

Neueste Identity-Security-Administrator Pass Guide & neue Prüfung Identity-Security-Administrator braindumps & 100% Erfolgsquote

Unsere Schulungsunterlagen können Ihre Kenntnisse vor der SailPoint Identity-Security-Administrator Prüfung testen und auch Ihr Verhalten in einer bestimmten Zeit bewerten. Wir geben Ihnen Anleitung zu Ihrer Note und Schwachpunkt, so dass Sie Ihre Schwäche nachholen können. Die Lernhilfe zur SailPoint Identity-Security-Administrator Zertifizierungsprüfung von It-Pruefung stellen Ihnen unterschiedliche logische Themen vor. So können Sie nicht nur lernen, sondern auch andere Techniken und Subjekte kennen lernen. Wir versprechen, dass unsere SailPoint Identity-Security-Administrator Schlungsunterlagen von der Praxis bewährt werden. It-Pruefung hat genügende Vorbereitung für Ihre Prüfung getroffen. Unsere Fragen sind umfassend und der Preis ist rational.

SailPoint Identity-Security-Administrator Exam Syllabus Topics:

Section	Objectives
Platform Management	- Virtual Appliance management • 1. Health monitoring • 2. Deployment and connectivity - Tenant administration • 1. Organization settings • 2. Administrative configuration

Access Management	- Access requests • 1. Approval workflows • 2. Request lifecycle - Access profiles and roles • 1. Entitlement management • 2. Role modeling
Governance and Compliance	- Policies and analytics • 1. Governance reporting • 2. Policy violations - Certification campaigns • 1. Manager and application owner certifications • 2. Access reviews
Provisioning	- Application onboarding • 1. Account aggregation • 2. Source configuration - Provisioning operations • 1. Create, modify, disable accounts • 2. Provisioning policies
Identity and Lifecycle Management	- Identity profiles • 1. Authoritative sources • 2. Identity attributes - Lifecycle events • 1. Automated lifecycle workflows • 2. Joiner, Mover, Leaver processes

>> Identity-Security-Administrator Fragen Und Antworten <<

SailPoint Identity-Security-Administrator Unterlage & Identity-Security-Administrator Exam Fragen

Das Leben ist mit den Wahlen gefüllt. Wahl kann nicht unbedingt Ihnen das absolute Glück bringen, aber sie kann Ihnen viele Chancen bringen. Wenn Sie die Chance verpasst haben, können Sie nur bereuen. Die Fragenpool zur SailPoint Identity-Security-Administrator Zertifizierungsprüfung von It-Pruefung sind die Grundbedarfsbedürfnisse für jeden Kandidaten. Mit ihr können Sie alle Probleme lösen. Die Fragenpool zur SailPoint Identity-Security-Administrator Zertifizierungsprüfung von It-Pruefung sind umfassend und zielgerichtet, am schnellsten aktualisiert und die vollständigen. Mit It-Pruefung brauchen Sie sich nicht mehr um die Identity-Security-Administrator Zertifizierungsprüfung befürchten. Sie werden alle Identity-Security-Administrator Prüfungen ganz mühelos bestehen.

SailPoint Certified Identity Security Administrator Identity-Security-Administrator Prüfungsfragen mit Lösungen (Q83-Q88):

83. Frage

A new employee's identity is not correctly created and shows in the Identity Exceptions report on the Identity Profile. Is this a correct step towards analyzing and resolving the problem?

Proposed Solution / Statement:

Ensure the account attributes mapped to the identity attributes User Name (uid), Work Email (email), and Last Name are populated correctly.

Does this proposed solution meet the requirement / solve the scenario?

- A. No
- B. Yes

Antwort: B

Begründung:

Yes. Checking these mapped attributes is a primary troubleshooting action for an Identity Exception. Identity Security Cloud defines User Name (uid) , Work Email (email) , and Last Name (lastname) as required identity attributes. Every identity profile must contain mappings for these attributes, and none of the resulting identity values can be null. User Name carries the additional requirement of being unique across identities in the tenant.

When an authoritative-source account is missing one or more required values during aggregation, Identity Security Cloud generates an Identity Exception instead of creating the identity normally. A duplicate User Name can also produce an exception. The administrator should therefore inspect the Identity Exceptions report, identify which required attribute is absent or invalid, and verify the corresponding source-account data and identity-profile mappings.

SailPoint's documented remediation is to correct the problematic source information and then aggregate the source again, either manually or through the next scheduled aggregation. If direct mapping cannot generate a required value, a transform or supported rule can derive it.

Study Guide Reference: Identity and Lifecycle Management - Identity Profiles, Required Identity Attributes, Identity Exceptions and Attribute Mappings.

84. Frage

In order to secure access to the Identity Security Cloud (ISC) Tenant, the administrator wants to restrict access to the tenant to users in certain geographies and networks.

Is this a valid step towards performing this task?

Proposed Solution / Statement:

Admin has to first go to Identity Management, select an Identity Profile and choose the options under 'Block Access From'.

Does this proposed solution meet the requirement / solve the scenario?

- A. No
- B. Yes

Antwort: A

Begründung:

The proposed sequence is incorrect because the administrator should not first apply the Identity Profile's Block Access From settings before defining the underlying network and geography restrictions.

Identity Security Cloud tenant restrictions are configured in two logical stages. First, the organization defines the networks and geographic rules that determine what locations are trusted or untrusted. Network restrictions are based on configured IP address ranges, while geographic restrictions can use trusted or blocked-country definitions. After these global security definitions exist, restrictions are applied to specific user populations through their Identity Profiles.

