But from the point of view of customers, our Data-Architect Actual Exam will not let you suffer from this. We have a high pass rate of our Data-Architect study materials as 98% to 100%. Our Data-Architect learning quiz will be your best

choice.

## Salesforce Certified Data Architect Sample Questions (Q93-Q98):

### NEW QUESTION # 93

Universal Containers (UC) owns several Salesforce orgs across a variety of business units. UC management has declared that it needs the ability to report on Accounts and Opportunities from each org in one place. Once the data is brought together into a global view, management would like to use advanced AI-driven analytics on the dataset.

Which tool should a data architect recommend to accomplish this reporting requirement?

- A. Use Einstein Analytics for multi-org.
- B. Run standard reports and dashboards.
- C. Install a third-party AppExchange tool for multi-org reporting.
- D. Write a Python script to aggregate and visualize the data.

**Answer: A**

Explanation:

According to this article, Einstein Analytics for multi-org can help UC to report on accounts and opportunities from each org in one place. It can also provide advanced AI-driven analytics on the dataset using Einstein Discovery.

### NEW QUESTION # 94

UC has large amount of orders coming in from its online portal. Historically all order are assigned to a generic user.

Which 2 measures should data architect recommend to avoid any performance issues while working with large number of order records? Choose 2 answers:

- A. Salesforce handles the assignment of orders automatically and there is no performance impact.
- B. Create a role at top of role hierarchy and assign the role to the generic user.
- C. Clear the role field in the generic user record.
- D. Create a pool of generic users and distribute the assignment of memory to the pool of users.

**Answer: B,C**

### NEW QUESTION # 95

Universal Containers (UC) has three systems: Salesforce, a cloud -based ERP system, and an on -premise Order Management System (OMS). An architect has been tasked with creating a solution that uses Salesforce as the system of record for Leads and the OMS as the system of record for Account and Contacts. UC wants Accounts and Contacts to be able to maintain their names in each system (i.e., "John Doe" in the OMS and "Johnny Doe" in Salesforce), but wants to have a consolidated data store which links referenced records across the systems. What approach should an architect suggest so the requirements are met?

- A. Implement a Master Data Management strategy to reconcile Leads, Accounts, and Contacts.
- B. Have Salesforce poll the OMS nightly and bring in the desired Accounts and Contacts.
- C. Use the Streaming API to send Account and Contact data from Salesforce to the OMS.
- D. Implement an integration tool to send OMS Accounts and Contacts to Salesforce.

**Answer: A**

### NEW QUESTION # 96

Cloud Kicks needs to purge detailed transactional records from Salesforce. The data should be aggregated at a summary level and available in Salesforce.

What are two automated approaches to fulfill this goal? (Choose two.)

- A. Third-party Integration Tool (ETL)
- B. Third-party Business Intelligence system
- C. Apex Triggers
- D. Schedulable Batch Apex

**Answer: A,D**

Explanation:

Both A and B are automated approaches to purge detailed transactional records from Salesforce and aggregate them at a summary level. You can use a third-party integration tool (ETL) or schedulable batch Apex to perform these tasks. Option C is not correct because a third-party business intelligence system does not purge data from Salesforce, but only analyzes it. Option D is not correct because Apex triggers are not automated, but execute when a record is inserted, updated, deleted, or undeleted.

#### NEW QUESTION # 97

Universal Containers (UC) has deployed Salesforce to manage Marketing, Sales, and Support efforts in a multi-system ERP environment. After reaching the limits of native reports & dashboards, UC leadership is looking to understand what options can be used to provide more analytical insights. What two approaches should an architect recommend? Choose 2 answers.

- **A. Wave Analytics**
- B. Setup Audit Trails
- C. Weekly Snapshots
- **D. AppExchange Apps**

**Answer: A,D**

Explanation:

According to the exam guide, one of the objectives is to "describe the use cases and considerations for using AppExchange apps and Wave Analytics". This implies that options A and B are both valid approaches to provide more analytical insights. Option C is not correct because weekly snapshots are used to track changes over time, not to provide advanced analytics. Option D is not correct because setup audit trails are used to monitor changes in the setup menu, not to provide analytical insights.

#### NEW QUESTION # 98

.....

No matter which country you are currently in, you can be helped by our Data-Architect real exam. Up to now, our Data-Architect training quiz has helped countless candidates to obtain desired certificate. If you want to be one of them, please take a two-minute look at our Data-Architect Real Exam. And you can just visit our website to know its advantages. You can free download the demos to have a look at our quality and the accuracy of the content easily.
