## ACD201 Latest Exam Testking - Reliable ACD201 Exam Pattern

A good job can create the discovery of more spacious space for us, in the process of looking for a job, we will find that, get the test ACD201 certification, acquire the qualification of as much as possible to our employment effect is significant. Your life can be changed by our ACD201 Exam Questions. Numerous grateful feedbacks from our loyal customers proved that we are the most popular vendor in this field to offer our ACD201 preparation questions. You can totally rely on us.

## Appian ACD201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Application Design and Development: This section of the exam measures the skills of Appian Developers and covers translating business requirements into user stories, building end-to-end applications, managing object security, applying design best practices, and ensuring user-centric experiences through proper UX design.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Advanced Appian Concepts: This section of the exam measures the skills of Solution Architects and covers creating and configuring authentication methods, setting up integration objects, designing APIs, evaluating smart services and plug-ins, and applying SSO mechanisms with SAML and LDAP.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Data Management: This section of the exam measures the skills of Solution Architects and covers designing and documenting data models, recommending record types for optimization and security, working with relational data, and implementing complex models with supporting objects.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Performance and Scalability: This section of the exam measures the skills of Appian Developers and covers designing performant components, building memory-efficient models, conducting database load and automated testing, analyzing server memory and logs for risks, and resolving performance concerns for end users.</li> </ul>

## Appian Senior Developer Sample Questions (Q76-Q81):

### NEW QUESTION # 76

You're redesigning user interfaces to achieve more efficient space usage.

Which layout component is the best choice for displaying an interface with a vertical meaningful order of components?

- A. a!sideBySideLayout()
- B. a!cardLayout()
- C. a!columnsLayout()

**Answer: C**

Explanation:

a!columnsLayout() is best for organizing and displaying components in a vertical order with efficient space usage, as it supports arranging items in structured, responsive columns.

### NEW QUESTION # 77

You're the administrator of your insurance company's case management system. You need to limit insurance agents to only those clients to which they have been assigned.

Which two statements must be true for one way to configure Record-Level security for the Customer record?

(Choose two.)

- A. A condition should be added to the record-level security rule to specify which cases specifically named agents can access.
- B. A new record-level security rule should be created using the Users found in fields option to specify that if a user is found in the "assignedAgent" field (which is a type User), then they can see their cases.
- C. Data sync should be enabled.
- D. Record-level security means agents must have permission to view the record type and permission to edit the records.

**Answer: A,B**

Explanation:

Creating a record-level security rule using the "Users found in fields" option ensures agents only see records assigned to them through the "assignedAgent" field.

Adding a condition to the rule further refines which records (cases) each agent can access, implementing precise record-level security.

## NEW QUESTION # 78

You're reviewing the data store performance logs. You notice several items were logged in the generated slow query log file: `perf_monitor_rdbms_slow.csv`.

What is the default threshold value for a slow query to be included in this log file?

- A. 3 sec
- B. 7 sec
- C. 5 sec

**Answer: A**

Explanation:

The default threshold value for a slow query to be included in the `perf_monitor_rdbms_slow.csv` log file is 3 seconds.

## NEW QUESTION # 79

You're designing a custom component rule!pagingComponent() to page through a list of items. The component must display the current page numbers being shown, as well as the total number of items. Users should be able to click arrows to increase or decrease the pagination.

Review the following:

□ Which two patterns should be used when calling the component in this scenario? (Choose two.)

- A. A local variable `local!pagingInfo` inside `rule!pagingComponent()` with an initial value. When the arrows are clicked, this updates the value of the local variable.
- B. A local variable `local!totalCount` calculated using `count(local!query)`, which is passed into `rule!pagingComponent()` via a rule input. The data type of `local!query` is a list of record or Custom Data Type (CDT).
- C. A rule input `ri!pagingInfo` on `rule!pagingComponent()` with a local variable of the same name in the main interface with an initial value. When the arrows are clicked, this updates the value of the local variable in the main interface.
- D. Passing into the rule input `totalCount` of `rule!pagingComponent()` the value: `local!query.totalCount` where `local!query` is returning a `dataSubset` and `returnTotalCount = "True"`.

**Answer: C,D**

Explanation:

Passing `local!query.totalCount` (from a `dataSubset` with `returnTotalCount: true`) into a rule input allows `rule!pagingComponent()` to accurately display total items for pagination.

Managing paging state (such as `ri!pagingInfo`) as a local variable in the main interface and updating it when arrows are clicked ensures that pagination is controlled centrally, maintaining state across the UI and allowing the component to function as intended.

## NEW QUESTION # 80

A recent Health Check report of your application indicates an increased risk of large context size in the interfaces.

What are two possible contributors to this risk? (Choose two.)

- A. Multiple local variables hold duplicate data.
- B. The load variable has a web service response as JSON.
- C. Local variables are set to refresh every five minutes.
- D. Data transformation is performed inside the interface rather than delegated to the source system.

**Answer: A,D**

Explanation:

Performing data transformation inside the interface can increase the amount and size of context data stored, raising context size risk. Multiple local variables holding duplicate data unnecessarily inflate the interface's memory footprint, contributing to large context size.

## NEW QUESTION # 81

.....

If you are ready for the ACD201 exam for a long time, but lack of a set of suitable ACD201 learning materials, I will tell you that you are so lucky to enter this page. We are such ACD201 exam questions that you can use our products to prepare the exam and

obtain your dreamed ACD201certificates. We all know that if you desire a better job post, you have to be equipped with appropriate professional quality and an attitude of keeping forging ahead. And we can give what you need!
