WGU Cybersecurity Architecture and Engineering (KFO1/D488) Sample Questions (Q36-Q41):

NEW QUESTION # 36

An employee needs to execute a program from the command line.
Which peripheral device should be used?

- A. Printer
- B. Speaker
- C. Hard drive

- **D. Keyboard**

Answer: D

Explanation:

- * The employee needs to execute a program from the command line, which requires inputting commands into the computer.
- * The primary device for inputting commands is the keyboard.
- * Other options like the hard drive, speaker, and printer are not used for inputting commands.
- * The hard drive is used for data storage.
- * The speaker outputs sound.
- * The printer outputs documents.
- * Therefore, the correct peripheral device for this task is the keyboard.

References:

- * "Computer Fundamentals" by Anita Goel, which discusses input devices and their uses.
- * "The Principles of Information Systems" by Ralph Stair and George Reynolds, which details peripheral devices and their functions.

NEW QUESTION # 37

A cybersecurity analyst at a healthcare organization was tasked with analyzing the indicators of compromise (IOCs) to identify potential threats and vulnerabilities within the enterprise. The analyst notices unknown users logging on to the company's wireless local-area network (WLAN).

What is a potential vulnerability the healthcare organization is facing based on the IOCs identified?

- A. Up-to-date anti-malware software
- **B. Unsecured wireless access points**
- C. A strong password policy
- D. Regular security awareness training for employees

Answer: B

Explanation:

The correct answer is A - Unsecured wireless access points.

WGU Cybersecurity Architecture and Engineering (KFO1 / D488) explains that unauthorized logins to a WLAN often indicate poorly secured wireless access points, such as those lacking strong encryption (e.g., WPA2/WPA3), not using strong passwords, or having open access without authentication. This vulnerability can allow attackers to access internal systems and sensitive data.

Up-to-date anti-malware software (B), a strong password policy (C), and regular security training (D) are good security practices but do not directly explain unauthorized WLAN access.

Reference Extract from Study Guide:

"Unauthorized wireless access often results from unsecured wireless configurations, including weak encryption, open networks, or default credentials, posing significant risks to organizational assets."

NEW QUESTION # 38

What is a function of a proxy server?

- **A. It acts as a giant cache of web pages that anyone in the organization has recently retrieved.**
- B. It responds to HTTP requests and can execute scripts to generate dynamic pages.
- C. It responds to user queries to create, manipulate, and retrieve records from a database.
- D. It stores files that any user of the network may wish to access.

Answer: A

Explanation:

* Proxy Server Functions:

* Caching: Proxy servers can store copies of web pages and other web resources. This helps to improve load times for frequently accessed resources and reduce bandwidth usage.

* Security: They can provide additional security by anonymizing the user's IP address and filtering unwanted content.

* Correct Function:

* Acting as a cache (B) is one of the primary functions, where it stores web pages that users in the organization have recently accessed.

- * Incorrect Functions:
 - * A: Describes a file server.
 - * C: Describes a database server.
 - * D: Describes a web server.
- References:
- * Proxy servers: Proxy Server
 - * Caching in proxy servers: Caching Proxy

NEW QUESTION # 39

An IT organization needs to enable secure communication across virtual networks in Microsoft Azure and Amazon Web Services. Which protocol will offer the most reliable and secure method for data transport?

- A. Internet Protocol Security (IPsec)
- B. Secure Shell (SSH)
- C. File Transfer Protocol (FTP)

Answer: A

Explanation:

IPsec is an end-to-end encryption protocol suite that operates at the network layer, providing authentication, integrity, and confidentiality between virtual networks—even across different cloud environments like Azure and AWS.

NIST SP 800-77 Rev. 1 (Guide to IPsec VPNs):

"IPsec provides network-layer protection through authentication headers (AH) and encapsulating security payloads (ESP), suitable for securing traffic across untrusted environments." FTP is insecure, and SSH is more suitable for command-line access or remote sessions—not secure VPC-to-VPC tunnels.

#WGU Course Alignment:

Domain: Cryptography

Topic: Use encryption protocols like IPsec for secure data transmission between networks

NEW QUESTION # 40

Which two options allow an application to access a database?

Choose 2 answers

- A. Graphical user interface (GUI)
- B. Java Database Connectivity (JDBC)
- C. Open Database Connectivity (ODBC) application
- D. Structured Query Language (SQL)
- E. Database management system (DBMS)

Answer: B,D

Explanation:

* SQL is a standard language used to communicate with and manage databases. It allows applications to perform operations such as querying, updating, and managing data.

* JDBC is an API in Java that enables Java applications to interact with databases. It provides methods for querying and updating data in a database using SQL.

* DBMS (Database Management System) is the system software for creating and managing databases but not directly used by applications for database access.

* ODBC (Open Database Connectivity) is another standard API but specific to applications in a broader range of languages and platforms.

* GUI (Graphical User Interface) is a user interface and not a method for applications to access databases.
