The price for 350-701 study guide is quite reasonable, no matter you are a student or employee in the company, you can afford them. Just think that, you only need to spend some money, you can get a certificate as well as improve your ability. Besides, we also pass guarantee and money back guarantee for you fail to pass the exam after you have purchasing 350-701 Exam Dumps from us. We can give you free update for 365 days after your purchasing. If you have any questions about the 350-701 study guide, you can have a chat with us.

The development and progress of human civilization cannot be separated from the power of knowledge. You must learn practical knowledge to better adapt to the needs of social development. Now, our 350-701 learning prep can meet your requirements. You will have good command knowledge with the help of our study materials. The certificate is of great value in the job market. Our 350-701 learning prep can exactly match your requirements and help you pass exams and obtain certificates. As you can see, our products are very popular in the market. Time and tides wait for no people. Take your satisfied 350-701 Actual Test guide and start your new learning journey. After learning our learning materials, you will benefit a lot. Being brave to try new things, you will gain meaningful knowledge.

Highly-demanded 350-701 Exam Braindumps demonstrate excellent Learning Questions - Test4Sure

Without doubt, our 350-701 practice dumps keep up with the latest information and contain the most valued key points that will show up in the real 350-701 exam. Meanwhile, we can give you accurate and instant suggestion for our customer services know every detail of our 350-701 Exam Questions. And they are pleased to give guide for 24 hours online. You can get assistant by them as long as you made your inquire.

Cisco Implementing and Operating Cisco Security Core Technologies Sample Questions (Q432-Q437):

NEW QUESTION # 432

Refer to the exhibit. What is the result of the Python script?

- A. It uses the POST HTTP method to obtain a token to be used for authentication.
- B. It uses the GET HTTP method to obtain a username and password to be used for authentication
- C. It uses the POST HTTP method to obtain a username and password to be used for authentication.
- D. It uses the GET HTTP method to obtain a token to be used for authentication.

Answer: A

Explanation:

The Python script is using the `dnac_login` function to authenticate to a Cisco DNA Center server and obtain a token that can be used for subsequent API calls. The function takes three parameters: `host`, `username`, and `password`. It constructs a URL for the authentication endpoint, which is `https://{}/api/system/v1/auth/token`. It then uses the `requests` library to send a POST HTTP request to the URL, passing the `username` and `password` as HTTP Basic Authentication credentials, and setting the headers to indicate the expected content type and response format. The function also disables the SSL verification by setting the `verify` parameter to `False`. This is not recommended for production environments, as it exposes the script to potential security risks. The function then returns the token value from the JSON response, which is accessed by using the `response.json()["Token"]` syntax. The token can then be used as a bearer token for subsequent API calls to the Cisco DNA Center server.

References:

- * Implementing and Operating Cisco Security Core Technologies (SCOR) v1.0, Module 9: Content Security, Lesson 9.3: Cisco DNA Center APIs
- * Cisco DNA Center Platform API Reference, Authentication API
- * Refer to the exhibit. What will happen when the Python script is executed?

NEW QUESTION # 433

An engineer must force an endpoint to re-authenticate an already authenticated session without disrupting the endpoint to apply a new or updated policy from ISE. Which CoA type achieves this goal?

- A. CoA Session Query
- B. CoA Terminate
- C. CoA Reauth
- D. Port Bounce

Answer: C

Explanation:

CoA (Change of Authorization) is a feature that allows ISE to dynamically change the authorization attributes of an endpoint after it has been authenticated. CoA can be triggered by various events, such as posture assessment, profiling, or manual intervention¹. There are different types of CoA that ISE can send to the network access device (NAD) to perform different actions on the endpoint session. The CoA type that achieves the goal of forcing an endpoint to re-authenticate without disrupting its session is CoA Reauth. CoA Reauth instructs the NAD to initiate a new RADIUS authentication for the endpoint, which allows ISE to apply a new or updated policy based on the latest attributes of the endpoint². The other CoA types do not achieve this goal, as they either disconnect the endpoint session or do not change the authorization attributes. Port Bounce causes the NAD to shut down and bring up the port where the endpoint is connected, which effectively disconnects and reconnects the endpoint session². CoA Terminate causes the NAD to terminate the endpoint session and send an Accounting-Stop message to ISE². CoA Session Query causes the NAD to send an Accounting-Request message to ISE with the current session information, but does not change the authorization attributes of the endpoint². References:

NEW QUESTION # 434

An administrator is configuring a DHCP server to better secure their environment. They need to be able to ratelimit the traffic and ensure that legitimate requests are not dropped. How would this be accomplished?

- A. Set a trusted interface for the DHCP server
- B. Set the DHCP snooping bit to 1
- C. Enable ARP inspection for the required VLAN
- D. Add entries in the DHCP snooping database

Answer: A

Explanation:

To understand DHCP snooping we need to learn about DHCP spoofing attack first.

