.2`
- **B. `tmsh install /sys software BIGIP-<version>.iso hotfix Hotfix-BIGIP-<version>-ENG.iso create-volume HD1.2`**

- C. `tmsh install /sys software hotfix Hotfix-BIGIP-<version>-ENG.iso create-volume HD1.2`
- D. `tmsh copy /sys software hotfix Hotfix-BIGIP-<version>-ENG.iso volume HD1.2`

Answer: B

Explanation:

When installing a BIG-IP software version with a HotFix on a new boot volume, F5 requires that both the base TMOS image and the HotFix image be installed together as part of the same installation workflow.

The correct process is:

- * Specify the base TMOS ISO
- * Specify the HotFix ISO that corresponds to that base version
- * Instruct the system to create a new boot volume
- * Install both images into that new volume

This is achieved with the following tmsh syntax:

`tmsh install /sys software BIGIP-<version>.iso hotfix Hotfix-BIGIP-<version>-ENG.iso create-volume HD1.2` This command:

- * Installs the base image first
- * Applies the HotFix on top of the base image
- * Creates and installs everything on HD1.2
- * Leaves the currently active volume untouched for rollback

Why the other options are incorrect

A). Installing only the hotfix

A HotFix cannot be installed by itself on a new volume. A base image must already be present.

C). Using create instead of install

The create keyword is not valid for software installation operations.

D). Using copy

The copy command does not install software images or hotfixes.

NEW QUESTION # 54

.....

Normally IT workers have two purposes to test for certification: one is just for certification as of job demand; two is setting one goal for striving. Why do you try our F5CAB1 new exam guide materials? Our products are valid tested by more than 6000 candidates and can help you clear exam certainly. Forget your puzzled and distressed mood, choosing our F5 F5CAB1 new exam guide materials will help you success without any doubt.
