Our products are designed from the customer's perspective, and experts that we employed will update our SAFe-Practitioner Learning Materials according to changing trends to ensure the high quality of the SAFe-Practitioner study material.

## Scrum SAFe Practitioner Exam (6.0) Sample Questions (Q247-Q252):

### NEW QUESTION # 247

Which of the following statements describes the balance between emergent design and intentional architecture when building in quality?

- A. It is required for speed of development and maintainability
- B. It is required for implementation speed and maturity
- C. It is required for backlog speed and designed refinement
- D. **It is required for speed of value delivery and Solution Intent**

**Answer: D**

Explanation:

The balance between emergent design and intentional architecture when building in quality is required for speed of development and maintainability. Emergent design is the practice of defining and evolving the architecture only as necessary to deliver the next increment of functionality, based on the feedback and learning from the previous increments. Intentional architecture is the practice of

defining and implementing some upfront design guidelines and standards that enable the integration and evolution of the solution across multiple teams and domains. Both practices are implemented with enablers, which are technical items that support the development and delivery of features and capabilities. The balance between emergent design and intentional architecture allows the teams and the Agile Release Train (ART) to deliver value faster, with higher quality and lower risk, and to maintain and improve the solution over time<sup>12</sup>. The other options are not accurate descriptions of the balance between emergent design and intentional architecture, as they either do not reflect the benefits of both practices, or use terms that are not relevant to the SAFe context. #### NEW QUESTION # 248

What is one result from Iteration Planning for SAFe Scrum Teams?

- A. Iteration demo
- B. Iteration sequencing
- C. Iteration estimate
- D. Iteration goals

**Answer: D**

Explanation:

One of the results from Iteration Planning for SAFe Scrum Teams is the Iteration goals, which are short, specific, and measurable statements that describe what the Agile team intends to accomplish in an Iteration.

The Iteration goals are derived from the team backlog, the PI objectives, and the team vision. The Iteration goals help to align the team to a common vision of work in the Iteration, and provide clarity, focus, and motivation. The Iteration goals also enable the team to communicate their progress and dependencies to other teams and stakeholders, and to demonstrate value delivery in the system demo. #### NEW QUESTION # 249

What is the role of the System Architect/Engineer?

- A. To manage dependencies
- B. To guide the teams and support the Architectural Runway
- C. To implement continuous improvement methods
- D. To define the design for the system

**Answer: B**

Explanation:

The role of the System Architect/Engineer in SAFe is to guide the teams and support the Architectural Runway, which is the existing code, components, and technical infrastructure needed to implement near-term features without excessive redesign and delay. The System Architect/Engineer defines and communicates the technical and architectural vision for the solutions developed by an Agile Release Train (ART), ensuring that they fit the intended purpose and align with the enterprise and solution architecture. The System Architect

/Engineer also collaborates with various roles, teams, and stakeholders within and outside the ART to ensure that the system architecture supports the evolving business needs and enables fast and reliable implementation. References: System Architect/Engineering - Scaled Agile Framework, Architectural Runway - Scaled Agile Framework

#### NEW QUESTION # 250

Velocity is

- A. the rate (in story points) at which the team delivers
- B. business value delivered (monetary)
- C. average hours of work done by the team
- D. measurement for economic benefit

**Answer: A**

## NEW QUESTION # 251

Which of the following are Scrum events?

- A. Iteration Status Session
- B. Iteration Review
- C. Iteration Inspection
- D. Iteration Planning

**Answer: B,D**

## NEW QUESTION # 252

.....
