HCIP-Datacom-Core Technology V1.0 prep torrent & H12-821_V1.0 study questions & HCIP-Datacom-Core Technology V1.0 dumps pdf

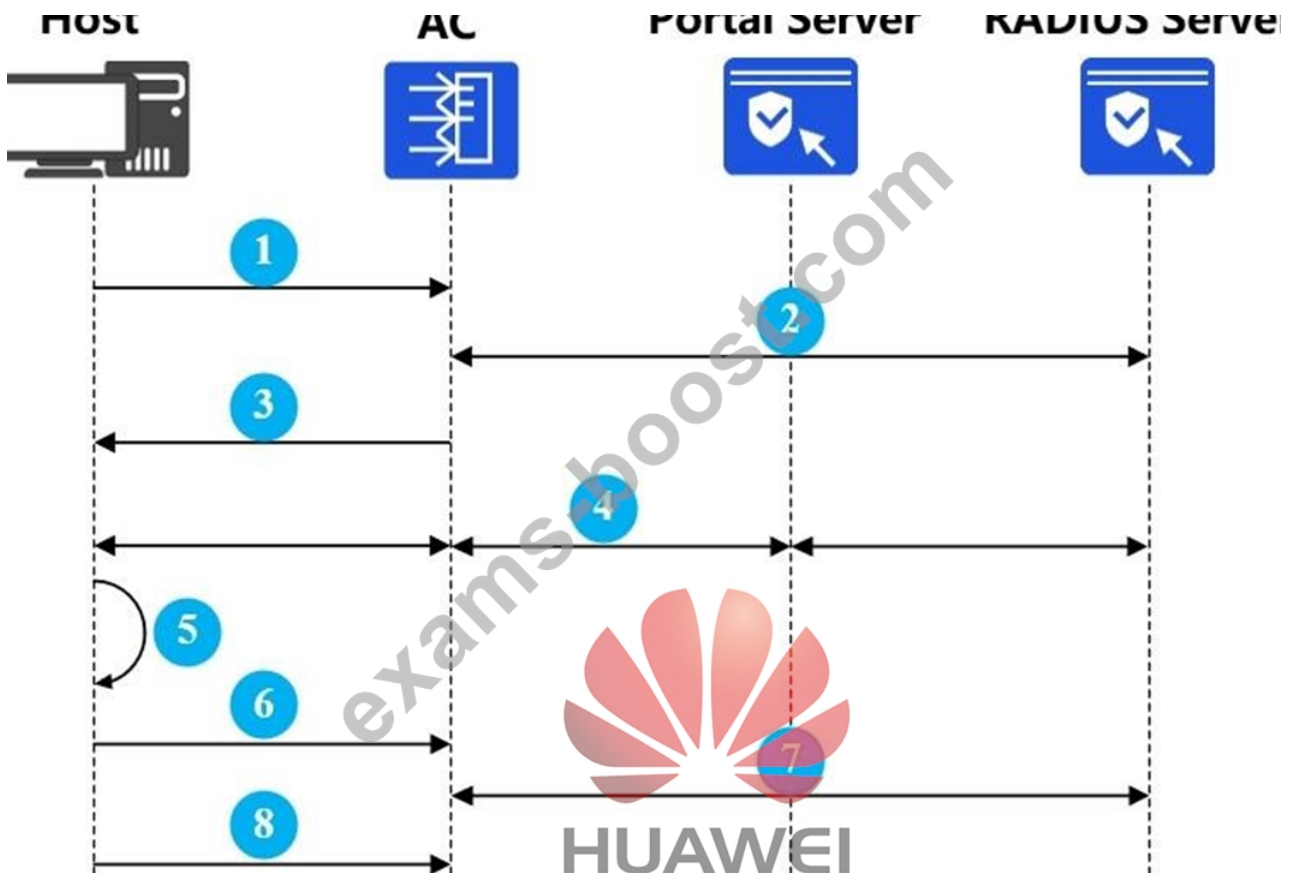

Generally speaking, you can achieve your basic goal within a week with our H12-821_V1.0 study guide. Besides, for new updates happened in this line, our experts continuously bring out new ideas in this H12-821_V1.0 exam for you. The new supplemental updates will be sent to your mailbox if there is and be free. Because we promise to give free update of our H12-821_V1.0 Learning Materials for one year to all our customers.

Huawei H12-821_V1.0 certification exam is ideal for network engineers and administrators who are interested in advancing their careers in the data communication field. H12-821_V1.0 exam tests the candidate's understanding of various core technologies such as routing, switching, and network security. Moreover, the certification exam enables professionals to gain expertise in the latest technologies and industry trends, which is essential for staying up-to-date in today's fast-paced technology-driven world. Passing the Huawei H12-821_V1.0 Exam signifies that the professional has demonstrated a high level of proficiency in data communication and is capable of implementing and managing complex network infrastructure.

Huawei HCIP-Datacom-Core Technology V1.0 Sample Questions (Q124-Q129):

