

2026 Useful Exam Dumps SPLK-3002 Zip | 100% Free Valid SPLK-3002 Test Pdf

2026 Latest Exam4Labs SPLK-3002 PDF Dumps and SPLK-3002 Exam Engine Free Share: <https://drive.google.com/open?id=1hrj4VCQJHC6g4Fe7hSg7MA8PmBHJXfN1>

Time is very important for everyone. As the saying goes, time is life so spend it wisely. We believe that you also don't want to spend much time on preparing for your Splunk IT Service Intelligence Certified Admin exam. How can you pass your exam and get your certificate in a short time? Our SPLK-3002 exam torrent will be your best choice to help you achieve your aim. According to customers' needs, our product was revised by a lot of experts; the most functions of our Splunk IT Service Intelligence Certified Admin exam dumps are to help customers save more time, and make customers relaxed. If you choose to use our SPLK-3002 Test Quiz, you will find it is very easy for you to pass your exam in a short time. You just need to spend 20-30 hours on studying; you will have more free time to do other things.

The SPLK-3002 exam covers a wide range of topics, including installing and configuring ITSI, managing service health and KPIs, creating service models, and using machine learning to detect anomalies and predict future issues. SPLK-3002 exam is designed for IT professionals who have experience with Splunk Enterprise and are looking to expand their skills and knowledge in IT service management. Passing the SPLK-3002 exam is a great way to demonstrate your expertise and proficiency in using Splunk ITSI and to advance your career in IT service management.

Splunk SPLK-3002 certification exam is designed to validate the skills and knowledge of IT professionals in managing and administering Splunk IT Service Intelligence (ITSI) environments. Splunk IT Service Intelligence Certified Admin certification is intended for individuals who have a good understanding of Splunk, ITSI, and the use of data analytics to deliver business value. SPLK-3002 Exam is aimed at professionals who work with data analytics, IT operations, and business stakeholders to improve service delivery and customer satisfaction.

Preparing for the SPLK-3002 exam requires a significant amount of time and effort, as it covers a wide range of topics related to ITSI. Candidates must have a deep understanding of ITSI components, advanced analytics, and the use of ITSI for monitoring and troubleshooting IT environments. To prepare for the exam, candidates can take advantage of Splunk's official training courses, study guides, and practice exams, as well as engage in hands-on practice with ITSI.

SPLK-3002 Learning Material: Splunk IT Service Intelligence Certified Admin & SPLK-3002 Practice Test

The existence of our SPLK-3002 learning guide is regarded as in favor of your efficiency of passing the SPLK-3002 exam. At the same time, our company is becoming increasingly obvious degree of helping the exam candidates with passing rate up to 98 to 100 percent. All our behaviors are aiming squarely at improving your chance of success. We are trying to developing our quality of the SPLK-3002 Exam Questions all the time and perfecting every detail of our service on the SPLK-3002 training engine.

Splunk IT Service Intelligence Certified Admin Sample Questions (Q75-Q80):

NEW QUESTION # 75

Which index is used to store KPI values?

- A. **itsi_summary_metrics**
- B. itsi_service_health
- C. itsi_summary
- D. itsi_metrics

Answer: A

Explanation:

The IT Service Intelligence (ITSI) metrics summary index, `itsi_summary_metrics`, is a metrics-based summary index that stores KPI data.

Reference:

A is the correct answer because the `itsi_summary_metrics` index is used to store KPI values in ITSI. This index improves the performance of the searches dispatched by ITSI, particularly for very large environments. Every KPI is summarized in both the `itsi_summary` events index and the `itsi_summary_metrics` metrics index. Reference: Overview of ITSI indexes

NEW QUESTION # 76

Which of the following is an advantage of using adaptive time thresholds?

- A. Automatically adjust aggregation policy grouping to manage escalating severity.
- B. **Automatically update thresholds daily to manage dynamic changes to KPI values.**
- C. Automatically adjust KPI calculation to manage dynamic event data.
- D. Automatically adjust correlation search thresholds to adjust sensitivity over time.

