# NCP-EUC Reliable Dumps Free, NCP-EUC Latest Test Answers
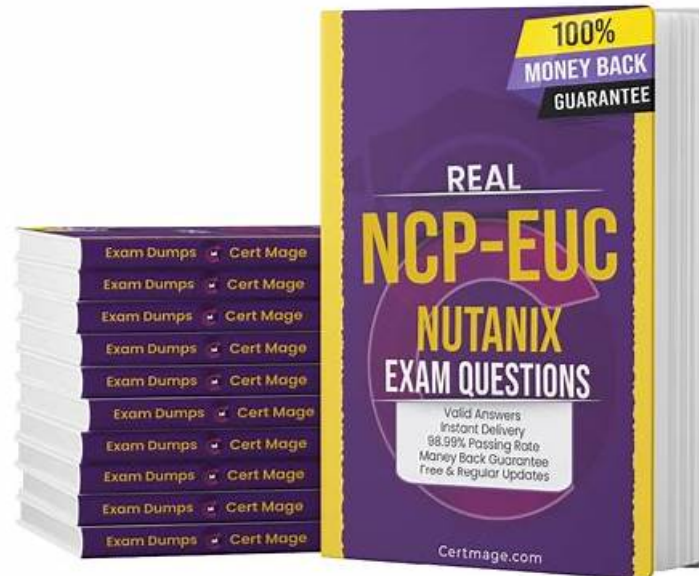

We are willing to provide all people with the demo of our NCP-EUC study tool for free. If you have any doubt about our products that will bring a lot of benefits for you. The trial demo of our NCP-EUC question torrent must be a good choice for you. By the trial demo provided by our company, you will have the opportunity to closely contact with our NCP-EUC Exam Torrent, and it will be possible for you to have a view of our products. More importantly, we provide all people with the trial demo for free before you buy our NCP-EUC exam torrent and it means that you have the chance to download from our web page for free; you do not need to spend any money.

Nutanix NCP-EUC Exam is designed for IT professionals who specialize in end-user computing. Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam certification exam is aimed at validating the skills and knowledge of candidates in designing, implementing, and managing Nutanix-powered end-user computing solutions. Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam certification proves that the candidate is proficient in deploying and managing virtual desktop infrastructure (VDI) and enterprise mobility management (EMM) solutions on Nutanix.

## Avail Useful NCP-EUC Reliable Dumps Free to Pass NCP-EUC on the First Attempt

As job seekers looking for the turning point of their lives, it is widely known that the workers of recruitment is like choosing apples---viewing resumes is liking picking up apples, employers can decide whether candidates are qualified by the NCP-EUC appearances, or in other words, candidates' educational background and relating NCP-EUC professional skills. They develop the NCP-EUC exam guide targeted to real exam. The wide coverage of important knowledge points in our NCP-EUC latest braindumps would be greatly helpful for you to pass the exam.

## Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam

# Sample Questions (Q58-Q63):

**NEW QUESTION # 58**

The administrator is reviewing Prism Central Tasks (Menu\Activity\Tasks) and noticed that there are a lot of tasks named:

ADS: Remove Resource Contention

The administrator would like to identify the virtual desktops in the environment that are using the most resources to determine how to fix the resource contention.

Which action should the administrator take to complete this task?

- A. Review the Storage Runway
- B. Filter the virtual desktops by Constrained: High,
- C. Review Planning scenarios.
- D. Filter the virtual desktops by Metrics: CPU Usage.

**Answer: B**

Explanation:

an action that the administrator should take to identify the virtual desktops in the environment that are using the most resources and causing resource contention is Filter the virtual desktops by Constrained: High.

Constrained is a metric that indicates how often a virtual machine is unable to get its requested CPU resources.

A high value means that the virtual machine is frequently starved for CPU and may experience performance degradation. By filtering the virtual desktops by Constrained: High, the administrator can see which ones are suffering from resource contention and take appropriate actions such as migrating them to less loaded hosts or increasing their CPU allocation.

**NEW QUESTION # 59**

A multisite App Volumes deployment uses a stretched database over multiple Horizon View sites. Non- Attachable volumes will be used to support replication of AppStacks between blocks and pods.

What should the administrator do to be able to replicate AppStacks between the Nutanix clusters?

