## **Free PDF Quiz Snowflake - Perfect COF-C02 - Valid SnowPro Core Certification Exam Test Sims**

When you first contact our software, different people will have different problems. Maybe you are not comfortable with our COF-C02 exam question and want to know more about our products and operations. As long as you have questions, you can send e-mail to us, we have online staff responsible for ensuring 24-hour service to help you solve all the problems about our COF-C02 test prep. After you purchase our COF-C02 quiz guide, we will still provide you with considerate services. Maybe you will ask whether we will charge additional service fees. We assure you that we are focused on providing you with guidance about our COF-C02 Exam Question, but all services are free. If you encounter installation problems, we will have professionals to provide you with remote assistance. Of course, we will humbly accept your opinions on our COF-C02 quiz guide. If you have good suggestions to make better use of our COF-C02 test prep, we will accept your proposal and make improvements. Each of your progress is our driving force. We sincerely serve for you any time.

## Snowflake SnowPro Core Certification Exam Sample Questions (Q782-Q787):

### NEW QUESTION # 782

Which Snowflake table stores file-level metadata about unstructured data files in a stage, including size, last-modified timestamp, and Snowflake file URL?

- A. External table
- B. **Directory table**
- C. Iceberg table
- D. Dynamic table

**Answer: B**

Explanation:

A Directory Table stores metadata about unstructured data files in a stage, such as size, last-modified timestamp, and file URL. This metadata helps query or track files without ingesting them into a table.

[Snowflake Docs: Directory Tables for Unstructured Data](#)

### NEW QUESTION # 783

What are the three layers that make up Snowflake's architecture? Choose 3 answer

- A. Tri-Secret Secure
- B. **Compute**
- C. Cloud Services
- D. Storage

**Answer: B,C,D**

### NEW QUESTION # 784

A user created a new worksheet within the Snowsight UI and wants to share this with teammates. How can this worksheet be shared?

- A. Create a zero-copy clone of the worksheet and grant permissions to teammates
- B. **Share the worksheet with teammates within Snowsight**
- C. Create a private Data Exchange so that any teammate can use the worksheet
- D. Create a database and grant all permissions to teammates

**Answer: B**

Explanation:

Worksheets in Snowsight can be shared directly with other Snowflake users within the same account. This feature allows for collaboration and sharing of SQL queries or Python code, as well as other data manipulation tasks.

### NEW QUESTION # 785

When creating a user it is advisable to: Choose 2 answers

- A. **Set a default role for the user**
- B. Set the number of minutes to unlock to 15 minutes
- C. Set the user to be initially disabled
- D. Set the user's access to expire within a specified timeframe
- E. **Force an immediate password change**

**Answer: A,E**

## NEW QUESTION # 786

How does the Access\_History view enhance overall data governance pertaining to read and write operations? (Select TWO).

- A. Provides a unified picture of what data was accessed and when it was accessed
- B. Determines whether a given row in a table can be accessed by the user by filtering the data based on a given policy
- C. Shows how the accessed data was moved from the source to the target objects
- D. Identifies columns with personal information and tags them so masking policies can be applied to protect sensitive data
- E. Protects sensitive data from unauthorized access while allowing authorized users to access it at query runtime

**Answer: A,B**

Explanation:

The ACCESS\_HISTORY view in Snowflake is a powerful tool for enhancing data governance, especially concerning monitoring and auditing data access patterns for both read and write operations. The key ways in which ACCESS\_HISTORY enhances overall data governance are:

\* B. Provides a unified picture of what data was accessed and when it was accessed: This view logs details about query executions, including the objects (tables, views) accessed and the timestamps of these accesses. It's instrumental in auditing and compliance scenarios, where understanding the access patterns to sensitive data is critical.

\* E. Determines whether a given row in a table can be accessed by the user by filtering the data based on a given policy: While this option is a bit of a misinterpretation of what ACCESS\_HISTORY directly offers, it indirectly supports data governance by providing the information necessary to analyze access patterns. This analysis can then inform policy decisions, such as implementing Row-Level Security (RLS) to restrict access to specific rows based on user roles or attributes.

ACCESS\_HISTORY does not automatically apply data masking or tag columns with personal information.

However, the insights derived from analyzing ACCESS\_HISTORY can be used to identify sensitive data and inform the application of masking policies or other security measures.
