71301T Questions Answers & 71301T Materials

The third and last format is the Avaya 71301T desktop practice exam software form that can be used without an active internet connection. This software works offline on the Windows operating system. The practice exams benefit your preparation because you can attempt them multiple times to improve yourself for the Avaya 71301T Certification test. Our Avaya Aura Communication Applications Implement (71301T) exam dumps are customizable, so you can set the time and questions according to your needs.

Avaya Aura Communication Applications Implement Sample Questions (Q76-Q81):

NEW QUESTION # 76

Which configuration mechanism allows an administered group of snap-ins to be invoked in a specified order?

- A. Vector Administration

- **B. Service Profile Administration**
- C. Implicit User Profile Administration
- D. Cluster Administration

Answer: B

Explanation:

In the Avaya Breeze environment, Service Profile Administration is the mechanism used to define and sequence snap-ins for specific users or endpoints.

Ordering: When you create a Service Profile, you can group multiple snap-ins and define the execution order in which they are invoked. This ensures that features (such as security filters, call recording, or Presence services) are processed in the correct sequence as a request moves through the platform.

Application: Once a Service Profile is created and ordered, it is assigned to specific users or devices. When a request from that user hits the Breeze server, the platform consults the associated Service Profile to determine the invocation sequence of the snap-ins.

NEW QUESTION # 77

When installing a new Avaya Session Border Controller for Enterprise (ASBCE) component / device using the EMS GUI, you click on the Install link on the EMS Device Management page.

After briefly displaying the Provisioned status, which final status should the ASBCE component / device display?

- A. Running
- B. Active
- **C. Commissioned**
- D. Up

Answer: C

Explanation:

The installation and management workflow in the Avaya Session Border Controller for Enterprise (ASBCE) follows a specific state-transition model within the Element Management System (EMS):

Provisioned: This indicates that the initial configuration data has been pushed to the device.

Commissioned: This is the successful end-state of the installation/registration process between the EMS and the SBC node. Once the device reaches this state, it signifies that the trust relationship is established, the management channel is fully operational, and the device is ready to accept production configuration policies (such as SIP Trunking or Remote Worker settings).

NEW QUESTION # 78

When the Branch Session Manager (BSM) sends OPTIONS requests to the Survivable Communication Manager (CM) when the Main Communication Manager and the Core Session Managers are in a working condition and reachable, what would be the SIP response?

- **A. 503 Service Unavailable (No Media Resources)**
- B. 503 Service Unavailable (LSP is inactive)
- C. 200 OK
- D. 488 Not Acceptable Here

Answer: A

Explanation:

When the Main Communication Manager and Core Session Managers are reachable, the Branch Session Manager sends OPTIONS requests to the Survivable CM (acting as LSP) to check availability. The Survivable CM responds with "503 Service Unavailable (LSP is inactive)" to indicate it's in standby mode and not handling core traffic.

NEW QUESTION # 79

In the Avaya Session Border Controller for Enterprise (SBCE), before a traffic carrying Network Interface (A1 or B1) can be pinged, to which state do you have to toggle the status on Device Specific Settings > Network Management / Interfaces?

- **A. Enabled**
- B. Active

- C. Accept Service
- D. In-Service

Answer: A

Explanation:

Commission the SBC--SBC Configuration

1. The A1 and B1 interfaces display on the Network Configuration tab:
 2. Click on the Interface Configuration tab:
 3. Click the Toggle link for both the A1 and the B1 interfaces.
- The Administrative Status for both A1 and B1 changes to Enabled:

NEW QUESTION # 80

Which access control method is used by the Avaya Aura Application Enablement Services (AES) server for administrators?

- **A. Role-Based Access Control**
- B. Challenge-Response shared-key method only
- C. Single Administrator simple password login
- D. System Manager AES Management Menu

Answer: A

Explanation:

Role Based Access Control (RBAC)

Access to AE Services Management Console Web pages can be restricted by user authorization level.

The operations that users are allowed to perform such as read, edit and delete can also be restricted.
