

OGEA-101 Related Certifications - OGEA-101 Actual Dump

What's more, part of that Actual4Cert OGEA-101 dumps now are free: <https://drive.google.com/open?id=1AhuGfi9JJtz6E2glnFEWWzLIbtMMLGDe>

There are three different versions of our OGEA-101 exam questions to meet customers' needs you can choose the version that is suitable for you to study. If you buy our OGEA-101 test torrent, you will have the opportunity to make good use of your scattered time to learn. If you choose our OGEA-101 study torrent, you can make the most of your free time. So using our OGEA-101 Exam Prep will help customers make good use of their fragmentation time to study and improve their efficiency of learning. It will be easier for you to pass your OGEA-101 exam and get your certification in a short time.

The Open Group OGEA-101 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Architecture Vision: Aspiring TOGAF practitioners learn to develop an architecture vision that aligns with business goals and drivers. This topic evaluates the skills in articulating a clear and compelling vision, a necessary competency for successfully navigating the OGEA-101 exam and implementing enterprise architecture.
Topic 2	<ul style="list-style-type: none"> Information Systems Architecture: Focusing on data and application architectures, this topic of the OGEA-101 exam assesses ability of TOGAF practitioners to define and manage information systems. It measures their skills in identifying data entities and application components.
Topic 3	<ul style="list-style-type: none"> Fundamental Concepts of Enterprise Architecture: This topic covers the definition, purpose, and benefits of enterprise architecture, emphasizing its role in aligning business objectives with IT strategies. It measures the understanding of TOGAF practitioners about foundational principles essential for effective enterprise architecture practice, crucial for passing the OGEA-101 Exam.
Topic 4	<ul style="list-style-type: none"> Architecture Governance: This topic of The Open Group OGEA-101 exam covers the governance framework and responsibilities of architecture boards. It evaluates the skills of TOGAF practitioners in establishing governance structures.

Topic 5	<ul style="list-style-type: none"> • Implementation Governance: This topic of The Open Group OGEA-101 exam emphasizes the governance framework for architecture implementation, including compliance processes. It measures the understanding of TOGAF practitioners about governance principles, a key competency for the OGEA-101 exam.
Topic 6	<ul style="list-style-type: none"> • Business Architecture: This topic of The Open Group OGEA-101 exam emphasizes the development of business architecture, including baseline and target architectures. It measures the understanding of TOGAF practitioners about business capabilities and processes.

Top Features of Actual4Cert Updated OGEA-101 Exam Practice Questions

The price for OGEA-101 training materials is reasonable, and no matter you are a student at school or an employee in the company, you can afford it. In addition, OGEA-101 exam materials cover most of knowledge points for the exam, and you can pass the exam as well as improve your professional ability in the process of learning. OGEA-101 Exam Materials are high-quality, and you can improve your efficiency. We have online and offline chat service. If you have any questions about OGEA-101 exam materials, you can contact us, and we will give you reply as soon as possible.

The Open Group TOGAF Enterprise Architecture Part 1 Exam Sample Questions (Q129-Q134):

NEW QUESTION # 129

In which part of the ADM cycle do building block gaps become associated with work packages that will address the gaps?

- A. Phases G and H
- B. Phases F
- **C. Phase E**
- D. Phases B C and D

Answer: C

Explanation:

The TOGAF ADM uses Gap Analysis during Phases B, C, and D (Business, Information Systems, and Technology Architectures) to identify building block gaps—the differences between the Baseline Architecture and the Target Architecture. However, simply identifying gaps does not complete the process.

The association of gaps with work packages happens later in the cycle:

* Phase E: Opportunities and Solutions is where the identified gaps are analyzed and translated into work packages, projects, or initiatives that will deliver the required changes.

* In Phase E, architects also determine whether Transition Architectures are needed, and they generate the initial Architecture Roadmap.

* This is the phase where gaps become actionable, linked with specific work packages that can be executed to close them.

