

# Exam Databricks-Certified-Data-Engineer-Associate Torrent, Databricks-Certified-Data-Engineer-Associate Reliable Braindumps

The test software used in our products is a perfect match for Windows' Databricks-Certified-Data-Engineer-Associate learning material, which enables you to enjoy the best learning style on your computer. Our Databricks-Certified-Data-Engineer-Associate study materials also use the latest science and technology to meet the new requirements of authoritative research material network learning. Unlike the traditional way of learning, the great benefit of our Databricks-Certified-Data-Engineer-Associate Study Materials are that when the user finishes the exercise, he can get feedback in the fastest time.

A considerable amount of effort goes into our products. So in most cases our Databricks-Certified-Data-Engineer-Associate study materials are truly your best friend. On one hand, our Databricks-Certified-Data-Engineer-Associate study materials are the combination of the latest knowledge and the newest technology, which could constantly inspire your interest of study. On the other hand, our Databricks-Certified-Data-Engineer-Associate Study Materials can predict the exam correctly. Therefore you can handle the questions in the real exam like a cork. Through highly effective learning method and easily understanding explanation, you will pass the Databricks-Certified-Data-Engineer-Associate exam with no difficulty.

## Databricks-Certified-Data-Engineer-Associate Reliable Braindumps, Databricks-Certified-Data-Engineer-Associate Reliable Test Bootcamp

The modern Databricks world is changing its dynamics at a fast pace and has become so competitive. To stay updated and competitive in the market you have to learn new in-demand skills. With one Databricks Databricks-Certified-Data-Engineer-Associate exam certificate you can do this task nicely. With the Databricks Databricks-Certified-Data-Engineer-Associate Certification Exam successful candidates can validate their knowledge, increase marketability, enhance academic performance, improve reputation and increase earning power and other personal and professional benefits, etc.

## Databricks Certified Data Engineer Associate Exam Sample Questions (Q30-Q35):

### NEW QUESTION # 30

Which of the following is hosted completely in the control plane of the classic Databricks architecture?

- A. Databricks web application
- B. JDBC data source
- **C. Driver node**
- D. Worker node
- E. Databricks Filesystem

**Answer: C**

### NEW QUESTION # 31

An engineering manager uses a Databricks SQL query to monitor ingestion latency for each data source. The manager checks the results of the query every day, but they are manually rerunning the query each day and waiting for the results.

Which of the following approaches can the manager use to ensure the results of the query are updated each day?

- A. They can schedule the query to refresh every 1 day from the SQL endpoint's page in Databricks SQL.
- B. They can schedule the query to run every 12 hours from the Jobs UI.
- C. **They can schedule the query to refresh every 1 day from the query's page in Databricks SQL.**
- D. They can schedule the query to run every 1 day from the Jobs UI.
- E. They can schedule the query to refresh every 12 hours from the SQL endpoint's page in Databricks SQL.

**Answer: C**

### NEW QUESTION # 32

What is stored in a Databricks customer's cloud account?

- A. Databricks web application
- B. Notebooks
- C. **Data**
- D. Cluster management metadata

**Answer: C**

Explanation:

In a Databricks customer's cloud account, the primary elements stored include:

Data: This is the central type of content stored in the customer's cloud account. Data might include various datasets, tables, and files that are used and managed through Databricks platforms.

Notebooks: These are also stored within a customer's cloud account. Notebooks include scripts, notes, and other information necessary for data analysis and processing tasks.

Cluster management metadata is indeed managed through the cloud, but it's primarily handled by Databricks rather than stored directly in the customer's account. The Databricks web application itself is not stored within the customer's cloud account; rather, it's a service provided by Databricks.

### NEW QUESTION # 33

A data engineer has a single-task Job that runs each morning before they begin working. After identifying an upstream data issue, they need to set up another task to run a new notebook prior to the original task.

Which of the following approaches can the data engineer use to set up the new task?

- A. They can create a new task in the existing Job and then add the original task as a dependency of the new task.
- B. They can create a new job from scratch and add both tasks to run concurrently.
- C. They can create a new task in the existing Job and then add it as a dependency of the original task.
- D. They can clone the existing task in the existing Job and update it to run the new notebook.
- E. **They can clone the existing task to a new Job and then edit it to run the new notebook.**

**Answer: E**

### NEW QUESTION # 34

A data engineer has joined an existing project and they see the following query in the project repository:

```
CREATE STREAMING LIVE TABLE loyal_customers AS
```

```
SELECT customer_id -
```

```
FROM STREAM(LIVE.customers)
```

```
WHERE loyalty_level = 'high';
```

Which of the following describes why the STREAM function is included in the query?

- A. The STREAM function is not needed and will cause an error.
- B. The customers table is a reference to a Structured Streaming query on a PySpark DataFrame.
- **C. The customers table is a streaming live table.**
- D. The table being created is a live table.
- E. The data in the customers table has been updated since its last run.

**Answer: C**

Explanation:

The STREAM function is used to process data from a streaming live table or view, which is a table or view that contains data that has been added only since the last pipeline update. Streaming live tables and views are stateful, meaning that they retain the state of the previous pipeline run and only process new data based on the current query. This is useful for incremental processing of streaming or batch data sources. The customers table in the query is a streaming live table, which means that it contains the latest data from the source. The STREAM function enables the query to read the data from the customers table incrementally and create another streaming live table named loyal\_customers, which contains the customer IDs of the customers with high loyalty level.
