

Die neuesten Workday-Prism-Analytics echte Prüfungsfragen, Workday Workday-Prism-Analytics originale fragen

What is Workday Prism Analytics?

Außerdem sind jetzt einige Teile dieser DeutschPrüfung Workday-Prism-Analytics Prüfungsfragen kostenlos erhältlich:
https://drive.google.com/open?id=1d28fRqWiWkPA72vnBlbvbbTRJgWw_HdC

Über die Prüfungsfragen und Antworten zur Workday Workday-Prism-Analytics Zertifizierung hat DeutschPrüfung eine gute Qualität. DeutschPrüfung wird die zuverlässigsten Informationsressourcen sein. Durch die Feedbacks und tiefintensive Analyse sind wir in einer Stelle. Wir müssen darüber entscheiden, welche Anbieter Ihnen die neuesten Übungen von guter Qualität zur Workday Workday-Prism-Analytics Zertifizierungsprüfung bieten und aktualisieren zu können. Unsere Schulungsunterlagen zur Workday Workday-Prism-Analytics Zertifizierungsprüfung werden ständig bearbeitet und modifiziert. Wir haben die umfassendsten Ausbildungserfahrungen. Wenn Sie Zertifikate erhalten wollen, benutzen Sie doch unsere Schulungsunterlagen zur Workday Workday-Prism-Analytics Zertifizierungsprüfung. Schicken DeutschPrüfung doch schnell in Ihren Warenkorb. Unzählige Überraschungen warten schon auf Sie.

Um die Interessen zu schützen, bietet unsere Website die online Prüfungen zur Workday Workday-Prism-Analytics Zertifizierungsprüfung von DeutschPrüfung, die von den erfahrungsreichen IT-Experten nach den Bedürfnissen bearbeitet werden. Sie werden Ihnen nicht nur helfen, die Workday Workday-Prism-Analytics Prüfung zu bestehen und auch eine bessere Zukunft zu haben.

Workday-Prism-Analytics Zertifizierungsantworten & Workday-Prism-Analytics Zertifikatsfragen

Gehen Sie einen entscheidenden Schritt weiter. Mit der Workday Workday-Prism-Analytics Zertifizierung erhalten Sie einen

Nachweis Ihrer besonderen Qualifikationen und eine Anerkennung für Ihr technisches Fachwissen. Workday bietet eine Reihe verschiedener Workday-Prism-Analytics Zertifizierungsprogramme für professionelle Benutzer an. Untersuchungen haben gezeigt, dass zertifizierte Fachleute häufig mehr verdienen als ihre Kollegen ohne Zertifizierung.

Workday Pro Prism Analytics Exam Workday-Prism-Analytics Prüfungsfragen mit Lösungen (Q44-Q49):

44. Frage

Why should you include Workday instance field types in the Workday report that you use to import data into Prism?

- A. Unions are more easily performed with instance field types.
- B. Joins are more easily performed with instance field types.
- C. Performance is improved in the final Prism datasource when published.
- **D. The final Prism datasource can support drilling into Workday objects.**

Antwort: D

Begründung:

Comprehensive and Detailed Explanation From Exact Extract:

When importing data into Workday Prism Analytics from a Workday report, including Workday instance field types in the report is critical for enabling specific functionality in the resulting Prism data source.

According to the official Workday Prism Analytics study path documents, including instance field types allows the final Prism data source to support drilling into Workday objects. Instance field types represent references to Workday business objects (e.g., Worker, Position, or Organization), and including them in the report ensures that the Prism data source retains the ability to navigate to these objects within Workday's reporting and analytics framework. This enables users to perform drill-down actions, such as accessing detailed object data directly from Prism visualizations or reports.

The other options do not accurately reflect the primary benefit of including instance field types:

* B. Performance is improved in the final Prism datasource when published: Instance field types do not directly impact the performance of the published data source; performance is more influenced by data volume and indexing.

* C. Unions are more easily performed with instance field types: Unions depend on schema compatibility, not instance field types, which are specific to Workday object references.

* D. Joins are more easily performed with instance field types: While instance field types can be used in joins, their primary purpose is to enable object navigation, not to simplify join operations.

By including instance field types, the Prism data source gains enhanced interactivity, allowing users to leverage Workday's object model for deeper analysis and navigation.

45. Frage

You are asked to produce a Prism data source, which is going to be used in a matrix report that should display the minimum, maximum, total, average, and the median purchase order amount by location and month. What should you do to achieve the desired result?

- A. Add a Group By stage to your derived dataset.
- B. Publish your detail data and build the summarizations in the advanced report.
- **C. Publish your detail data and build the summarizations in the matrix report.**
- D. Add two Group By stages to your derived dataset.

Antwort: C

Begründung:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, a matrix report in Workday is designed to display summarized data in a grid format, with built-in capabilities to calculate aggregations like minimum, maximum, total, average, and median. According to the official Workday Prism Analytics study path documents, to produce a Prism data source for a matrix report that needs to display the minimum, maximum, total, average, and median purchase order amount by location and month, you should publish your detail data and build the summarizations in the matrix report (option A).