Answer: B

Explanation:

Reference:

Adaptive thresholds are thresholds calculated by machine learning algorithms that dynamically adapt and change based on the KPI's observed behavior. Adaptive thresholds are useful for monitoring KPIs that have unpredictable or seasonal patterns that are difficult to capture with static thresholds. For example, you might use adaptive thresholds for a KPI that measures web traffic volume, which can vary depending on factors such as holidays, promotions, events, and so on. The advantage of using adaptive thresholds is:

A) Automatically update thresholds daily to manage dynamic changes to KPI values. This is true because adaptive thresholds use historical data from a training window to generate threshold values for each time block in a threshold template. Each night at midnight, ITSI recalculates adaptive threshold values for a KPI by organizing the data from the training window into distinct buckets and then analyzing each bucket separately. This way, the thresholds reflect the most recent changes in the KPI data and account for any anomalies or trends.

The other options are not advantages of using adaptive thresholds because:

B) Automatically adjust KPI calculation to manage dynamic event data. This is not true because adaptive thresholds do not affect the KPI calculation, which is based on the base search and the aggregation method. Adaptive thresholds only affect the threshold values that are used to determine the KPI severity level.

C) Automatically adjust aggregation policy grouping to manage escalating severity. This is not true because adaptive thresholds do not affect the aggregation policy, which is a set of rules that determines how to group notable events into episodes. Adaptive thresholds only affect the threshold values that are used to generate notable events based on KPI severity level.

D) Automatically adjust correlation search thresholds to adjust sensitivity over time. This is not true because adaptive thresholds do not affect the correlation search, which is a search that looks for relationships between data points and generates notable events. Adaptive thresholds only affect the threshold values that are used by KPIs, which can be used as inputs for correlation searches.

NEW QUESTION # 77

Which of the following describes a way to delete multiple duplicate entities in ITSI?

- A. All of the above.
- B. Via the entity lister page.
- C. Via a search using the `| deleteentity` command.
- D. **Via a CSV upload.**

Answer: D

Explanation:

Explanation

Import entities from CSV files that contain one or more entity definitions. Importing entities from CSV files is an efficient way to define multiple entities.

NEW QUESTION # 78

When installing ITSI to support a Distributed Search Architecture, which of the following items apply?
(Choose all that apply.)

- A. Copy SA-IndexCreation to the etc/apps directory on the index cluster master node.
- **B. Copy SA-IndexCreation to all indexers.**
- C. Extract installer package into etc/apps directory of the cluster deployer node.
- D. Extract ITSI app package into etc/apps directory of search head.

Answer: B

Explanation:

Explanation

Copy SA-IndexCreation to \$SPLUNK_HOME/etc/apps/ on all individual indexers in your environment.

NEW QUESTION # 79

When changing a service template, which of the following will be added to linked services by default?

- **A. New KPIs.**
- B. Entity Rules.
- C. Health score.
- D. Thresholds.

Answer: A

Explanation:

* C. New KPIs. This is true because when you add new KPIs to a service template, they will be automatically added to all the services that are linked to that template. This helps you keep your services consistent and up-to-date with the latest KPI definitions. The other options will not be added to linked services by default because:

* A. Thresholds. This is not true because when you change thresholds in a service template, they will not affect the existing thresholds in the linked services. You need to manually apply the threshold changes to each linked service if you want them to inherit the new thresholds from the template.

* B. Entity rules. This is not true because when you change entity rules in a service template, they will not affect the existing entity rules in the linked services. You need to manually apply the entity rule changes to each linked service if you want them to inherit the new entity rules from the template.

* D. Health score. This is not true because when you change health score settings in a service template, they will not affect the existing health score settings in the linked services. You need to manually apply the health score changes to each linked service if you want them to inherit the new health score settings from the template.
