Reliable RUCKUS RCNI Dumps Questions, RCNI Quiz

We can provide absolutely high quality guarantee for our RCNI practice materials, for all of our RCNI learning materials are finalized after being approved by industry experts. Without doubt, you will get what you expect to achieve, no matter your satisfied scores or according RCNIcertification file. As long as you choose our RCNI exam questions, you will get the most awarded.

RUCKUS Certified Networking Implementer Sample Questions (Q38-Q43):

NEW QUESTION # 38
At which prompt can the ping command be executed?

- A. ICX7150-C12 Router(config-if-mgmt-1)#
- B. ICX7150-C12 Router(config-if-e1000-1/1/1)#
- C. ICX7150-C12 Router#
- D. ICX7150-C12 Router(config)#

Answer: C

Explanation:

* Understanding CLI Levels:
* The ping command is used to test connectivity to other devices by sending ICMP echo requests.
* It can only be executed from the privileged EXEC mode, which is indicated by the Router# prompt.
* Why Other Prompts Don't Work:
* A. Router(config-if-mgmt-1)#: This is the interface configuration mode for the management port and does not allow execution of diagnostic commands like ping.
* B. Router(config)#: This is the global configuration mode, which is used to configure the switch but does not support diagnostic commands.
* D. Router(config-if-e1000-1/1/1)#: This is the interface configuration mode for Ethernet 1/1/1, which also does not allow execution of ping.

NEW QUESTION # 39

The root bridge is connected to another switch over two independent 10Gbe links. Which link will remain in a forwarding state on both sides?

- A. the link with the lowest port number on the non-root switch
- B. the link with the highest port number on the non-root switch
- C. the link with the lowest port number on the root switch
- D. the link with the highest port number on the root switch

Answer: C

NEW QUESTION # 40

Which command could be used to find the system name of an attached device?

- A. show inline power
- B. show chassis
- C. ping
- D. show lldp neighbors

Answer: B

NEW QUESTION # 41

What is one advantage of the supportsave command versus the show tech-support command?

- A. Allows the transfer of collected data to TFTP.
- B. Uploads directly to RUCKUS support.
- C. Generates automatically after a system crash.
- D. Uses fewer CPU cycles during execution.

Answer: A

Explanation:
* Comparison Between supportsave and show tech-support:
* show tech-support: Generates diagnostic information and displays it on the CLI. It does not directly save or transfer the output.
* supportsave: Gathers similar diagnostic data but also allows the data to be transferred to a remote server, such as via TFTP, for easier analysis.
* Why Other Options Don't Apply:
* A. Uses fewer CPU cycles during execution: Both commands are similar in terms of resource usage.
* C. Uploads directly to RUCKUS support: Data transfer to RUCKUS support requires manual intervention.
* D. Generates automatically after a system crash: Neither command generates data automatically; both require user execution.

NEW QUESTION # 42
Which command can be used to identify Cyclic Redundancy Check (CRC) errors on port Ethernet 1/1/1?

- A. show mac-address ethernet 1/1/1
- B. show interfaces brief ethernet 1/1/1
- C. show port security ethernet 1/1/1
- D. show statistics ethernet 1/1/1

Answer: D

Explanation:
* Locating CRC Errors:
* The show statistics ethernet [port] command provides detailed port statistics, including packet counts, errors, and specifically Cyclic Redundancy Check (CRC) errors.
* Why Other Commands Don't Work:
* B. show interfaces brief ethernet 1/1/1: This provides a summary of interface status but does not include detailed error information like CRC errors.
* C. show mac-address ethernet 1/1/1: This displays MAC address table entries for the specified port, unrelated to error statistics.
* D. show port security ethernet 1/1/1: This shows port security configurations and violations, not errors like CRC.