The Identity Profile does indeed contain Block Access From options such as OffNetwork and Untrusted Geography, so that part of the statement identifies a real configuration location. However, SailPoint explicitly warns that enabling OffNetwork without first defining an applicable network can block all users associated with that identity profile from accessing Identity Security Cloud. Therefore, selecting Block Access From is a required application step, but describing it as the first configuration action makes the proposed solution invalid.

Study Guide Reference: Access Management - Restricting Tenant Access, Network Definitions, Geographic Restrictions and Identity Profile Security.

85. Frage

Does this statement accurately describe the purpose of the Virtual Appliance (VA)?

Proposed Solution / Statement:

The VA allows the tenant to connect to on-prem sources.

Does this proposed solution meet the requirement / solve the scenario?

- A. No
- **B. Yes**

Antwort: B

Begründung:

This statement accurately describes one of the principal purposes of the Virtual Appliance. Identity Security Cloud is a SaaS platform, but many enterprise identity sources are located inside customer-controlled networks and cannot safely accept direct inbound connections from an external cloud service. The VA provides the secure intermediary required for these integrations. SailPoint defines the VA as a Linux-based virtual machine deployed on the customer's infrastructure that connects Identity Security Cloud to organizational sources and applications through supported APIs, connectors, and integrations. The architecture is designed around outbound-only communication from the VA toward SailPoint's cloud environment. SailPoint does not initiate a direct inbound connection to the VA.

This architecture enables account and entitlement aggregation, account correlation support, provisioning, password-related operations, and other connector activities against internal sources while avoiding the need to expose those systems directly through the firewall.

SaaS connectors can eliminate the VA requirement for supported cloud services, but VA-based connectors remain fundamental when direct customer-network connectivity is required.

Study Guide Reference: Virtual Appliances - VA Purpose, On-Premises Source Connectivity, Outbound- Only Architecture and Source Integration.

86. Frage

Is the following statement true about the characteristics of different connector types in Identity Security Cloud (ISC)?

Proposed Solution / Statement:

Active Directory (AD) connectors can handle both authentication and identity lifecycle management, including user provisioning.

Does this proposed solution meet the requirement / solve the scenario?

- A. No
- **B. Yes**

Antwort: B

Begründung:

The statement is valid. The Identity Security Cloud Active Directory connector supports substantial identity- lifecycle functionality, including account aggregation, creation, modification, entitlement management, password-related operations, and provisioning. SailPoint documents Active Directory account provisioning and the use of Identity Security Cloud provisioning policies to create and manage accounts on the directory.

Active Directory can also serve as an authentication source through Pass-Through Authentication (PTA) .

With PTA configured for an identity profile, users can authenticate to Identity Security Cloud using the network password associated with their Active Directory account. Identity Security Cloud passes the authentication operation through to the configured directory source rather than requiring a separate local SailPoint password.

Therefore, the AD integration is not restricted to account aggregation or read-only identity data. It can participate in both authentication and lifecycle administration, including provisioning users and managing access. Appropriate service-account permissions, VA connectivity, and provisioning configuration are required.

Study Guide Reference: Sources - Active Directory Connector, Pass-Through Authentication, Account Aggregation and Provisioning.

87. Frage

A certification campaign was created for manager review. However, the user's certification campaign was assigned to an admin instead of their manager.

Is this a valid reason for why the campaign could have been reassigned?

Proposed Solution / Statement:

User does not have a manager assigned from HR.

Does this proposed solution meet the requirement / solve the scenario?

- A. No
- **B. Yes**

Antwort: B

Begründung:

This can be a valid reason, depending on the manager-review campaign mechanism being used. In a search-based certification campaign where Manager is selected as the reviewer, Identity Security Cloud determines the reviewer from each identity's manager relationship. If an identity does not have a manager defined, SailPoint documents that the certification is reassigned to the creator of the campaign. If the campaign creator is an administrator, the certification therefore appears assigned to that administrator instead of a manager.

The absence of a manager can originate from authoritative HR data, an incomplete manager attribute mapping, failed manager correlation, or otherwise missing manager information on the identity.

A distinction is important: traditional Manager Campaigns require identities to have managers defined and identities without managers are normally excluded. SailPoint recommends using a Search-based campaign with Manager selected as reviewer when identities without managers must still be included.

Given the scenario explicitly states that the certification was reassigned to an admin, missing manager information is therefore a technically valid explanation for the observed fallback assignment.

Study Guide Reference: Supporting Governance - Certifications, Manager Review, Search-Based Campaigns and Identities Without Managers.

88. Frage

.....

Haben Sie It-Prüfung, haben Sie den Schlüssel zum Erfolg, denn Sie können damit die SailPoint Identity-Security-Administrator Zertifizierungsprüfung zügig bestehen. Unsere Berufsgruppe aus gut ausgebildeten und erfahrenen IT-Eliten haben die Entwicklungen der ständig veränderten IT-Branche untersucht und erforscht, dann erstellen Sie die Schulungsunterlagen zur SailPoint Identity-Security-Administrator Zertifizierungsprüfung für It-Prüfung. Ihre Autorität ist zweifellos. Bevor Sie unsere Prüfungsmaterialien kaufen, können Sie die Demo durch unsere Webseite It-Prüfung herunterladen.
