## 2026 Updated NCP-MCA Reliable Exam Pattern | 100% Free NCP-MCA Latest Exam Price

We believe you will also competent enough to cope with demanding and professorial work with competence with the help of our NCP-MCA exam braindumps. Our experts made a rigorously study of professional knowledge about this NCP-MCA exam. So do not splurge time on searching for the perfect practice materials, because our NCP-MCA Guide materials are exactly what you need to have. Just come and buy our NCP-MCA practice guide, you will be a winner!

## Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) Sample Questions (Q48-Q53):

### NEW QUESTION # 48

An administrator is providing users with access to the company's LOB applications through a VDI solution. The administrator received information that the company are going to hire 200 new employees who will be using these applications. The environment is monitored by a third-party tool that notifies the administrator when the VDI solution is about to run out of capacity. This gives the administrator time to create additional resources and add them to the VDI solution. What should the administrator use when creating a playbook to automate this?

- A. A trigger based on an alert
- B. A trigger based on an event
- C. A trigger based on an email
- D. A trigger based on a REST API

**Answer: A**

### NEW QUESTION # 49

After an application is no longer needed, a user puts in a ticket to delete the VM. The administrator finds the VM in Prism Central and deletes it, but then realize that it was a Self-Service (formerly Calm) managed VM.

When the administrator attempts the application in Self-Service using the Delete action, it fails because the Substrate cannot be found.

How would the administrator delete the application from management?

- A. In the Audit view of the application, click Retry
- B. Execute the Delete action again, the second run will ignore the error.
- C. Execute the Soft Delete action to ignore the provide substrate.
- D. The platform Sync Service will remove the application.

**Answer: C**

Explanation:

When a VM managed by Self-Service (formerly Calm) is deleted manually from Prism Central, the associated application in Self-Service cannot be deleted using the standard delete action because the substrate is no longer present. In this scenario, the administrator should use the "Soft Delete" action in Self-Service, which will remove the application from management without requiring the substrate to be present.

Reference:

Nutanix documentation on Soft Delete.

Nutanix Best Practices for Managing Self-Service Applications.

### NEW QUESTION # 50

An administrator's environment has a complex Sysprep script that must be applied to all new VMs. Which feature could be used to accomplish this?

- A. Scheduler Policies
- B. Clone from Image Service
- C. Guest Customization
- D. Quota Management

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation

Nutanix Calm supports OS customization through Guest Customization, which:

- \* Applies Sysprep for Windows
- \* Injects configuration files
- \* Sets hostnames, time zones, networking, and more
- \* Runs scripts post-deployment

Sysprep is specifically executed during Windows Guest Customization.

Therefore, Option C: Guest Customization is correct.

### NEW QUESTION # 51

An administrator would like to scale out an existing Self-Service deployment.

What steps must the administrator take to accomplish this task using the Self-Service VM (SSVM)?

- A. 1. Backup existing SSVM 2. Deploy two additional SSVMs from OVA 3. Create a cluster using the three SSVMs 4. Enable Microservices Infrastructure
- B. 1. Backup existing SSVM 2. Automatically scale out SSVM via SSVM GUI 3. Restore SSVM config 4. Enable Microservices Infrastructure
- C. 1. Automatically scale out SSVM via SSVM GUI 2. Enable Microservices Infrastructure 3. Restore SSVM config from backup 4. Start SSVM cluster services
- **D. 1. Backup Self-Service on Prism Central 2. Deploy three new SSVMs from OVA 3. Restore Self-Service config from backup 4. Create SSVM cluster**

**Answer: D**

Explanation:

To scale out a Self-Service (formerly Calm) deployment from a single Self-Service VM (SSVM) to a multi-node cluster, the administrator must follow a migration-style procedure rather than an in-place expansion.

According to the Self-Service Administration and Operations Guide section on Setting up Scale-Out Self-Service VM:

\* Backup: The process involves destructive cluster commands, so the administrator must first take a backup of the existing Self-Service data.

\* Deploy New VMs: The administrator must deploy three new Self-Service VMs using the provided OVA

/template. This ensures a clean, uniform environment for the new cluster. (Adding nodes to an existing, potentially drifted single node is not the standard procedure).

\* Restore and Cluster: The administrator must then run the specific cluster creation commands (such as cluster create with the IPs of the three new nodes) and restore the Self-Service data and configuration from the backup to the new cluster to retain all projects, blueprints, and users.

While the exact order of "Restore" and "Cluster Create" involves technical nuance (creating the service capabilities then populating the data), the key differentiator is that the administrator must deploy three new SSVMs (Migrate) rather than just adding two to the existing one, and must explicitly perform a restore operation to migrate the data.

### NEW QUESTION # 52

What are the proper steps to create a Playbook?

- **A. 1. Access Intelligent Operations**  
**2. Create the playbook**  
**3. Select the playbook trigger**  
**4. Select the playbook action(s)**  
**5. Save & Close**
- B. 1. Access Self-Service  
2. Create the playbook  
3. Select the playbook action  
4. Select the playbook trigger(s)  
5. Save & Close
- C. 1. Access Self-Service  
2. Create the playbook  
3. Select the playbook trigger  
4. Select the playbook action(s)  
5. Save & Close
- D. 1. Access Intelligent Operations  
2. Create the playbook  
3. Select the playbook action  
4. Select the playbook trigger(s)  
5. Save & Close

**Answer: A**

Explanation:

Playbooks are a feature of Intelligent Operations (formerly Prism Pro or X-Play), not Nutanix Self-Service (formerly Calm).

Therefore, the first step is always to access the Intelligent Operations console in Prism Central.

The logical flow for defining an automation routine in a Playbook is Trigger first, then Action.

\* Select Trigger: The administrator must first define when the playbook runs (e.g., on an Alert, an Event, or Manually).

\* Add Actions: Once the trigger is established, the administrator defines what happens (e.g., Power off VM, Send Email, Slack Notification).

The correct order found in the Nutanix Intelligent Operations Guide is: Access Intelligent Operations > Create Playbook > Select Trigger > Add Actions > Save.

## NEW QUESTION # 53

.....

In order to provide a convenient study method for all people, our company has designed the online engine of the NCP-MCA study materials. The online engine is very convenient and suitable for all people to study, and you do not need to download and install any APP. We believe that the NCP-MCA study materials from our company will help all customers save a lot of installation troubles. You just need to have a browser on your device you can use our study materials. We can promise that the NCP-MCA Study Materials from our company will help you prepare for your exam well.
