Latest Cisco 350-701 Braindumps Free & 350-701 Reliable Exam Blueprint

Free update for 365 days is available for 350-701 study guide, so that you can have a better understanding of what you are going to buy. Through free demo, you can also know what the complete version is like. In addition, with experienced experts to compile the 350-701 Exam Dumps, quality can be guaranteed. Therefore, if you choose us, you can use them at ease. We have online and offline chat service stuff, who are quite familiar with 350-701 study guide, if you have any questions, you can consult us.

Cisco Implementing and Operating Cisco Security Core Technologies Sample Questions (Q560-Q565):

NEW QUESTION # 560
Which two features are used to configure Cisco ESA with a multilayer approach to fight viruses and malware?
(Choose two.)

- A. outbreak filters
- B. Sophos engine
- C. DLP
- D. white list
- E. RAT

Answer: A,B

NEW QUESTION # 561
What is a difference between FlexVPN and DMVPN?

- A. DMVPN uses IKEvI or IKEv2. FlexVPN only uses IKEvI
- B. FlexVPN uses IKEv2. DMVPN uses IKEvI or IKEv2.
- C. DMVPN uses only IKEvI FlexVPN uses only IKEv2.
- D. FlexVPN uses IKEvI or IKEv2. DMVPN uses only IKEv2

Answer: B

NEW QUESTION # 562
Refer to the exhibit.

A network engineer is testing NTP authentication and realizes that any device synchronizes time with this router and that NTP authentication is not enforced What is the cause of this issue?

- A. NTP authentication is not enabled.
- B. The router was not rebooted after the NTP configuration updated.
- C. The hashing algorithm that was used was MD5. which is unsupported.
- D. The key was configured in plain text.

Answer: A

Explanation:
The cause of this issue is that NTP authentication is not enabled on the router. The commands shown in the exhibit only define the authentication key and mark it as trusted, but they do not enable NTP authentication globally or on a per-peer basis. To enable NTP authentication globally, the command ntp authenticate must be used. To enable NTP authentication on a per-peer basis, the command ntp server ip-address key key-id or ntp peer ip-address key key-id must be used, where key-id is the same as the one defined by the ntp authentication-key command. Without enabling NTP authentication, any device can synchronize time with this router, regardless of whether it has the same authentication key or not.
The other options are incorrect because:
* The key was configured in plain text, but this is not the cause of the issue. Although it is recommended to use the ntp authentication-key key-id md5 key [encrypted] command to encrypt the key, using plain text does not prevent NTP authentication from working, as long as the same key is configured on both the router and the peer.
* The hashing algorithm that was used was MD5, which is supported by NTP. MD5 is the default algorithm for NTP authentication and it can be used with any key length from 1 to 16 characters. Other algorithms, such as SHA and SHA1, are also supported by NTP if the OpenSSL library is installed, but they are not required for NTP authentication to work.
* The router was not rebooted after the NTP configuration updated, but this is not necessary for NTP authentication to take effect. NTP authentication is applied immediately after the configuration commands are entered, and no reboot is required.

NEW QUESTION # 563
Which component of Cisco umbrella architecture increases reliability of the service?

- A. AMP Threat grid
- B. Cisco Talos
- C. Anycast IP
- D. BGP route reflector

Answer: C

Explanation:
Anycast IP is a component of Cisco umbrella architecture that increases reliability of the service by allowing the same IP address to exist on multiple servers around the world. This way, the user's request is automatically routed to the nearest and fastest data center, and failover is seamless in case of an outage. Anycast IP also reduces latency and improves performance by using BGP to select the shortest path to the destination12.