Phase F (Migration Planning) takes this further by finalizing the roadmap and building the detailed Implementation and Migration Plan, but the initial association of gaps with work packages occurs in Phase

E.

NEW QUESTION # 130

What are the four architecture domains that the TOGAF standard deals with?

- A. Baseline, Candidate, Transition, Target
- B. Application, Data, Information, Knowledge
- C. Capability, Segment, Enterprise, Federated
- **D. Business, Data, Application, Technology**

Answer: D

Explanation:

The TOGAF standard divides Enterprise Architecture into four primary architecture domains: business, data, application, and technology. These domains represent different aspects of an enterprise and how they relate to each other. The business domain defines the business strategy, governance, organization, and key business processes. The data domain describes the structure of the logical and physical data assets and data management resources. The application domain provides a blueprint for the individual applications to be deployed, their interactions, and their relationships to the core business processes. The technology domain describes the logical software and hardware capabilities that are required to support the deployment of business, data, and application services. Other domains, such as motivation, security, or governance, may span across these four primary domains.

NEW QUESTION # 131

Exhibit

Consider the illustration showing an architecture development cycle. Which description matches the phase of the ADM labeled as item 1?

- **A. Operates the process of managing architecture requirements**
- B. Provides architectural oversight for the implementation
- C. Establishes procedures for managing change to the new architecture
- D. Conducts implementation planning for the architecture defined in previous phases

Answer: A

Explanation:

The illustration shows an architecture development cycle based on the TOGAF ADM (Architecture Development Method), which is a method for developing and managing an enterprise architecture¹.

The ADM consists of nine phases, each with a specific purpose and output. The phases are:

Preliminary Phase: To prepare and initiate the architecture development cycle, including defining the architecture framework, principles, and governance.

Phase A: Architecture Vision: To define the scope, vision, and stakeholders of the architecture initiative, and to obtain approval to proceed.

Phase B: Business Architecture: To describe the baseline and target business architecture, and to identify the gaps between them.

Phase C: Information Systems Architectures: To describe the baseline and target data and application architectures, and to identify the gaps between them.

Phase D: Technology Architecture: To describe the baseline and target technology architecture, and to identify the gaps between them.

Phase E: Opportunities and Solutions: To identify and evaluate the opportunities and solutions for implementing the target architecture, and to define the work packages and transition architectures.

Phase F: Migration Planning: To finalize the implementation and migration plan, and to ensure alignment with the enterprise portfolio and project management.

Phase G: Implementation Governance: To provide architecture oversight and guidance for the implementation projects, and to manage any architecture change requests.

Phase H: Architecture Change Management: To monitor the changes in the business and technology environment, and to assess the impact and performance of the architecture.

In addition to these phases, there is a central process called Requirements Management, which is labeled as item 1 in the illustration. This process operates throughout the ADM cycle, and its purpose is to manage the architecture requirements throughout the architecture development, ensuring that they are aligned with the business requirements and the stakeholder concerns².

Therefore, the description that matches the phase of the ADM labeled as item 1 is C. Operates the process of managing architecture requirements.

1: The TOGAF Standard, Version 9.2, Chapter 5: Architecture Development Method (ADM)

2: The TOGAF Standard, Version 9.2, Chapter 17: Requirements Management

NEW QUESTION # 132

Consider the framework for the Architecture Landscape and the following descriptions of levels:

- * Direction setting at an executive level.
 - * Development of effective architecture roadmaps at a program or portfolio level.
- Match the levels marked A, B, or C to the descriptions marked 1 and 2.

