Microsoft MB-820 VCE Dumps & Testking IT echter Test von MB-820

Die Fragenpool zur Microsoft MB-820 Zertifizierungsprüfung von ITZert werden nach dem gleichen Lernplan bearbeitet. Wir aktualisieren auch ständig unsere Fragenpool, die Prüfungsfragen und Antworten enthalten. Weil unsere Prüfungen den echten Prüfungen sehr ähnlich sind, ist unsere Erfolgsquote auch sehr hoch. Diese Tatsache ist nicht zu leugnen, Unsere Fragenpool zur Microsoft MB-820 Zertifizierung können den Kandidaten sehr helfen. Und unser Preis ist ganz rational, was jedem IT-Kandidaten passt.

Microsoft Dynamics 365 Business Central Developer MB-820 Prüfungsfragen mit Lösungen (Q32-Q37):

32. Frage

A company has a page named New Job Status connected to a source table named Job. The page has an action named Item Ledger Entries. The company requires the following changes to the page:

- * Filter the page to display only jobs with open or quote status.
- * Add the following comment for internal use: This page does not include completed jobs.
- * Item Ledger Entries action must open the selected job on the page and display it in the UI for users to modify.

You need to select the property selections to use for each requirement.

Which property selections should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Page modifications

Requirement	Property selection
Display status of open or quote.	<input type="checkbox"/> SourceTableView = sorting(Status) order(ascending) <input type="checkbox"/> SourceTableView = where(Status = filter(Open Quote Planning)); <input type="checkbox"/> SourceTableView = where(Status = filter(Open Quote));
Add a comment for internal use.	<input type="checkbox"/> Description = 'This page does not include completed jobs'; <input type="checkbox"/> ToolTip = 'This page does not include completed jobs';
Action must open selected job on the page.	<input type="checkbox"/> RunPageLink = "Job No." = FIELD("No."); <input type="checkbox"/> RunPageView = "Job No." = FIELD("No.");

Antwort:

Begründung:

Requirement	Property selection
Display status of open or quote.	<input type="checkbox"/> SourceTableView = sorting(Status) order(ascending) <input type="checkbox"/> SourceTableView = where(Status = filter(Open Quote Planning)); <input checked="" type="checkbox"/> SourceTableView = where(Status = filter(Open Quote));
Add a comment for internal use.	<input type="checkbox"/> Description = 'This page does not include completed jobs'; <input checked="" type="checkbox"/> ToolTip = 'This page does not include completed jobs';
Action must open selected job on the page.	<input type="checkbox"/> RunPageLink = "Job No." = FIELD("No."); <input checked="" type="checkbox"/> RunPageView = "Job No." = FIELD("No.");

33. Frage

You create a page with the PageType property set to RoleCenter.

You navigate through the different sections of the page.

You need to add functionalities to the page.

What should you do?

- A. Add a source table on the Role Center page.
- B. Define the navigation bar in the area (embedding).
- **C. Define actions in the area (reporting) before actions in the area (creation).**
- D. Define the navigation menu in the area (processing).

Antwort: C

Begründung:

When creating a page with the PageType property set to RoleCenter in Microsoft Dynamics 365 Business Central, it's essential to

organize the functionalities and actions in a manner that enhances user experience and efficiency. The best practice is to define actions in the area (reporting) before actions in the area (creation) (A). This organization allows users to access reporting and analytical features quickly, which are commonly used in Role Centers for overview and insight purposes, before moving on to creation or transactional tasks. This logical flow aligns with typical user workflows, where analysis and review precede the creation of new records or transactions. The other options, such as defining the navigation menu in the area (processing) (B), defining the navigation bar in the area (embedding) (C), or adding a source table on the Role Center page (D), do not directly address the need to add functionalities to the Role Center page in a user-friendly manner.

34. Frage

You need to handle the removal of the Description field and the Clone procedure without breaking other extensions. Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

NOTE: More than one order of answer choices is correct. You will receive credit for any of the correct orders you select.

Set the Description field as ObsoleteState = Removed; in version 2.0.0.1.	<input type="checkbox"/>
Remove the Description field in version 2.0.0.0.	<input type="checkbox"/>
Set the Clone procedure as ObsoleteState = Removed; in version 2.0.0.1.	<input type="checkbox"/>
Remove the Clone procedure in version 2.0.0.0.	<input type="checkbox"/>
Set the Clone procedure as ObsoleteState = Pending and ObsoleteReason = 'Not in use' in version 2.0.0.0.	<input type="checkbox"/>
Set the Description field as ObsoleteState = Pending and ObsoleteReason = 'Not in use' in version 2.0.0.0.	<input type="checkbox"/>
Remove the Description field from the Issue table in version 2.0.0.1.	<input type="checkbox"/>
Add the [Obsolete{xxx}] attribute to the Clone procedure in version 2.0.0.0.	<input type="checkbox"/>

Antwort:

Begründung:

Answer Area

Set the Description field as OBsoleteState....2.0.0.0.
Set the Clone procedure as ObsoleteState.1.2.0.0.0.
Remove the Description field from the issue table in version 2.0.0.1.

