overcome your shortcomings and become a persistent person. Just come and buy our C_BCSBS_2502 learning guide!

SAP C_BCSBS_2502 Exam Syllabus Topics:

| Topic | Details |
|---------|--|
| Topic 1 | <ul style="list-style-type: none">Positioning SAP Business Suite: This section of the exam measures the skills of Solution Consultants and covers how to effectively position the SAP Business Suite within various business scenarios. It includes understanding the core value, capabilities, and strategic advantages of SAP's integrated business applications. The focus is on enabling consultants to align SAP Business Suite offerings with customer needs to support end-to-end processes. |
| Topic 2 | <ul style="list-style-type: none">Positioning SAP Business Data Cloud: This section of the exam measures the skills of Enterprise Architects and covers the positioning and strategic use of SAP Business Data Cloud. It involves understanding how data from various sources is managed, governed, and accessed to support intelligent business operations. The section aims to equip professionals with the ability to explain data unification and connectivity through SAP's cloud-based data platform. |
| Topic 3 | <ul style="list-style-type: none">Discovering SAP Business AI: This section of the exam measures the skills of Digital Transformation Specialists and focuses on exploring how SAP Business AI enables smarter decision-making. It includes identifying AI-driven features embedded within SAP solutions and how they contribute to automation, predictions, and enhanced business outcomes. Professionals are expected to understand how to promote AI adoption in business processes using SAP's intelligent technologies. |

SAP Certified Associate - Positioning SAP Business Suite Sample Questions (Q20-Q25):

NEW QUESTION # 20

For installed base customers, what can RISE with SAP journeys include? Please choose the correct answer.

- A. A hybrid two-tier approach**
- B. Moving directly to public cloud without any intermediate steps
- C. Starting fresh with a greenfield ERP implementation on private cloud
- D. Leveraging RISE with SAP methodology to drive complex core principles

Answer: A

NEW QUESTION # 21

A multinational company is struggling with fragmented data across different departments, leading to inefficiencies in finance, procurement, and supply chain operations. They need an SAP solution that integrates these business processes into a unified system with real-time data access. Which SAP solutions should they implement? There are 3 correct answers to this question.

- A. SAP Ariba
- B. SAP BusinessObjects**
- C. SAP SuccessFactors
- D. SAP S/4HANA**
- E. SAP ERP**

Answer: B,D,E

NEW QUESTION # 22

What is the key advantage of SAP data products?

- A. Consistency and business context embedded in SAP-managed dataset and semantics**
- B. Ready-to-run insights that leverage planning and analysis
- C. Self-service analytical modeling within a data fabric architecture

Answer: A

Explanation:

SAP data products are standardized, curated datasets within SAP Business Data Cloud (BDC) that encapsulate business data with embedded semantics and context, designed to enable advanced analytics, AI, and seamless data sharing across SAP and non-SAP systems. The question asks for the key advantage of SAP data products, with one correct answer. Below, each option is evaluated based on official SAP documentation, SAP Learning materials, and relevant web sources from the provided search results, ensuring alignment with the "Positioning SAP Business Suite" and "SAP Business Data Cloud" narratives.

* Option A: Consistency and business context embedded in SAP-managed dataset and semantics
The primary advantage of SAP data products is their ability to provide consistency and embedded business context within SAP-managed datasets and semantics. These data products are pre-curated, semantically rich datasets that preserve the business meaning and context of data from SAP applications (e.g., SAP S

/4HANA, SAP SuccessFactors) and integrate with non-SAP data. This ensures that data is consistent, trusted, and ready for analytics and AI without requiring extensive re-engineering or external transformation. The documentation explicitly highlights this as the key advantage, emphasizing how SAP data products eliminate the need to rebuild business logic and maintain data integrity across use cases. Extract: "SAP Business Data Cloud offers several capabilities for connecting and harmonizing data. By leveraging an SAP-managed Lakehouse, users can maintain rich business semantics for SAP- sourced data products right out-of-the-box. ... Data products are curated and managed by SAP, ensuring consistency and business context for advanced analytics and AI." Extract: "Built-In Business Semantics: Because SAP data already carries deep business context and semantics, Databricks can provide powerful analytics and machine learning without forcing customers to re-invent data pipelines or guess at the meaning of fields." Extract: "SAP data products provide a consistent, semantically rich foundation for data sharing, ensuring that business context is preserved across SAP and non-SAP systems, reducing complexity and enabling trusted insights." This option is correct.

* Option B: Ready-to-run insights that leverage planning and analysis
While SAP Business Data Cloud provides ready-to-run insights through its Intelligent Applications, which combine planning and analysis, this is a feature of the broader SAP BDC platform, not a specific advantage of SAP data products. SAP data products are the underlying datasets that feed these applications, but their primary role is to provide a consistent, semantically rich data foundation, not to deliver insights directly. The documentation distinguishes between data products (data layer) and intelligent applications (analytics layer), making this option less accurate as the key advantage. Extract: "New to SAP Business Data Cloud (SAP BDC) are context-aware SAP Business Data Cloud Intelligent Applications. These pre- configured dashboards provide ready-to-run insights by combining planning and analysis, all infused with trusted Artificial Intelligence (AI) to drive smarter, faster decisions." This option is incorrect.

* Option C: Self-service analytical modeling within a data fabric architecture
SAP Business Data Cloud supports self-service analytical modeling through SAP Datasphere, which operates within a data fabric architecture to enable business users to create data models. However, this capability is not a primary advantage of SAP data products themselves. SAP data products are focused on delivering curated, SAP- managed datasets with embedded semantics, not on enabling self-service modeling. The data fabric architecture is a broader feature of SAP BDC, and self-service modeling is a function of tools like SAP Datasphere, not the data products. Extract: "SAP Datasphere: This works as central component in BDC by creating consumption ready data models on top of Data Products while also managing analytical roles, access controls etc." This option is incorrect.

Summary of Correct answer:

* A: The key advantage of SAP data products is their consistency and business context embedded in SAP- managed datasets and semantics, ensuring trusted, semantically rich data for analytics and AI without the need for external re-engineering.
