### NEW QUESTION # 57

In the case that an algorithm you want to use isn't algorithmically explainable, AI systems should try to do the following:

- A. Provide a means to interpret AI results so that cause and effect can be represented.
- B. Provide a means to have a different team on the project
- C. Provide a means to have contestability of the algorithm selected
- D. Provide a means to reverse-engineer the algorithm to inspect its performance

**Answer: A**

Explanation:

Under Required AI Explainability Considerations, CPMAI mandates that when a chosen model is a "black-box" with limited native interpretability, teams must implement post-hoc interpretability techniques (e.g., feature importance plots, surrogate models) to "interpret AI results so that cause and effect can be represented," ensuring stakeholders understand why the model makes its predictions.
