## Huawei HCIP-Access V2.5 Sample Questions (Q13-Q18):

### NEW QUESTION # 13

Which of the following statements about multicast is incorrect?

- A. The report sent by a user is captured by the board logic and sent to the CPU of the board.
- B. You can add IGMP users to a BTV. By default, a multicast user can watch 8 programs.
- C. In the case of IGMP match mode disable, you need to configure a multicast channel.
- D. General parameters for multicast protocols (IGMP proxy and IGMP snooping) are configured globally at Layer 2 and apply to all multicast VLANs.

**Answer: C**

### NEW QUESTION # 14

The auto-discovery methods provided by sight are by network segment mode, ARP mode and routing mode. At the same time, you can create a network segment or IP address of a device that does not need to be

connected as an exclusion list. Automatically skips the network segment or IP address configured in the exclusion list during self-discovery of devices.

- A. False
- B. True

**Answer: B**

#### **NEW QUESTION # 15**

(Single-choice) An IPTV user reports the TV cannot be watched. After enabling OLT debug for multicast /IGMP, the printed information (authorization result) indicates the conclusion below. This can be judged by the results of the query:

- A. The user does not have permission to watch the show
- B. The PON port multicast bandwidth is insufficient
- C. User bandwidth validation failed
- D. IGMP Snooping failure

**Answer: A**

Explanation:

In Huawei IPTV access, when the OLT's IGMP audit/authorization debug shows a negative program-rights /authorization result, it indicates that the user lacks permission for the requested multicast program group.

This is distinct from port multicast bandwidth alarms (insufficient multicast bandwidth), IGMP snooping state malfunctions, or

subscriber traffic shaping/bandwidth checks. Authorization failures map directly to "no permission to watch the program."

#### **NEW QUESTION # 16**

(Single)When deploying home and guest services in a PON system, which of the following services has the highest priority?

- A. VOIP
- B. INTERNET
- C. IPTV
- D. GAME

**Answer: A**

#### **NEW QUESTION # 17**

(Radio) The device periodically sends and receives LACP packets to avoid information loss. If no LACPDU is received within ( ) LACP interaction cycles, the system considers the member port Down.

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: A**

Explanation:

In IEEE 802.1AX/802.3ad LACP operation, timeout detection relies on a multiplier of three consecutive LACP intervals. In short-timeout mode, the default period is ~1 s; if 3 intervals pass without receiving LACPDUs, the peer is considered expired and the member is removed (treated as Down for aggregation).

Huawei implements this standard behavior for port-member validity in an Eth-Trunk.
