Salesforce MuleSoft-Integration-Associate Exam | MuleSoft-Integration-Associate資格試験 - 合格するのを確認する MuleSoft-Integration-Associate: Salesforce Certified MuleSoft Integration Associate Exam 試験

MuleSoft-Integration-Associateの試験問題は頻繁に更新され、十分な数のテストバンクを取得して、理論と実践の傾向を追跡できることが保証されます。つまり、MuleSoft-Integration-Associateトレーニング資料は多くの利点を高め、MuleSoft-Integration-Associateガイド急流をよりよく理解するためです。MuleSoft-Integration-Associate実践ガイドを購入して、私たちSalesforceを信頼してください。それでも私たちを完全に信じられない場合は、MuleSoft-Integration-Associate学習質問の機能と機能の紹介をお読みください。

Salesforce Certified MuleSoft Integration Associate Exam 認定 MuleSoft-Integration-Associate 試験問題 (Q25-Q30):

質問 # 25

According to MuleSoft what is a major distinguishing characteristic of an application network in relation to the integration of systems, data, and devices?

- A. It uses CI/CD automation for real-time project delivery
- B. It leverages well-accepted internet standards like HTTP and JSON
- **C. It is built for change and self-service**
- D. It uses a well-organized monolithic approach with standards

正解: C

解説:

An application network, as envisioned by MuleSoft, is designed to be dynamic and self-service, enabling rapid adaptation to changing business needs. Here's a detailed explanation:

* Built for Change:

* Flexibility: An application network allows for the easy addition, modification, and removal of services without disrupting existing functionalities.

* Modular Architecture: Promotes a modular approach where services and APIs can be independently developed, deployed, and managed.

* Self-Service:

* Empowerment: Enables different teams (e.g., developers, business units) to access and use APIs and services without heavy reliance on central IT.

* API-led Connectivity: Facilitates a self-service model where reusable APIs are available for various teams to integrate and build upon, accelerating innovation and reducing time-to-market.

* Characteristics:

* Decentralization: Unlike monolithic architectures, an application network supports decentralized development and deployment.

* Reusability and Discoverability: Services and APIs are designed to be easily discoverable and reusable across different parts of the organization.

質問 # 26

Which key DevOps practice and associated Anypoint Platform component should a MuleSoft integration team adopt to improve delivery quality?

- A. Continuous design with API Designer
- B. Manual testing with Anypoint Studio
- **C. Automated testing with MUnit**
- D. Passive monitoring with Anypoint Monitoring

正解: C

解説:

To improve delivery quality, a key DevOps practice is automated testing. Within the Anypoint Platform, MUnit is the tool specifically designed for this purpose. Here's a step-by-step explanation:

* Automated Testing:

* Definition: Automated testing involves using software tools to execute tests on the application automatically, ensuring that the code works as expected.

* Benefits: It increases efficiency, consistency, and coverage of tests, reducing the risk of human error.

* MUnit:

* Integration Testing: MUnit is MuleSoft's integrated testing framework for applications built with Anypoint Studio. It allows developers to create and run tests for Mule applications, ensuring they function correctly.

* Features:

* Test Cases: Create comprehensive test cases to validate various parts of the Mule application.

* Mocking: Mock external systems and dependencies, enabling isolated testing of application components.

* Assertions: Validate the behavior of Mule flows with assertions.

* Implementation Steps:

* Design Tests: Within Anypoint Studio, design MUnit tests to cover different scenarios and edge cases of the Mule flows.

* Run Tests: Execute these tests automatically during the CI/CD pipeline to ensure that new code changes do not break existing functionality.

* Continuous Integration: Integrate MUnit tests with CI tools like Jenkins, Bamboo, or GitLab CI for continuous testing.

References

* MuleSoft Documentation: MUnit

質問 # 27

An organization is not meeting its growth and innovation objectives because IT cannot deliver projects fast enough to keep up with the pace of change required by the business.

According to MuleSoft's IT delivery and operating model which step should the organization take to solve this problem?

- A. Modify IT governance and security controls so that line of business developers can have direct access to the organization's systems of record
- **B. Adopt a new approach that decouples core IT projects from the innovation that happens within each line of business**
- C. Hire more IT developers, architects, and project managers to increase IT delivery
- D. Switch from a design-first to a code-first approach for IT development

正解: B

解説:

MuleSoft's IT delivery and operating model suggests modernizing IT practices to better support business growth and innovation. Here's a detailed explanation:

* Decoupling Core IT Projects:

* Definition: Decoupling involves separating the core IT systems and projects from the innovative and experimental projects conducted by various lines of business.

* Benefits:

* Agility: Enables lines of business to innovate rapidly without being held back by the constraints of core IT systems.

* Focus: Allows core IT to focus on maintaining and enhancing critical systems while business units can experiment and deploy new solutions more quickly.

* Implementation:

* API-led Connectivity: By using an API-led connectivity approach, core IT can expose reusable APIs and services that business units can leverage for their innovation efforts.

* Governance and Security: Ensuring that proper governance and security measures are in place to protect core systems while allowing flexibility for innovation.

* Outcome:

* Faster Delivery: Speeds up the delivery of new features and solutions, aligning with business needs and market demands.

* Enhanced Collaboration: Facilitates better collaboration between IT and business units, driving overall organizational growth.

質問 # 28

Which component of Anypoint Platform belongs to the platform control plane?"

- **A. API Manager**
- B. Runtime Replica
- C. Anypoint Connectors
- D. Runtime Fabric

正解: A

解説:

In Anypoint Platform, the control plane is responsible for managing and controlling the various components and services that make up the platform. API Manager is part of the control plane, providing centralized management of APIs. Here's a detailed explanation:

* Control Plane:

* Definition: The control plane in Anypoint Platform is responsible for the management, monitoring, and control of APIs, applications, and other platform resources.

* Components: Includes tools for API management, analytics, security, and governance.

* API Manager:

* Purpose: Allows users to manage API policies, monitor API usage, and secure APIs. It provides a centralized interface for managing the entire lifecycle of APIs.

* Features:

* Policy Enforcement: Apply security policies, rate limiting, and other governance rules.

- * Analytics and Monitoring: Track API performance, usage statistics, and detect anomalies.
- * Access Control: Manage user access and permissions for APIs.

References

- * MuleSoft Documentation: API Manager
- * Anypoint Platform Overview: Anypoint Platform

質問 # 29

An integration architect is designing an API that must accept requests from API clients for both XML and JSON content over HTTP/1.1 by default.

Which API architectural style when used for its intended and typical purposes, should the architect choose to meet these requirements?

- A. SOAP
- B. gRPC
- C. REST
- D. GraphQL

正解: C

解説:

REST (Representational State Transfer) is an architectural style commonly used for designing networked applications, particularly APIs that need to handle multiple content types over HTTP. Here's a detailed explanation:

* Content Negotiation:

* Definition: REST APIs support content negotiation, allowing clients to request either XML or JSON formats by setting the Accept header in HTTP requests.

* Flexibility: This capability makes REST ideal for scenarios where an API needs to serve multiple content types.

* HTTP Protocol:

* Usage: REST APIs operate over HTTP/1.1, making them compatible with web standards and easily accessible by various clients (browsers, mobile apps, etc.).

* Methods: Supports standard HTTP methods like GET, POST, PUT, DELETE, allowing for CRUD operations.

* Advantages:

* Stateless: Each request from a client to server must contain all the information needed to understand and process the request.

* Scalability: RESTful services can handle a high load of requests efficiently.