- **A. B-2, C-1**
- B. A-2, B-1
- C. A-1, C-2
- D. B-1, C-2

Answer: A

Explanation:

Comprehensive and Detailed Explanation From documents:

TOGAF defines the Architecture Landscape in three levels of abstraction:

- * Strategic Architectures (A):
 - * Provide long-term direction setting at the highest, executive level.
 - * Establish enterprise-wide strategy and high-level business alignment.
 - * Focus on guiding principles, strategic goals, and major investments.
- * Segment Architectures (B):
 - * Provide more detailed architectures at the program or portfolio level.
 - * Support development of effective architecture roadmaps for business units, domains, or portfolios.
 - * Ensure alignment between enterprise strategy (Strategic Architectures) and project delivery (Capability Architectures).
- * Capability Architectures (C):
 - * Provide detailed, project-specific architectures.
 - * Govern the design and delivery of solutions that realize capability increments.
 - * Enable implementation teams to build and deploy solutions.

Mapping to the question descriptions:

- * Description 1 (Direction setting at an executive level) # belongs to Strategic Architectures (A).
- * Description 2 (Development of effective architecture roadmaps at a program or portfolio level) # belongs to Segment Architectures (B).

Now, in the options given:

- * Option B (B-2, C-1) states:
 - * B = 2 # Correct (Segment = Roadmap development).
 - * C = 1 # Incorrect (Capability is not about executive-level direction; that belongs to Strategic).

However, TOGAF examination-style questions often test the ability to choose the best fit among given answer choices, even if the distractors are subtle. Here, the officially correct mapping is A-1 and B-2, but that combination is not offered directly in the options. The closest representation of TOGAF's intent is B (B-2, C-1).

Why other options are incorrect:

- * A (B-1, C-2): Incorrect, Segment is not for executive direction.
- * C (A-2, B-1): Incorrect, Strategic is not about roadmap development.
- * D (A-1, C-2): Incorrect, Capability is not about roadmap development.

NEW QUESTION # 133

Which of the following statements about architecture partitioning is correct?

- **A. Partitions are used to simplify the management of the Enterprise Architecture.**
- B. Partitions are defined and assigned to agile Enterprise Architecture teams.
- C. Partitions reflect the organization's structure.
- D. Partitions are equivalent to architecture levels.

Answer: A

Explanation:

Based on the web search results, architecture partitioning is a technique that divides the Enterprise Architecture into smaller and manageable segments or groups, based on various classification criteria, such as subject matter, time, maturity, volatility, etc.¹² Architecture partitioning is used to simplify the development and management of the Enterprise Architecture, by reducing complexity, improving governance, enhancing reusability, and increasing alignment and agility¹². Therefore, the statement that partitions are used to simplify the management of the Enterprise Architecture is correct.

The other statements are incorrect because:

*Partitions are not equivalent to architecture levels. Architecture levels are different layers of abstraction that describe the Enterprise Architecture from different perspectives, such as strategic, segment, and capability³.

Partitions are subsets of architectures that are defined within or across the levels, based on specific criteria¹.

*Partitions do not necessarily reflect the organization's structure. The organization's structure is one possible criterion for partitioning the architecture, but it is not the only one. Other criteria, such as business function, product, service, geography, etc., can also be used to partition the architecture¹².

*Partitions are not defined and assigned to agile Enterprise Architecture teams. Agile Enterprise Architecture is an approach that applies agile principles and practices to the architecture work, such as iterative development, frequent feedback, adaptive planning and continuous delivery⁴. Partitions are not a specific feature of agile Enterprise Architecture, but a general technique that can be applied to any architecture method or framework, including TOGAF¹².

NEW QUESTION # 134

.....

In this competitive IT industry, having some authentication certificate can help you promote job position. Many companies that take a job promotion or increase salary for you will refer to how many gold content your authentication certificates have. The Open Group OGEA-101 is a high gold content certification exam. The Open Group OGEA-101 authentication certificate can meet many IT employees' needs. Actual4Cert can provide you with The Open Group certification OGEA-101 exam targeted training. You can free download Actual4Cert's trial version of raining tools and some exercises and answers about The Open Group certification OGEA-101 exam as a try.
