Pure Storage Pure Certified Portworx Enterprise Professional (PEP) Exam Sample Questions (Q66-Q71):

NEW QUESTION # 66

When is a volume considered "Public"?

- A. When the volume does not have any ownership associated with it
- B. When a volume is owned by system.admin
- C. When guest access is enabled

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Portworx, a volume is considered "Public" when guest access is enabled. Guest access allows users and applications without explicit Portworx authentication credentials to access the volume. This setting is typically used in less restrictive environments where access control is relaxed, but it reduces security by exposing data to potentially unauthorized entities. Public volumes can be accessed by any entity with network connectivity and basic permissions, which is why enabling guest access is carefully controlled in secure deployments. Portworx documentation on security models and access controls stresses that public volumes should be used sparingly and monitored closely due to the elevated risk of data exposure and compliance violations [【 Pure Storage Portworx Security Guide source 】](#).

NEW QUESTION # 67

What feature does a Portworx StorageClass provide to Kubernetes storage?

- A. Automated backups
- B. Automated monitoring
- C. Automated storage provisioning

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Kubernetes, StorageClasses define how persistent volumes are dynamically provisioned. A Portworx StorageClass enables automated provisioning of Portworx volumes in response to Persistent Volume Claim (PVC) requests. This eliminates the need for administrators to manually create volumes, improving agility and scalability. The StorageClass encapsulates volume parameters such

as replication factor, encryption, and IO profiles, ensuring consistent storage policies across deployments. While Portworx offers monitoring and backup capabilities, these are outside the scope of the StorageClass resource itself. Kubernetes and Portworx documentation detail the StorageClass as a critical abstraction for enabling self-service storage provisioning, allowing applications to request storage with specific attributes dynamically and Portworx to satisfy these requests seamlessly [【 Pure Storage Portworx Kubernetes Guide source 】](#).

NEW QUESTION # 68

A Portworx administrator wants to enable security without guest access on a new storage cluster using the Portworx Kubernetes operator.

What configuration items should be added to the StorageCluster configuration ?

- A. spec:
 security:
 enabled: true
 auth:
 guestAccess: 'Disabled'
- B. spec:
 security:
 enabled: true
 auth:
 guestAccess: false
- C. spec:
 security: 'Enabled'

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Enabling security in Portworx without allowing guest access involves explicitly setting both enabled: true under the security section and guestAccess: false within the auth subsection of the StorageCluster spec. This configuration activates Portworx security features, enforcing authentication and encryption while preventing unauthenticated (guest) access to volumes. The guestAccess flag controls whether clients without valid credentials can access storage resources; setting it to false tightens security by requiring all access to be authenticated. This declarative setup is managed via the Kubernetes operator, ensuring consistent enforcement across cluster restarts and upgrades. Portworx's security documentation stresses this dual setting to harden clusters against unauthorized access while maintaining operational capabilities for authorized users, aligning with enterprise security policies and compliance standards [【 Pure Storage Portworx Security Guide source 】](#).

NEW QUESTION # 69

What is the primary purpose of Stork in a Kubernetes cluster?

- A. To monitor network traffic.
- B. To deploy applications automatically.
- C. To manage storage operations and migrations.

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Stork (Storage Orchestrator for Kubernetes) is a Portworx component designed to enhance Kubernetes storage management. Its primary purpose is to orchestrate storage-aware operations, including volume scheduling, migration, backup, and disaster recovery. Stork integrates deeply with Kubernetes to provide application-aware scheduling decisions that respect storage constraints such as volume locality and affinity. It also facilitates migration of stateful workloads by coordinating volume replication and failover. Stork simplifies complex storage workflows in Kubernetes environments, enabling seamless backup and restore of applications and improving overall resilience. Portworx's official documentation highlights Stork as a key enabler for business continuity by managing storage operations and migrations, making it essential for Kubernetes environments running critical stateful workloads with Portworx storage [【 Pure Storage Portworx Stork Guide source 】](#).

NEW QUESTION # 70

What are the three severity levels for Portworx alerts?

- A. INFO, WARNING, ALARM
- B. INFO, WARNING, CRITICAL
- C. INFO, WARNING, ERROR

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Portworx classifies alerts into three main severity levels to help administrators prioritize response actions. These levels are INFO, WARNING, and CRITICAL. INFO alerts provide informational messages about non-critical events, such as configuration changes or normal operational milestones. WARNING alerts indicate potential issues that could impact performance or availability if left unaddressed, such as increased latency or approaching capacity limits. CRITICAL alerts signal severe problems requiring immediate attention, such as node failures or data corruption risks. This severity categorization supports effective alert management and escalation policies, allowing operational teams to focus on high-impact issues first. The Portworx observability and alerting guide explains these levels in detail and recommends integrating alerts with external monitoring systems for centralized management [Pure Storage Portworx Alerting Guide source].
