## Mule-Arch-202 Authorized Test Dumps & Mule-Arch-202 Valid Test Forum

Obtaining a Mule-Arch-202 certificate can prove your ability so that you can enhance your market value. When you want to correct the answer after you finish learning, the correct answer for our Mule-Arch-202 test prep is below each question, and you can correct it based on the answer. In addition, we design small buttons, which can also show or hide the Mule-Arch-202 Exam Torrent, and you can flexibly and freely choose these two modes according to your habit. In short, you will find the convenience and practicality of our Mule-Arch-202 quiz guide in the process of learning. We will also continue to innovate and improve functions to provide you with better services.

## Salesforce Certified MuleSoft Platform Integration Architect Sample Questions (Q159-Q164):

### NEW QUESTION # 159

How can developers ensure that streaming operations do not impact the stability of Mule applications?

- A. By limiting the number of concurrent streams.
- B. By using flow control mechanisms like throttling.

- C. By employing aggressive data pruning strategies.
- D. By testing with maximum possible load scenarios.

**Answer: B**

#### **NEW QUESTION # 160**

A company that is a leading provider of courses and training delivers courses using third party trainers. The trainer for the company has to be verified from 10 different training accreditation verification agencies before providing training for the company. Each training accreditation agency has its own response time, which could take days to confirm a trainer.

The company decided to automate the trainer accreditation verification process by integrating to the agencies' web services.

What is the recommended approach to automate this process?

- A. Use salesforce external service to make the call out, Salesforce external service should check the verification agencies until the result is verified, then update the trainer status to "verified".
- B. Use middleware to handle the call out to the 10 different verification services, the middleware will handle the business logic of consolidating the verification result from 10 services, then make a call-in to salesforce and update the verification status to "verified".
- C. Make an apex callout using @future annotation to make the call out to all different agencies. The response should update the trainer status to "verified".
- D. Create a trigger on the trainer record to make a Callout to each verification agencies, write business logic to consolidate the verification then update the trainer status to verified".

**Answer: B**

#### **NEW QUESTION # 161**

Which feature of Anypoint Platform allows for automating interactions during CI/CD processes?

- A. Static IP assignment for applications.
- B. Anypoint Studio's in-built debugging tools.
- C. CloudHub API for programmatic access to the platform
- D. Manual deployment capabilities.

**Answer: C**

#### **NEW QUESTION # 162**

Refer to the exhibit.

A shopping cart checkout process consists of a web store back end that sends a sequence of HTTPS POST requests to an Experience API, which in turn invokes a Process API using HTTPS. The web store back end executes in a Java EE application server. All API implementations are Mule applications executing in a customer-hosted Mule runtime. End-to-end correlation of all HTTP requests and responses belonging to each checkout instance is required. This is to be done through a common correlation ID so that all log entries written by the web store back end, Experience API implementation, and Process API implementation include the same correlation ID for all requests and responses belonging to the same checkout instance. What is the most efficient way (using the least amount of custom coding or configuration) for the web store back end and the implementations of the Experience API and Process API to participate in end-to-end correlation of the API invocations for each checkout instance?

- A. The Experience API implementation generates a correlation ID for each incoming HTTP request and passes it to the web store back end in the HTTP response, which includes it in all subsequent API invocations to the Experience API.
- B. The web store back end sends a correlation ID value in the HTTP request body in the way required by the Experience API.
- C. The web store back end, being a Java EE application, automatically uses the thread-local correlation ID generated by the Java EE application server and automatically transmits that to the Experience API using standard HTTP headers.
- D. The web store back end generates a new correlation ID value at the start of checkout and sets it on the X-Correlation-ID HTTP request header in each API invocation belonging to that checkout.

**Answer: D**

## NEW QUESTION # 163

What should be considered when designing CI/CD pipelines for Mule applications to ensure smooth transitions between development, test, and production environments?

- A. Avoid using any automated tools to minimize complexity.
- **B. Ensure that the pipeline includes stages for build, test, and deployment automation.**
- C. Use the same configuration settings across all environments.
- D. Restrict pipeline visibility to developers only.

**Answer: B**

## NEW QUESTION # 164

.....

In this information-dominated society, boosting plenty stocks of knowledge and being competent in some certain area can establish yourself in society and help you get a high social status. Passing Mule-Arch-202 certification can help you realize these goals and find a good job with high income. If you buy our Mule-Arch-202 practice test you can pass the exam successfully and easily. The purchase procedures are safe and we protect our client's privacy. We provide 24-hours online customer service and free update within one year. If you fail in the exam, we will refund you immediately. All in all, there are many advantages of our Mule-Arch-202 Training Materials.