NEW QUESTION # 124

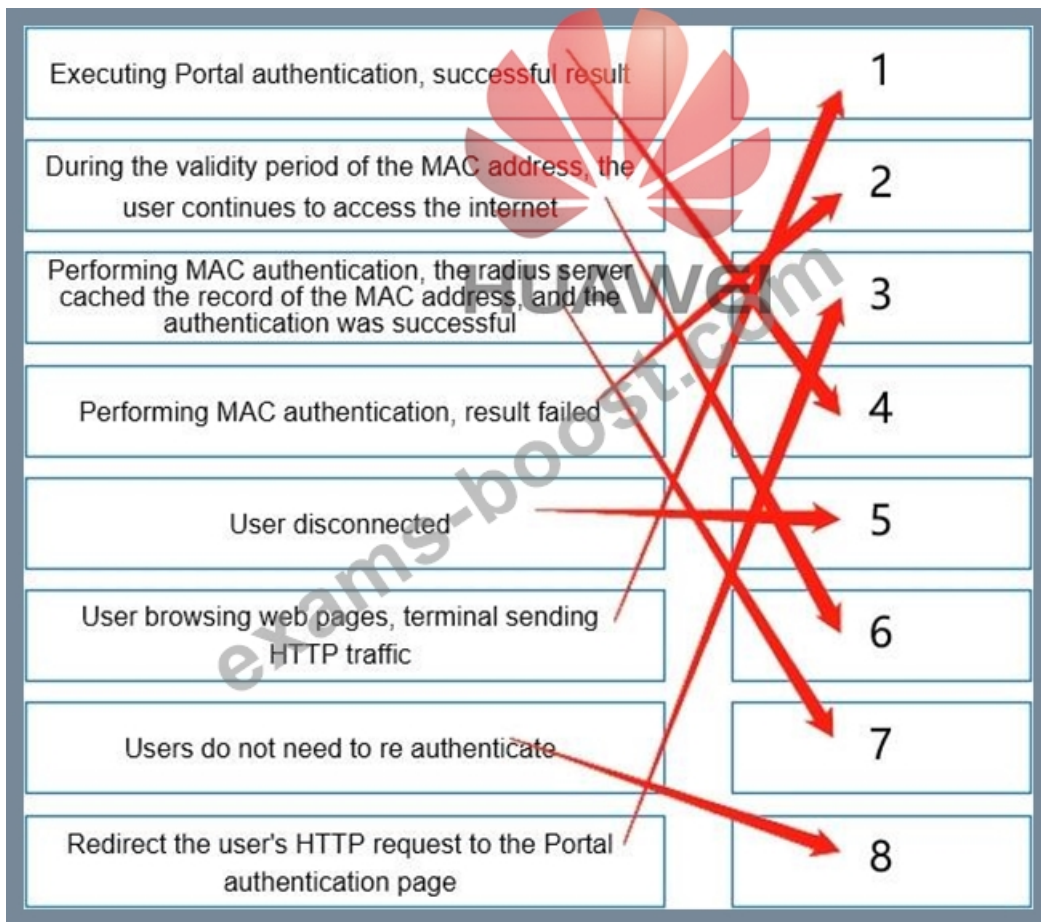

To enhance user access security, a company deployed MAC priority Portal authentication. As shown in the figure, please pair the following authentication steps in order.

Executing Portal authentication, successful result	1
During the validity period of the MAC address, the user continues to access the internet	2
Performing MAC authentication, the radius server cached the record of the MAC address, and the authentication was successful	3
Performing MAC authentication, result failed	4
User disconnected	5
User browsing web pages, terminal sending HTTP traffic	6
Users do not need to re authenticate	7
Redirect the user's HTTP request to the Portal authentication page	8

Answer:

Explanation:

NEW QUESTION # 125

Please sequence the process of allocating VLANs to terminals from the VLAN Pool.

- A. Terminal access to VAP
- B. Assign VLAN to the terminal according to the JiangAN algorithm
- C. The terminal accesses from the divided VLAN
- D. Determine the VLAN Pool bound to the VAP and the VLAN algorithm

Answer: A,B,C,D

NEW QUESTION # 126

Which of the following PIM protocol packets have unicast destination addresses.

- A. Bootstrap
- B. Register Stop
- C. Assert
- D. Graft

Answer: D

NEW QUESTION # 127

The IP prefix list configuration on a Huawei router is shown below. Which of the following routes can match this IP prefix list?

bash

Copy

```
[huawei] ip ip-prefix test index 10 permit 10.0.0.0 8 less-equal 32
```

- A. 10.1.1.0/24

- B. 10.0.0.0/16
- C. 10.1.1.1/32
- D. 10.1.1.0/6

Answer: A,B,C

Explanation:

Comprehensive and Detailed Step-by-Step Explanation:

1. Understanding the Prefix List Configuration:

The command `ip ip-prefix test index 10 permit 10.0.0.0 8 less-equal 32` defines the following:

- * The prefix base is 10.0.0.0 with a mask length of 8 bits.
- * The less-equal 32 condition allows routes with mask lengths ranging from 8 to 32 bits to match.

2. Analysis of Each Route:

Option A: 10.1.1.1/32

* Correct.

* The prefix 10.1.1.1/32 falls within the 10.0.0.0/8 network range and has a mask length of 32 bits, which satisfies the less-equal 32 condition.

Option B: 10.1.1.0/6

* Incorrect.

* The prefix 10.1.1.0/6 has a mask length of 6 bits, which is shorter than the base prefix length of 8. It does not satisfy the condition.

Option C: 10.1.1.0/24

* Correct.

* The prefix 10.1.1.0/24 falls within the 10.0.0.0/8 network range and has a mask length of 24 bits, which satisfies the less-equal 32 condition.

Option D: 10.0.0.0/16

* Correct.

* The prefix 10.0.0.0/16 falls within the 10.0.0.0/8 network range and has a mask length of 16 bits, which satisfies the less-equal 32 condition.

3. Summary:

* The prefixes that match the configuration are 10.1.1.1/32, 10.1.1.0/24, and 10.0.0.0/16.

NEW QUESTION # 128

Which of the following statements about roaming is correct? (Multiple choice)

- A. An AP that realizes wireless roaming does not need to have a signal covering the overlapping area
- B. AP that realizes wireless roaming must have signal coverage overlapping areas
- C. AP that realizes wireless roaming must be in the same Extended Service Set (ESS)
- D. The AP that realize wireless roaming must be in the same basic service set (BSS)

Answer: B,C

NEW QUESTION # 129
