You need comprehensive exam questions to prepare well for the exam. In this article, we will introduce you to ITdumpsfree Fortinet EMEA-Advanced-Support Exam Questions that offer relevant and reliable exam materials for your Fortinet EMEA Advanced Support Exam (EMEA-Advanced-Support) exam preparation.

## Fortinet EMEA Advanced Support Exam Sample Questions (Q50-Q55):

### NEW QUESTION # 50

Which protocol does FortiGate use for secure management access by default?

- A. SNMP
- B. HTTP
- C. SSH
- D. Telnet

**Answer: C**

Explanation:

FortiGate uses SSH (Secure Shell) by default for secure management access, providing encrypted command- line access. Telnet (A) and HTTP (C) are insecure, and SNMP (D) is for monitoring, not management. Exact extract: "FortiGate enables SSH by default for secure management access, providing encrypted CLI access to administrators."

### NEW QUESTION # 51

What does the FortiGate 'set nat enable' command do in a firewall policy?

- A. Enables NAT for incoming traffic only
- B. Forces NAT to use a specific IP pool
- C. Disables NAT for the policy
- D. Enables NAT for outgoing traffic

**Answer: D**

Explanation:

The 'set nat enable' command in a FortiGate firewall policy enables Source NAT (SNAT) for outgoing traffic, typically rewriting the source IP to the FortiGate's interface IP or an IP pool. It does not disable NAT (B), force a specific pool (C), or limit to incoming traffic (D). Exact extract: "The 'set nat enable' command in a firewall policy enables Source NAT, rewriting the source IP address of outgoing traffic to the egress interface IP or a configured NAT pool."

### NEW QUESTION # 52

Which FortiGate feature mitigates DDoS attacks by limiting the rate of incoming connections?

- A. IPS Signature
- B. Application Control
- C. Web Filtering
- D. DoS Policy

**Answer: D**

Explanation:

FortiGate's DoS (Denial of Service) Policy limits the rate of incoming connections or packets to mitigate DDoS attacks, such as SYN floods, by setting thresholds for specific traffic types. IPS Signatures (B) detect specific attack patterns, Application Control (C) manages app usage, and Web Filtering (D) blocks URLs, none of which focus on rate limiting. Exact extract: "DoS policies protect against DDoS attacks by limiting the rate of incoming connections or packets, such as SYN floods, based on configured thresholds."

### NEW QUESTION # 53

What is the role of the FortiGate 'set srcintf' command in a firewall policy?

- A. Defines the destination interface for traffic
- B. Specifies the source interface for traffic matching
- C. Sets the source IP address range
- D. Configures the source NAT interface

**Answer: B**

Explanation:

The 'set srcintf' command in a FortiGate firewall policy specifies the source interface from which traffic originates, helping define the policy's scope. It does not set the destination interface (B), source IP range (C), or NAT interface (D). Exact extract: "The 'set srcintf' command in a firewall policy specifies the source interface for incoming traffic, allowing FortiGate to match packets based on their entry interface."

#### **NEW QUESTION # 54**

Which FortiGate feature allows inspection of encrypted SSL/TLS traffic?

- A. Deep Packet Inspection
- B. Application Control
- **C. SSL Inspection**
- D. Web Filtering

**Answer: C**

Explanation:

FortiGate's SSL Inspection feature decrypts and inspects SSL/TLS traffic to detect threats or enforce policies, using techniques like full SSL inspection or certificate inspection. Deep Packet Inspection (A) is a broader term, Application Control (C) identifies apps, and Web Filtering (D) blocks URLs, not specific to SSL. Exact extract: "SSL Inspection allows FortiGate to decrypt and inspect SSL/TLS traffic to detect hidden threats or enforce security policies, supporting full or certificate-based inspection."

#### **NEW QUESTION # 55**
