Google Cloud Certified - Professional Google Workspace Administrator Sample Questions (Q67-Q72):

NEW QUESTION # 67

An employee has been leaking confidential salary information to an external party. You must use Vault to preserve the messages for an investigation. What should you do?

- A. Use the search and export features to find all the messages sent externally
- B. Use the security investigation tool to find the messages Create a hold to preserve the messages
- C. Create a custom retention policy Use the audit feature to view captured email logs
- **D. Create a matter and add a hold on the employee's email**

Answer: D

Explanation:

Access Google Vault: Go to Google Vault from the Google Admin console.

Create a Matter: Click on "Matters" and create a new matter to hold the case details and any relevant information.

Add a Hold: Within the matter, create a hold specifically on the employee's email account. This ensures that all emails sent and received by the employee are preserved.

Configure the Hold: Specify the criteria for the hold, such as the employee's email address, and set the scope to include all messages.

Save the Hold: Once configured, save the hold. This will preserve all relevant messages for the investigation.

NEW QUESTION # 69

A user does not follow their sign-in pattern and signs in from an unusual location. As an admin, what should you do in response to this alert for this user during this investigation?

- A. Investigate the account for unauthorized activity in the Login and Security Audit Log
- B. Enhance your security alerts for tracking sign-in patterns
- C. First, suspend the account and then investigate
- D. Add Two Factor Authentication to the Domain

Answer: A

NEW QUESTION # 70

You are in charge of automating and configuring Google Cloud Directory Sync for your organization. Within the config manager, how can you proactively prevent applying widespread deletions within your Workspace environment if your company's LDAP undergoes a substantial modification?

- A. Configure the tool to delete users only when run from the config manager.
- B. Specify the minimum and maximum number of objects to synchronize in each configuration item.
- C. Manually run Google Cloud Directory Sync only after performing a simulated sync.
- D. Configure limits for the maximum number of deletions on each synchronization.

Answer: D

Explanation:

Preventing Widespread Deletions:

Configuring deletion limits helps prevent accidental or mass deletions if there's a substantial change in the LDAP directory.

Steps to Configure Deletion Limits:

Open the Google Cloud Directory Sync (GCDS) Configuration Manager.

Go to "General Settings" and locate the "Deletion Limits" section.

Set the maximum number of deletions allowed per sync. This will pause the synchronization if the number of deletions exceeds the specified limit, allowing you to review and approve the changes manually.

Save the configuration and test the synchronization process to ensure the limits are properly applied.