Publishing the detail data (i.e., the raw purchase order data with fields like location, month, and amount) as a Prism data source allows the matrix report to access the granular data. The matrix report can then apply the required aggregations (MIN, MAX, SUM, AVG, MEDIAN) directly, grouping by location and month as specified in the report configuration. This approach leverages Workday's reporting capabilities, reducing the need for additional transformations in Prism and ensuring flexibility for future reporting needs.

The other options are less efficient:

* B. Add a Group By stage to your derived dataset: A Group By stage in the derived dataset can compute some aggregations (e.g., SUM, AVG), but Prism does not natively support calculating the median in a Group By stage, and it would require multiple stages or calculated fields to compute all metrics, making it less practical than using the matrix report.

* C. Publish your detail data and build the summarizations in the advanced report: While an advanced report can perform some summarizations, it is not as well-suited as a matrix report for displaying multiple aggregations (like median) in a grid format by location and month.

* D. Add two Group By stages to your derived dataset: Using two Group By stages is unnecessary and still does not address the limitation of calculating the median in Prism, making this approach overly complex.

Publishing the detail data and letting the matrix report handle the summarizations is the most efficient and effective way to meet the requirements.

46. Frage

You accidentally delete a Prism calculated field that is used in other Prism calculated fields or conditions.

What is a possible outcome?

- A. The system will automatically adjust any dependencies accordingly.
- B. The system will automatically reverse the deletion because the field is referenced elsewhere.
- **C. Errors will result in any stage or calculated field that references the field.**
- D. Any calculated field referencing the deleted field defaults to zero.

Antwort: C

Begründung:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, calculated fields are often interdependent, with one calculated field referencing another in its expression or being used in conditions within a dataset's transformation stages. According to the official Workday Prism Analytics study path documents, if a calculated field is deleted while other calculated fields or conditions depend on it, the system does not automatically handle the dependency. Instead, this deletion will cause errors in any stage or calculated field that references the deleted field. These errors occur because the dependent calculations or conditions can no longer resolve the reference to the deleted field, leading to failures in the dataset's transformation pipeline or when the dataset is processed or published.

The other options are incorrect:

A: The system will automatically reverse the deletion because the field is referenced elsewhere: Prism Analytics does not have an automatic reversal mechanism for deletions; users must manually restore the field if needed.

B: Any calculated field referencing the deleted field defaults to zero: The system does not default to zero; it will instead throw an error due to the unresolved reference.

D: The system will automatically adjust any dependencies accordingly: Prism does not automatically adjust dependencies; the user must manually update the dependent fields or conditions to resolve the issue.

The resulting errors highlight the importance of carefully managing dependencies when deleting calculated fields, ensuring that all references are updated or removed to avoid disruptions in the dataset's transformation logic.

47. Frage

You have a number of Workday reports that use a Prism data source. When are the values of the Prism calculated fields in the Workday reports calculated?

- A. At report run time.
- B. At the calculated field creation time.
- C. At dataset creation time.
- **D. At time of publishing.**

Antwort: D

48. Frage

You want to apply a Filter stage to your derived dataset to show only expense reports submitted in the current month and where the expense report total amount is higher than 2000 USD. What should you do?

- A. Use a simple filter, three conditions, and "If All" operator.
- B. Use a simple filter, three conditions, and "If Any" operator.
- C. Use a simple filter, two conditions, and "If Any" operator.
- **D. Use a simple filter, two conditions, and "If All" operator.**

Antwort: D

Begründung:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, a Filter stage in a derived dataset is used to include only rows that meet specific criteria. The requirement here is to show expense reports that satisfy two conditions: (1) submitted in the current month, and (2) total amount higher than 2000 USD. According to the official Workday Prism Analytics study path documents, this can be achieved by using a simple filter with two conditions and the "If All" operator (option A).

The first condition would check the submission date, using a function like MONTH() to compare with the current month (e.g., MONTH(submission_date) = MONTH(CURRENT_DATE())). The second condition would compare the total amount (e.g., total_amount > 2000). The "If All" operator ensures that both conditions must be true for a row to be included, which aligns with the requirement that both criteria (current month AND amount > 2000 USD) must be met. A simple filter is sufficient because the logic involves straightforward comparisons without nested conditions.

The other options are incorrect:

* B. Use a simple filter, two conditions, and "If Any" operator: The "If Any" operator would include rows where either condition is true (e.g., submitted in the current month OR amount > 2000 USD), which does not meet the requirement for both conditions to be true.

* C. Use a simple filter, three conditions, and "If All" operator: Only two conditions are needed (submission month and amount), so three conditions are unnecessary.

* D. Use a simple filter, three conditions, and "If Any" operator: This combines the issues of option B (wrong operator) and option C (too many conditions).

Using a simple filter with two conditions and the "If All" operator ensures the dataset includes only the expense reports that meet both criteria.