□ DHCP spoofing is a type of attack in that the attacker listens for DHCP Requests from clients and answers them with fake DHCP Response before the authorized DHCP Response comes to the clients. The fake DHCP Response often gives its IP address as the client default gateway -> all the traffic sent from the client will go through the attacker computer, the attacker becomes a "man-in-the-middle".

The attacker can have some ways to make sure its fake DHCP Response arrives first. In fact, if the attacker is "closer" than the DHCP Server then he doesn't need to do anything. Or he can DoS the DHCP Server so that it can't send the DHCP Response.

DHCP snooping can prevent DHCP spoofing attacks. DHCP snooping is a Cisco Catalyst feature that determines which switch ports can respond to DHCP requests. Ports are identified as trusted and untrusted.

□ Only ports that connect to an authorized DHCP server are trusted, and allowed to send all types of DHCP messages. All other ports on the switch are untrusted and can send only DHCP requests. If a DHCP response is seen on an untrusted port, the port is shut down.

NEW QUESTION # 435

Which Cisco security solution provides patch management in the cloud?

- A. Cisco Tetration
- B. Cisco CloudLock
- C. Cisco Umbrella
- D. Cisco ISE

Answer: A

Explanation:

Cisco Tetration is a Cisco security solution that provides patch management in the cloud. Patch management is the process of identifying, acquiring, installing, and verifying patches for products and systems to correct security and functionality problems in software and firmware¹. Cisco Tetration is a cloud-native platform that delivers comprehensive workload protection for multicloud data centers by enabling a zero-trust model using segmentation². One of the features of Cisco Tetration is software vulnerability detection and patch management, which allows users to identify software vulnerabilities on workloads, prioritize patching based on risk scores, and automate patch deployment using orchestration tools³. Cisco Tetration leverages the National Vulnerability Database (NVD) and Cisco Talos Intelligence Group to provide up-to-date information on software vulnerabilities and their severity levels³. Cisco Tetration also supports patch management for both Windows and Linux operating systems, as well as third-party applications such as Apache, Java, MySQL, and Oracle⁴. Therefore, the correct answer is D. Cisco Tetration. NEW QUESTION # 436

What is the intent of a basic SYN flood attack?

- A. to exceed the threshold limit of the connection queue
- B. to flush the register stack to re-initiate the buffers
- C. to cause the buffer to overflow
- D. to solicit DNS responses

Answer: A

Explanation:

A basic SYN flood attack is a type of denial-of-service (DoS) attack that aims to exhaust the resources of a server by sending a large number of SYN packets and not completing the TCP three-way handshake. The intent of this attack is to exceed the threshold limit of the connection queue, which is the data structure that stores the information about the pending connections. By doing so, the

attacker prevents legitimate clients from establishing connections with the server, as the server cannot accept any more SYN requests. A SYN flood attack can be performed with spoofed IP addresses or without IP spoofing, depending on the attacker's strategy and the server's configuration. NEW QUESTION # 437

.....

Experts at Test4Sure strive to provide applicants with valid and updated Implementing and Operating Cisco Security Core Technologies 350-701 exam questions to prepare from, as well as increased learning experiences. We are confident in the quality of the Cisco 350-701 preparational material we provide and back it up with a money-back guarantee. Test4Sure provides Cisco 350-701 Exam Questions in multiple formats to make preparation easy and you can prepare yourself according to your convenience way.

Interactive 350-701 Questions: <https://www.test4sure.com/350-701-pass4sure-vce.html>

We promise you that if you fail to pass the exam after using 350-701 training materials of us, we will give you full refund, All the Test4Sure Cisco 350-701 practice questions are real and based on actual Implementing and Operating Cisco Security Core Technologies (350-701) exam topics, Cisco Reliable 350-701 Mock Test Our customer service is 7/24 online, With Test4Sure Implementing and Operating Cisco Security Core Technologies (350-701) practice test questions you can start Cisco 350-701 exam preparation immediately.

Group administrators can add and remove users from the group, Adding dial-up networking support, We promise you that if you fail to pass the exam after using 350-701 Training Materials of us, we will give you full refund.

2026 Cisco Realistic Reliable 350-701 Mock Test Free PDF

All the Test4Sure Cisco 350-701 practice questions are real and based on actual Implementing and Operating Cisco Security Core Technologies (350-701) exam topics, Our customer service is 7/24 online.

With Test4Sure Implementing and Operating Cisco Security Core Technologies (350-701) practice test questions you can start Cisco 350-701 exam preparation immediately, We can tell you that all the type setting 350-701 is logical and beautiful, which totally accords with your usual reading habits.