- 1 - Set the Description field as OBsoleteState....2.0.0.0.
- 2 - Set the Clone procedure as ObsoleteState....2.0.0.0.
- 3 - Remove the Description field from the issue table in version 2.0.0.1.

35. Frage

You need to define the properties for the Receipt No. field in the Non-conformity table when storing the information to the purchasing department How should you complete the code segment? To answer, select the appropriate options in the answer area. NOTE; Each correct selection is worth one point.

TableRelation property

```
field(3;"Receipt No."; Code[20])
```

```
{
```

```
DataClassification = CustomerContent;
```

```
TableRelation = "Purch. Rcpt. Header"."No." where (
```

- TableRelation
- CalcFormula
- FieldRelation
- Relationship
- TableRelation

- Buy-from Vendor No.
- Buy-from Vendor Name
- Buy-from Vendor No.
- Sell-from Vendor No.
- Vendor No.

```
= field ("Vendor No."));
```

```
= const
```

```
= filter
```

```
= field
```

```
= lookup
```

Antwort:

Begründung:

Explanation:

```
field(3; "Receipt No."; Code[20])
```

```
{
```

```
DataClassification = CustomerContent;
```

```
TableRelation = "Purch. Rcpt. Header"."No." where ("Buy-from Vendor No." = field("Vendor No."));
```

```
}
```

TableRelation property

```
field(3;"Receipt No."; Code[20])
```

```
{
```

```
DataClassification = CustomerContent;
```

```
TableRelation = "Purch. Rcpt. Header"."No." where ( "Buy-from Vendor No." =
```

```
= field ("Vendor No."));
```

```
}
```

* Field Declaration:

* The field(3; "Receipt No."; Code[20]) part defines the field in the table with ID 3 and type Code with a length of 20. This field will hold the receipt number.

* DataClassification:

* CustomerContent is selected for the DataClassification property, which categorizes the data for privacy and compliance management. This aligns with Business Central's recommendations for handling sensitive data in customer-related tables.

* TableRelation Property:

* The TableRelation property links the "Receipt No." field to another table, which in this case is the "Purch. Rcpt. Header" table. This ensures that only valid receipt numbers from the Purchase Receipt Header table can be selected or entered in this field.

* Relation Filter:

- * The filter condition is applied using the where clause. It ensures that the Receipt No. is only from the Purchase Receipt Header records where the "Buy-from Vendor No." matches the "Vendor No." of the current record.
 - * The condition field("Vendor No.") is selected from the drop-down as shown in the image. This links the vendor information in the non-conformity table to the receipt in the Purchase Receipt Header table.
 - * By linking the "Vendor No." fields, you ensure that only receipt numbers from the correct vendor are available, which improves data consistency and reduces errors during data entry.
 - * References to AL Language:
 - * The TableRelation property is frequently used to create references between tables in Business Central. In this case, the correct relationship between the "Purch. Rcpt. Header" and the Non- conformity table is established using the TableRelation and filter.
- Reference Documentation:
- * AL TableRelation Property
 - * AL Field Syntax

36. Frage

You are developing an XMLport to export data from the parent Item table and a related child 'Item Unit of Measure' table. The XMLport configuration must provide the following:

- * Link the child table to its parent.
- * Display a confirmation message after the XMLport runs.

You need to generate the XMLport.

What should you do? To answer, move the appropriate triggers to the correct requirements. You may use each trigger once, more than once, or not at all. You may need to move the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Antwort:

Begründung:

Explanation:

To meet the XMLport configuration requirements:

- * Link the child table to its parent: Use the OnAfterGetRecord trigger.
- * Display a confirmation message after the XMLport runs: Use the OnPostXMLPort trigger.

In Business Central, when you are developing an XMLport for data export, triggers are used to perform actions at different stages of the XMLport's operation:

- * OnAfterGetRecord Trigger: This trigger fires after a record is retrieved from the database but before it is processed for output in the XMLport. It is the ideal place to link child table records to their parent because you have access to the current record that can be used to set filters or modify data in the child table before it is written to the XML file.
- * OnPostXMLPort Trigger: This trigger fires after the XMLport has finished processing all records. It is the correct place to display a confirmation message because it ensures that the message will appear after the entire XMLport operation is complete. Here, you can use application-specific functions to show the message, such as MESSAGE function in AL code.

By placing the appropriate triggers in these positions, you can ensure that the XMLport will link the child records to their parent records during the data export process and will notify the user with a confirmation message once the operation is successfully completed.

37. Frage

.....

ITZert setzt sich aus den riesigen IT-Eliteteams zusammen. Sie alle haben hohe Autorität im IT-Bereich. Sie nutzen professionelle Kenntnisse und Erfahrungen aus, um den an den Microsoft MB-820 Zertifizierungsprüfungen beteiligten Kandidaten die Prüfungsunterlagen zu bieten. Die Genauigkeit von Microsoft MB-820 Fragen Und Antworten aus ITZert ist sehr hoch. Wir versprechen, dass Sie die Prüfung beim ersten Versuch 100% bestehen können. Außerdem stehen wir Ihnen einen einjährigen Update-Service zur Verfügung.
