mind, you can try to free download part of the exam practice questions and answers about SAP Certification C-CPI-2506 Exam online.

SAP Certified Associate - Integration Developer Sample Questions (Q35-Q40):

NEW QUESTION # 35

What are the maturity levels of the SAP Integration Solution Advisory Method-ology? Note: There are 2 answers to this question.

- A. Assess your integration strategy
- B. Enable your integration structure.
- C. Design your hybrid integration platform.
- D. Implement your integration architectural strategy.

Answer: A,C

Explanation:

The maturity levels of the SAP Integration Solution Advisory Methodology are as follows:

Assess your integration strategy. This level helps you evaluate your current integration landscape and identify the gaps and challenges that need to be addressed.

Design your hybrid integration platform. This level helps you define your target integration architecture and select the best-fit integration technologies and tools for your scenarios.

Implement your integration architectural strategy. This level helps you execute your integration projects and deliver value to your business.

Enable your integration structure. This level helps you establish a governance model and best practices for your integration operations and maintenance. Reference: Integration Software | SAP Integration Suite, Modernize Integration with SAP Integration Suite | openSAP

NEW QUESTION # 36

What are some aspects of "holistic integration" of the SAP Integration Suite? Note: 3 answers are correct.

- A. Domain Integration
- B. Data Integration
- C. Cloud Integration
- D. Process Integration
- E. Event Integration

Answer: B,D,E

Explanation:

Some aspects of "holistic integration" of the SAP Integration Suite are process integration, event integration, and data integration.

Process integration refers to the orchestration and automation of business processes across different systems and applications. Event integration refers to the communication and coordination of events between different sources and consumers. Data integration refers to the extraction, transformation, and loading of data between different sources and targets. NEW QUESTION # 37

You use an APIKey for authentication in an HTTPS API call. In which part of the Content Modifier is the APIKey included?

- A. Attachment
- B. Message body
- C. Message header
- D. Exchange property

Answer: C

Explanation:

When using API Key authentication for HTTP(S) calls in SAP Integration Suite:

The API Key is typically included in the HTTP header (e.g., APIKey: <value> or x-api-key: <value>).

Message headers are configured in the Content Modifier for outbound requests.

Other options:

Attachment # Used for file handling, not authentication.

Message body # Contains payload, not credentials.

Exchange property # Used internally within the flow, not sent externally.

Thus, the API Key must be placed in the Message header.

NEW QUESTION # 38

You are using a Data store Operation of the type Write. Which parameter must you select to avoid duplicate entries?

- **A. Overwrite Existing Message**
- B. Include Message Headers
- C. Retention Threshold for Alerting
- D. Encrypted stored Message

Answer: A

Explanation:

To avoid duplicate entries when using a Data Store Operation of the type Write, you must select the Overwrite Existing Message parameter. The Overwrite Existing Message parameter allows you to overwrite an existing data store entry with the same key if it already exists. If you do not select this parameter, the Write operation will fail if there is a duplicate key in the data store. Reference: Modernize Integration with SAP Integration Suite | openSAP

NEW QUESTION # 39

You want to access individual entities of an HTTP call over XPath. What must you do if no namespace mapping exists?

- A. Convert the namespaces to JSON.
- B. Convert the namespaces to XML
- **C. Remove the namespaces.**
- D. Remove the XML prolog

Answer: C

Explanation:

If no namespace mapping exists, you must remove the namespaces to access individual entities of an HTTP call over XPath.

Namespaces are prefixes that identify the source or context of an XML element or attribute. If the namespaces are not mapped to a URI, they can cause errors or conflicts when using XPath expressions. Therefore, you must remove the namespaces before applying XPath queries.