- A. Leverage an external storage system such as NFS NAS to support the non-attachable
- B. storage container on the primary cluster to at least one host in other Nutanix clusters,
- C. Utilize the native async disaster recovery technology to replicate the AppStacks between the Nutanix clusters.
- D. Replicate the .vmdk files and AppStacks permissions using a script between the Nutanix clusters,

**Answer: C**

Explanation:

regarding replicating AppStacks between Nutanix clusters, it is likely that the correct answer would involve configuring some form of replication or disaster recovery technology on the Nutanix clusters themselves.

**NEW QUESTION # 60**

A multisite App Volumes deployment uses a stretched database over multiple Horizon View sites.

Non-Attachable volumes will be used to support replication of AppStacks between blocks and pods.

What should the administrator do to be able to replicate AppStacks between the Nutanix clusters?

- A. Leverage an external storage system such as NFS NAS to support the non-attachable
- B. storage container on the primary cluster to at least one host in other Nutanix clusters,
- C. Utilize the native async disaster recovery technology to replicate the AppStacks between the Nutanix clusters.
- D. Replicate the .vmdk files and AppStacks permissions using a script between the Nutanix clusters,

**Answer: C**

Explanation:

regarding replicating AppStacks between Nutanix clusters, it is likely that the correct answer would involve configuring some form of replication or disaster recovery technology on the Nutanix clusters themselves.

## NEW QUESTION # 61

An administrator is investigating a complaint about poor performance and slow response times for a virtual desktop environment.
The administrator has obtained the following statistics from the environment:
* vCPU to pCPU ratio is 4:1
* VM Guest OS is Windows 10
* VMs are configured with 4 vCPUs each
* VM Guests are configured with 16GB of RAM
* The SSD cache tier is 85% full, and the capacity tier is 45% full
* Host CPU utilization is < 40%
What is the most likely cause of the poor performance?

- A. VM RAM is over-provisioned.
- B. vCPU to pCPU ratio is too high.
- C. SSD Cache tier is over-committed.
- D. Capacity tier is over-provisioned.

**Answer: C**

Explanation:
The performance statistics indicate that the SSD Cache tier is 85% full, which is the primary bottleneck. In a Nutanix cluster, the SSD tier serves as the high-performance "Hot Tier" (Extent Store and Oplog) for active data. When the SSD tier utilization exceeds recommended thresholds (typically above 75-80%), the system must aggressively destage data to the slower HDD Capacity tier to free up space for incoming writes.
This destaging process and the lack of available SSD space for the active working set (WS) force read and write operations to be served from the slower Capacity tier (HDD), resulting in significantly higher latency and "sluggish" desktop performance. The vCPU ratio (4:1) and Host CPU (< 40%) are well within healthy limits, ruling out CPU contention.

## NEW QUESTION # 62

A user has been migrated from a legacy desktop environment to the company's new Citrix VDI solution.
Performance on the new VDI architecture is good, but the user experiences long login and logoff times for every session.
What is the primary cause of this issue?

- A. There are not enough GPUs available in the cluster.
- B. The user has a legacy roaming profile configured.
- C. The home folder has too much archived data.
- D. The cluster needs additional network connectivity.

**Answer: B**

Explanation:
Comprehensive and Detailed Explanation From Exact Extract of Nutanix End User Computing documents:
According to Citrix on Nutanix Best Practices for Profile Management:
* Legacy Roaming Profiles: A "Legacy Roaming Profile" (Windows Roaming User Profiles) functions by downloading the entire profile (files, folders, AppData, etc.) from the network share to the local VM at logon, and uploading changes back at logoff.
* Impact on Performance: If a user has a large existing profile (common in legacy migrations), this copy process creates massive network and disk I/O activity during the logon/logoff phase, resulting in extended wait times (the "Applying User Settings" or "Waiting for User Profile Service" screens).
* Contrast with Modern Solutions: Modern VDI solutions use Profile Containers (like FSLogix or Citrix Profile Management containers) which mount the profile as a virtual disk (VHDX) almost instantly, rather than copying files.
* Why not Home Folder (C)? A home folder is typically a mapped network drive. It does not copy data to the desktop at logon; it simply maps a pointer. Therefore, having "too much data" in a mapped drive does not slow down the logon process itself.

## NEW QUESTION # 63

......

The Nutanix NCP-EUC pdf format of the Pass4training product is easy-to-use. It contains actual Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam (NCP-EUC) exam questions. You can easily download and use NCP-EUC pdf on

laptops, tablets, and smartphones. Pass4training regularly updates Nutanix NCP-EUC Exam Questions' pdf version so that you always have the latest material. Furthermore, the Nutanix NCP-EUC pdf can be printed enabling paper study.
