精準覆蓋的220-1101熱門證照 |高通過率的考試材料|快速下載220-1101: CompTIA A+ Certification Exam: Core 1

NewDumps提供高品質的最佳學習資料，讓通過CompTIA 220-1101考試從未如此快速、便宜、和簡單。有了最新詳細的題庫和答案，為您的220-1101考試做好充分的準備，我們將保證您在考試中取得成功。在購買前，您還可以下載我們提供的220-1101免費DEMO來試用，這是非常有效的學習資料。通過客戶的完全信任，我們為考生提供真實有效的訓練，幫助大家在第一次CompTIA 220-1101考試中順利通過。

CompTIA A+ 認證考試：基礎 1 (220-1101) 涵蓋了廣泛的主題，包括硬件、網絡、移動設備、虛擬化和雲計算以及疑難排解。考試旨在測試候選人在安裝、配置和維護計算機硬件和軟件方面的知識和技能。考試還涵蓋了網絡的基本原理，包括 TCP/IP、DNS、DHCP 和無線網絡。此外，考試還包括虛擬化和雲計算等最新技術的最新趨勢。

最新的 A+ 220-1101 免費考試真題 (Q836-Q841):

問題 #836

Which of the following is the SAFEST way to replace RAM on a server that has a redundant power supply?

- A. Verify the RAM temperature.
- B. Replace the RAM while the server is running.
- C. Unplug one power cable.
- **D. Utilize a grounding strap.**

答案： D

解題說明：

Utilizing a grounding strap is the safest way to replace RAM on a server that has a redundant power supply.

This is because the grounding strap prevents electrostatic discharge (ESD) when handling the RAM, which can cause damage to the RAM and the server. Therefore, it is important to always use a grounding strap when handling RAM or other sensitive components.

問題 #837

A sales team user is attending a conference and wants a mobile device that allows the user to quickly collect contact information from as many potential leads as possible. Which of the following connection methods should a technician configure for the user?

- A. Bluetooth
- B. USB
- **C. NFC**
- D. RFID

答案： C

解題說明：

Near Field Communication (NFC) is the most suitable connection method for the user's need to quickly collect contact information. NFC allows for short-range communication between compatible devices by simply bringing them close together or tapping them together. This feature is ideal for exchanging contact information or transferring small amounts of data quickly and conveniently, making it perfect for a sales environment at a conference. This recommendation is supported by the CompTIA A+ Core 1 (220-1101) Exam Objectives, specifically in sections 2.3 "Compare and contrast protocols for wireless networking" and 1.3 "Given a scenario set up and configure accessories and ports of mobile devices", where NFC is mentioned as a connection method for mobile devices .

問題 #838

A technician needs to install a printer on the network. Which of the following must the technician configure? (Select THREE).

- A. Drivers
- **B. Subnet mask**
- C. MB
- D. Dots per inch
- E. MAC address
- **F. Gateway**
- **G. IP address**
- H. PCL

答案： B,F,G

解題說明：

Explanation

When installing a printer on a network, the technician needs to configure the network settings, which include the IP address, subnet mask, and gateway. These settings are used to ensure that the printer can communicate with other devices on the network.

When installing a printer on a network, the technician must configure the network settings of the printer to ensure that it can communicate with other devices on the network. This includes configuring the gateway, subnet mask and IP address of the printer. The gateway is the device that connects the local network to other networks or the Internet. The subnet mask is used to determine which part of an IP address represents the network and which part represents individual hosts on that network. The IP address is a unique identifier for each device on a network.

問題 #839

Which of the following network devices should a technician install in order to isolate voice traffic on the network?

- **A. Managed switch**
- B. Hub
- C. DSL filter
- D. Network tap

答案： A

解題說明：

Explanation

A managed switch is a network device that can be configured to create VLANs (Virtual Local Area Networks), which are logical segments of a network that isolate traffic based on criteria such as function, security, or quality of service. A VLAN can be used to isolate voice traffic on the network, which can improve the performance and security of voice over IP (VoIP) applications. A network tap, a hub, and a DSL filter are not capable of creating VLANs.

問題 #840

A technician is troubleshooting an unresponsive touchscreen on a smartphone. The technician performs a hard reset, but the touchscreen remains unresponsive. Which of the following is the most likely cause of the issue?

- **A. Damaged digitizer**
- B. Low battery
- C. Missing drivers
- D. Virus infection

答案： A

解題說明：

The digitizer is a crucial component of a touchscreen device, responsible for translating touch actions into digital signals that the device can interpret. If a hard reset does not resolve the touchscreen's unresponsiveness, it's likely that the digitizer is damaged. Physical damage, such as cracks or heavy impacts, can impair the digitizer's ability to function correctly, leading to an unresponsive touchscreen. This type of hardware issue requires professional repair or replacement of the touchscreen assembly to restore functionality. Reference: Mobile Devices 1101.docx, "Touchscreen Technology" section.
