New SPLK-2003 Test Guide, SPLK-2003 Latest Exam Discount

Our SPLK-2003 practice materials are distributed at acceptable prices. These interactions have inspired us to do better. Now passing rate of them has reached up to 98 to 100 percent. By keeping minimizing weak points and maiming strong points, our SPLK-2003 Exam Materials are nearly perfect for you to choose. As a brand now, many companies strive to get our SPLK-2003 practice materials to help their staffs achieve more certifications for our quality and accuracy.

Splunk Phantom Certified Admin Sample Questions (Q19-Q24):

NEW QUESTION # 19
Which of the following can be done with the System Health Display?

- A. Reset DECIDED to reset playbook environments back to at-start conditions.
- B. View a single column of status for SOAR processes. For metrics, click Details.
- C. Partially rewind processes, which is useful for debugging.

- D. Create a temporary, edited version of a process and test the results.

Answer: B

Explanation:
System Health Display is a dashboard that shows the status and performance of the SOAR processes and components, such as the automation service, the playbook daemon, the DECIDED process, and the REST API. One of the things that can be done with the System Health Display is to reset DECIDED, which is a core component of the SOAR automation engine that handles the execution of playbooks and actions. Resetting DECIDED can be useful for troubleshooting or debugging purposes, as it resets the playbook environments back to at-start conditions, meaning that any changes made by the playbooks are discarded and the playbooks are reloaded. To reset DECIDED, you need to click on the Reset DECIDED button on the System Health Display dashboard.

NEW QUESTION # 20
Which of the following is a reason to create a new role in SOAR?

- A. To define a set of users who have access to a special label.
- B. To define a set of users who have access to a restricted app.
- C. To define a set of users who have access to a sensitive tag.
- D. To define a set of users who have access to an event's reports.

Answer: B

Explanation:
In Splunk SOAR, roles serve multiple purposes, including granting users permission to access system functionality or restricting access to parts of the system1. Creating a new role is often necessary when there is a need to define a specific set of users who have access to a restricted app. This allows for granular control over who can interact with certain apps, ensuring that only authorized users can use them. While roles can also be used to manage access to labels, reports, and tags, the primary reason for creating a new role is typically related to controlling access to apps and their associated functionalities within the SOAR platform1.

Splunk SOAR documentation on managing roles and permissions1.

NEW QUESTION # 21
Which two playbook blocks can discern which path in the playbook to take next?

- A. Filter and prompt blocks.
- B. Prompt and decision blocks.
- C. Decision and action blocks.
- D. Filter and decision blocks.

Answer: B

Explanation:
In Splunk SOAR playbooks, the blocks that can discern which path to take next are the prompt and decision blocks. The prompt block allows the playbook to pause and wait for user input, which can then determine the subsequent path of execution based on the response provided.
The decision block evaluates conditions based on data within the playbook and directs the flow to different paths accordingly.
The decision block is used to change the flow of artifacts by performing IF, ELSE IF, or ELSE functions. When an artifact meets a True condition, it is passed downstream to the corresponding block in the playbook flow. The prompt block, on the other hand, interacts with users to make decisions during playbook execution, which can also influence the direction of the playbook's flow.

NEW QUESTION # 22
Which is the primary system requirement that should be increased with heavy usage of the file vault?

- A. Number of processors.
- B. Bandwidth of network.
- C. Amount of storage.
- D. Amount of memory.

Answer: C

Explanation:
The primary system requirement that should be increased with heavy usage of the file vault is the amount of storage. The file vault is a secure repository for storing files on Phantom. The more files are stored, the more storage space is needed. The other options are not directly related to the file vault usage. See [File vault] for more information.
Heavy usage of the file vault in Splunk SOAR necessitates an increase in the amount of storage available. The file vault is used to securely store files associated with cases, such as malware samples, logs, and other artifacts relevant to an investigation. As the volume of files and the size of stored data grow, ensuring sufficient storage capacity becomes critical to maintain performance and ensure that all necessary data is retained for analysis and evidence.

NEW QUESTION # 23
Without customizing container status within SOAR, what are the three types of status for a container?

- A. Low, Medium, Critical
- B. New, Open, Resolved
- C. Low, Medium, High
- D. New, In Progress, Closed

Answer: D

Explanation:
In Splunk SOAR, without any customization, the three default statuses for a container are New, In Progress, and Closed. These statuses are designed to reflect the lifecycle of an incident or event within the platform, from its initial detection and logging (New), through the investigation and response stages (In Progress), to its final resolution and closure (Closed). These statuses help in organizing and prioritizing incidents, tracking their progress, and ensuring a structured workflow. Options A, B, and D do not accurately represent the default container statuses within SOAR, making option C the correct answer.
containers are the top-level data structure that SOAR playbook APIs operate on. Containers can have different statuses that indicate their state and progress in the SOAR workflow. Without customizing container status within SOAR, the three types of status for a container are:
*New: The container has been created but not yet assigned or investigated.
*In Progress: The container has been assigned and is being investigated or automated.
*Closed: The container has been resolved or dismissed and no further action is required.
Therefore, option C is the correct answer, as it lists the three types of status for a container without customizing container status within SOAR. Option A is incorrect, because Resolved is not a type of status for a container without customizing container status within SOAR, but rather a custom status that can be defined by an administrator. Option B is incorrect, because Low, Medium, and High are not types of status for a container, but rather types of severity that indicate the urgency or impact of a container. Option D is incorrect, for the same reason as option B.
1: Web search results from search_web(query="Splunk SOAR Automation Developer container status")

NEW QUESTION # 24
.....

The Benefits of SPLK-2003 Certification

A fantastic idea hits you, According to the data, the general pass rate for SPLK-2003 Practice Test questions is 98%, which is far beyond that of others in this field.

We provide the best SPLK-2003 questions torrent to you and don't hope to let you feel disappointed, For instance, you can begin your practice of the SPLK-2003 guide materials when you are waiting for a bus or you are in subway with the PDF version.

With our SPLK-2003 exam questions for 20 to 30 hours, you will find that you can pass the exam with confidence, However, it is an indisputable fact that a large number of people fail to pass the SPLK-2003 examination each year.
